

Regional Needs Assessment

REGION VIII: PREVENTION RESOURCE CENTER
PROGRAM OF THE SAN ANTONIO COUNCIL ON ALCOHOL AND
DRUG AWARENESS (SACADA)

South Texas Centre - Dave Coy Building
7500 Hwy 90 West, Suite 201 | San Antonio, TX 78227
(210) 225-4741 | www.sacada.org

Dear Region 8 Partners,

We are excited to share the 2024 Regional Needs Assessment (RNA) Report. We know that this report will be a great resource throughout the 28 counties in region 8. The purpose of the RNA is to gather data that tells the story of gaps, needs, and risk factors that keep a community from thriving. Once the gaps and needs are identified leaders can determine what the best strategies are to improve the conditions of the community and its residents. For example, if there are high Driving While Intoxicated (DWI) arrests we know that it increases Adverse Childhood Experiences (ACEs) for children in a home where a parent struggles with substance use and is arrested for DWI. Because of the data, we know that addressing the risk-factor of DWIs will be important and a priority. Determining best practice for the specific community will be the next step. Utilizing evidence-based practices (EBPs) help us know that the programs and activities we are implementing will have a high rate of success since they have been proven by research.

I believe we continue to experience the ripple effects of Covid in our communities. It is concerning that our youth drug-related arrest rates have gone up by 9%. Another huge concern is that our youth continue to have access to illegal drugs, with nearly 1 in 5 Texas students being offered or given an illegal drug on school property. (RNA 2024)

However, we have some great news. Nonprofits and our community leaders continue to be relentless as the needs of our communities increase. We are committed to positive outcomes and community health.

The goal is for non-profits, city governments, schools, and other key stakeholders to use the findings from the RNA to develop strategic plans to reduce the risk factors and increase the protective factors in a community for public safety and health.

We look forward to providing continued conversations and support on the best way to use the report. Please stay in contact with our PRC team for upcoming events and new info-graphs to help tell the story from the data. As always, we are here to serve.

Sincerely,

A handwritten signature in black ink that reads "Abigail G. Moore".

Acknowledgements

The San Antonio Council on Alcohol and Drug Awareness' Region 8 Prevention Resource Center would like to express our deepest appreciation to all who aided and supported us in producing the Regional Needs Assessment. It was only with the provision of your time, advice, and efforts that this document's completion was made possible.

We would like to give heartfelt thanks and appreciation to the Texas Health and Human Services Commission for their tremendous efforts in coordinating this task among all eleven Prevention Resource Centers across the state. Additionally, we extend a special thank you to the Circles of San Antonio Community Coalition, whose encouragement and involvement in stimulating suggestions, was a significant pillar of support in gathering qualitative data and other crucial aspects of the Regional Needs Assessment.

Special thanks go to our partners at the Recovery Resource Council Region 3 Prevention Resource Center. The benefit of their guidance and recommendations on data analysis cannot be overstated. This Regional Needs Assessment would not be possible without the efforts of all eleven Data Coordinators, who worked to collect, analyze, and clean the quantitative data. Their teamwork and dedication to utilizing data with fidelity was paramount to the success and completion of this document.

Executive Summary

What is the Regional Needs Assessment (RNA)?

The Prevention Resource Center's (PRC) RNA is a document created by Region 8 PRC along with Data Coordinators from PRCs across the State of Texas and supported by Texas Health and Human Services Commission (HHSC). The Region 8 PRC serves 28 counties in South Central Texas.

A needs assessment is the process of determining and addressing the gaps that exist between the current conditions and desired conditions in a set environment or demographic.¹ This assessment was designed to aid PRCs, HHSC, and community stakeholders in long-term strategic prevention planning based on the most current information about the unique needs of Texas' diverse communities. This document will present summary statistics of risk, and protective factors associated with substance use, consumption patterns, and public health consequences. In addition, this report will offer insight on gaps in behavioral health promotion and substance use prevention services and data in Texas.

Who creates the RNA?

A team of Data Coordinators from all eleven PRCs has gathered national, state, regional, and local data through collaborative partnerships with diverse agencies from the CDC's twelve sectors for community change:

- Youth and young adults
- Parents
- Business communities
- Media
- Schools
- Organizations serving youth and young adults
- Law enforcement agencies
- Religious or fraternal organizations
- Civic or volunteer groups
- Healthcare professionals and organizations
- State, local, and tribal government agencies
- Other local organizations involved in promoting behavioral health and reducing substance use and non-medical use of prescription drugs, such as recovery communities, Education Services Centers, and Local Mental Health Authorities²

PRC Region 8 recognizes those collaborators who contributed to the creation of this RNA.

How is the RNA informed?

Qualitative data has been collected in the form of focus groups and interviews with key informants. Quantitative data has been collected from federal and state agencies to ensure reliability and accuracy. The information obtained through these partnerships has been analyzed and synthesized together in the form of this RNA.

² Centers for Disease Control and Prevention. (2021)

Main key findings from this assessment includes:

Demographics

The ACS 5-Year Population estimate for Region 8 is 3,039,996 persons, this makes it the 4th largest populated Region in Texas. Bexar County has the largest population in the region, with an estimated 2,014,059 persons. In Region 8, there is an estimated 1,519,597 males (50.0%) and 1,520,399 females (50.0%). Based on the population pyramid of Region 8 in Figure 15 below, the largest age group in the population is those aged 25-44 with 28.0 percent of the total population. The smallest age group in the population is those aged 18-24 with 10.0 percent of the total population.

According to the American Community Survey 5-year Estimates, 81.9 percent of Region 8 reported their race as White, 26.0 percent reported their race as "Other", 7.9 percent reported their race as Black, 3.4 percent reported their race as Asian, 2.2 percent reported their race as American Indian/Alaska Native, less than 1 percent of Region 8 reported their race to be Native Hawaiian/Pacific Islander. The majority of Region 8 identifies as Hispanic or Latino, with 56.1 percent of the population reporting as such.

Of Region 8, residents aged 5-years and older who speak a language other than English at home, 38.6 percent speak Spanish, 1.8 percent speak Indo-European languages, 1.9 percent speak Asian and Pacific Island languages, and 0.5 speak other languages.

Substance Use Behaviors

For Region 8, the juvenile drug arrest rate increased from 2019 to 2023 by 13.2 percent, from 203.9 arrests per 100,000 persons in 2019 to 230.9 arrests per 100,000 persons in 2023.

For Region 8, the adult alcohol-related arrest rate decreased from 2019 to 2023 by 67.9 percent, from 597.6 arrests per 100,000 persons in 2019 to 191.6 arrests per 100,000 persons in 2023. Additionally, in Region 8, the adult drug-related arrest rate decreased overall from 2019 to 2023 by 59.0 percent, from 955.1 arrests per 100,000 persons in 2019 to 391.3 arrests per 100,000 persons in 2023.

Marijuana accounted for the largest number of drugs seized in Region 8, which equates 1.6 percent of the state's total solid pounds and 9 percent of the state's solid ounces. Amphetamines ranked as the second highest drug seized accounting for 10.3 percent of the state's solid grams. Synthetic narcotic seizures ranked third highest accounting for 21.2 percent of the States total liquid ounces of synthetic narcotics.

In 2021, nearly 1 in 5 (17.4%) Texas students were offered or given an illegal drug on school property. In the 2022 TSS, Region 8 past month use for any alcohol product for all students surveyed in 7th- 12th grades were 24.7 percent. Region 8 past month use for any tobacco product for all students surveyed in 7th- 12th grades was 12.6 percent. Region 8 past month use for e-cigarette/vaping products for all students surveyed in 7th- 12th grades was 9.4 percent. Region 8 past month use for marijuana for all students surveyed in 7th- 12th grades was 13.7 percent. Region 8 past month use for illicit drugs for all students surveyed in 7th- 12th grades was 14.8 percent.

In 2022, 51.7 percent of adults reported past month alcohol use, 57.5 percent of males reported past month alcohol use and 45.9 percent of females reported so. In 2022, 16.5 percent of adults reported binge drinking, 21.7 percent of males reported binge drinking and 11.4 percent of females reported so.

The overdose death rate for Region 8 in 2023 was 18.7 deaths per 100,000 population, a decrease from 19.1 deaths per 100,000 persons in 2022. In 2023, the adolescent (individuals aged 15-24) overdose death rate for Region 8 was 8.7 per 100,000 persons. The rate of adolescent overdoses decreased slightly from 2022, to 8.9 per 100,000 persons.

In 2023, Region 8 had 119 people killed in motor vehicle traffic crashes where a driver was under the influence (DUI) of alcohol. The number of persons killed decreased 7.0% from 128 deaths in 2018. In 2023, the Region 8 rate of alcohol-related vehicular fatalities was 3.9 per 100,000 persons.

Underlying Risk Factors

The ACS 5-Year Estimated Per Capita Income for Texas is \$62,586. For Region 8, the estimated Per Capita Income is \$59,093, which is lower than that of Texas. From 2020 to 2023, the unemployment rates have declined for Texas and Region 8. The 2023 unemployment rate for Region 8 is 3.8 percent, lower than Texas rate of 3.9 percent.

In Region 8, there was an average of 13.3 students experiencing homelessness per 1,000 enrolled for the 2023-2024 school year.

According to the ACS 5-Year Estimates (2018-2022), over 400,000 (13.8%) young adults between the ages of 18-24 in Texas had less than a high school education, and in Region 8, over 41,000 (10.5%).

Between the years of 2018-2021, Region 8 has seen an increase of 8.1 percent in uninsured children. The uninsured children less than 19 years old in Region 8 ranged from 8.7 percent in Kinney County to 19.9 percent in Edwards County. Between the years of 2018-2021, Region 8 has seen an increase of 7.2 percent in uninsured adults. The percentage uninsured adults in Region 8 ranged from 16.8 percent in Comal County to 36.9 percent in Maverick County.

The 2023 Texas family violence rate was 687.1 incidents per 100,000 persons, while the Region 8 rate was much higher at 743.9 per 100,000 persons. From 2018 to 2023, Region 8 saw a 10.8 percent increase in the number of family violence incidents.

In 2023, Region 8 had a 4.8 percent decrease in the number of confirmed victims of maltreatment from 7074 or 958.5 per 100,000 children in 2022 to 6736 or 912.7 per 100,000 children.

The rates of foster children per 100,000 are much higher in Region 8 than in Texas, however they have decreased 40.6 percent from 2018 to 2023. In 2023, Region 8 had a rate of 310.8 children in foster care per 100,000 children.

In 2024, the rate for alcohol permits per 100,000 population in Region 8 was 242.9, higher than the Texas rate of 222.2. In 2024, Region 8 counties ranged from 177.9 permits per 100,000 population in Maverick to 695.9 permits per 100,000 in Gillespie. The 2024 Region 8 Tobacco Permit Density was 115.1 per 100,000 persons, lower than the Texas rate of 126.9. Counties ranged from 101.9 per 100,000 persons in Maverick to 580.13 in Real. The 2024 Region 8 E-Cigarette Permit Density was 71.6 per 100,000 persons, lower than the Texas rate of 80.6. Counties ranged from 44.1 per 100,000 persons in Val Verde to 217.6 in Real.

Behavioral Health Disparities

In Texas, the percentage of adults who report that a doctor, nurse, or other health professional has ever told them that they have a depressive disorder including depression, major depression, dysthymia, or minor depression is 22.8. In Region 8 counties, the percentage of adults reporting a depressive disorder remained similar throughout all areas. In La Salle County, 19.3 percent of adults reported this, while in Real County, 24.6 percent reported as such in 2021.

The percentage of adolescents in Texas that reported they felt sad or hopeless increased by 30.4 percent from 2017 to 2021. In 2021, 57.2 percent of female high school students reported that they felt sad or hopeless, while 32.1 percent of male high school students reported as such. Tenth grade had the highest percentage (48.3%) of sad or hopeless students in 2021 out of 9th-12th grades.

In Region 8, from 2018 to 2023, there were 229 deaths by suicide for children aged 10-19 years. In Texas, the total number of suicides from 2018 to 2023 was 1,809 for this age group. Region 8 had the third largest number of youth suicides of the eleven regions in Texas.

In 2022, Region 8 (233.1 per 100,000 persons) had a lower rate of individuals receiving SUD treatment than the Texas (341 per 100,000) rate. The total rate of individuals receiving SUD treatment has decreased by 56.4 percent from 2018 to 2022 in Region 8.

Protective Factors and Community Strengths

The rate of social associations per 10,000 persons has slowly declined in Region 8 between the years 2018-2024. In 2024, the rate of social associations in Region 8 is 6.9 per 10,000, which is a 0.1 percent decrease from 2018.

The rate of Schedule II drugs dispensed in Region 8 was 43,126.8 per 100,000 persons, lower than Texas rate of 45,176.8 per 100,000 persons in 2023. The rate of Schedule III drugs dispensed in Region 8 was 14,571.4 per 100,000 persons, lower than Texas' rate of 16,209.5 per 100,000 persons.

From 2018 to 2024, Texas has seen a 71.0 percent increase in mental health providers. In 2024, Region 8 had an average of 85.4 mental health providers per 100,000 persons.

In 2022, the Region 8 average graduation rate was 92.8% for all students. Economically disadvantaged students had a lower graduation rate for all years 2018 through 2022. The economically disadvantaged graduation rate in 2021 was lower at 90%.

In 2020, Region 8 had a rate of 85.4 congregations per 100,000 people. Additionally, within Region 8, Edwards County had a rate of 773.6 congregations per 100,000 people, while Bexar County had a rate of 64.9 congregations per 100,000.

In the 2022 TSS, students in Region 8 reported that they received education on drugs or alcohol from the following sources: a school health class (37.2%), an assembly program (40.4%), guidance counselor (31.3%), school nurse (17.9%), science/social studies class (28.4%), student group/club meeting at school (13.8%), an invited school guest (29.7%), another source at school (27.6), and any school source (64.2%).

Introduction

The information presented in this RNA aims to contribute to program planning, evidence-based decision making, and community education. The RNA strives to increase knowledge of factors related to substance use and behavioral health. There are several guiding key concepts throughout the RNA, including a focus on the youth and young adult population and the use of an empirical, public health framework. All key concepts are outlined within their own respective sections later in this report.

The information in this needs assessment is based on three main data categories:

1. exploration of related risk and protective factors as defined by The Center for Substance Abuse Prevention (CSAP);
2. exploration of drug consumption trends of adolescents with a primary focus on the state-delineated prevention priorities of alcohol (underage drinking), tobacco/nicotine, marijuana, and non-medical use of prescription drugs; and
3. broader public health and public safety consequences that result from substance use and behavioral health challenges.

The report concludes with a collection of prevention resources in the region, an overview of the region's capacity to address substance use and other behavioral health challenges, and overall takeaways from the RNA.

Prevention Resource Centers (PRCs)

PRCs are funded by the Texas Health and Human Services Commission (HHSC) to provide data and information related to substance use and to support prevention collaboration efforts in the community. There is one PRC located in each of the eleven Texas Public Health Service Regions (see Figure 1) to provide support to prevention providers located in their region with data, trainings, media activities, and regional workgroups.

PRCs focus on the state's overall behavioral health and the four prevention priorities:

- underage alcohol use;
- underage tobacco and nicotine products use;
- marijuana and other cannabinoids use; and
- non-medical use of prescription drugs.

PRCs have four fundamental objectives:

- collect data relevant to the state's prevention priorities, share findings with community partners, and ensure sustainability of a Regional Epidemiological Workgroup (REW) focused on identifying strategies related to data collection, gaps in data, and prevention needs
- coordinate regional behavioral health promotion and substance use prevention trainings
- promote substance use prevention and behavioral health promotion with media awareness activities; and
- conduct voluntary compliance checks on tobacco and e-cigarette retailers and provide education on state tobacco laws to these retailers.

Regions

Figure 1. Map of Public Health Service Regions serviced by a Prevention Resource Center:

Region 1	Panhandle and South Plains
Region 2	Northwest Texas
Region 3	Dallas/Fort Worth Metroplex
Region 4	Upper East Texas
Region 5	Southeast Texas
Region 6	Gulf Coast
Region 7	Central Texas
Region 8	Upper South Texas
Region 9	West Texas
Region 10	Upper Rio Grande
Region 11	Rio Grande Valley/Lower South Texas

How PRCs Help the Community

PRCs provide information and education to other HHSC-funded providers, community groups, and other stakeholders through four core areas based around the four fundamental objectives: Data, Training, Media, and Tobacco. All the core areas work together to position the PRC as a regional hub of information and resources related to prevention, substance use, and behavioral health in general. PRCs work to educate the community on substance use and associated consequences through various data products, such as the RNA, media awareness activities, training, and retailer education. Through these actions, PRCs provide stakeholders with knowledge and understanding of the local populations they serve, help guide programmatic decision making, and provide community awareness and education related to substance use.

Data

The PRC Data Coordinators serve as a primary resource for substance use and behavioral health data for their region. They lead an REW, compile and synthesize data, and disseminate findings to the community. The PRC Data Coordinators also engage in building collaborative partnerships with key community members who aid in securing access to information. To accomplish this, Data Coordinators:

- Develop and maintain the REW;
- Conduct Key Informant Interviews (KII);
- Develop and facilitate at least one regionwide event based on RNA data findings;
- Conduct and attend meetings with community stakeholders to raise awareness and generate support to enhance data collection efforts of substance use and behavioral health data;
- Compile and synthesize data to develop an RNA to provide community organizations and stakeholders with region-specific substance use, behavioral health, and Social Determinants of Health (SDOH) information;
- Direct stakeholders to resources regarding data collection strategies and evaluation activities; and
- Disseminate findings to the community.

Training

The PRC Public Relations Coordinators are tasked with building the prevention workforce capacity through technical support and coordination of prevention trainings. To accomplish this, Public Relations Coordinators:

- Work directly with the HHSC-funded training entity to identify training and learning needs;
- Host and coordinate trainings for virtual and in-person trainings; and
- Provide monthly updates to HHSC-funded prevention providers within the region about the availability of substance use prevention trainings and related trainings offered by the HHSC-funded training entity and other community-based organizations.

Media

The PRC Public Relations Coordinators also use social and traditional media to increase the community's understanding of substance use prevention and behavioral health promotion. To accomplish this, Public Relations Coordinators:

- Promote consistent statewide messaging by participating in HHSC's statewide media campaign;
- Maintain organizational social media platforms required by HHSC to post original content, share other organizations' posts, and HHSC media; and
- Publicize prevention messages through media outlets including radio or television PSAs, media interviews, billboards, bus boards, editorials, or social media.

Tobacco

The PRC Tobacco Coordinators provide education and conduct activities that address retailer compliance with state law. The goal of these tobacco-related activities is to reduce minors' access to tobacco, e-cigarette, and other nicotine products. To accomplish this, Tobacco Coordinators:

- Conduct on-site, voluntary checks with tobacco and e-cigarette retailers in the region to verify compliance with state and federal regulations regarding proper signage and placement of tobacco and e-cigarette products;
- Provide education to tobacco and e-cigarette retailers in the region that require additional information on the most current tobacco and e-cigarette laws as they pertain to minor access;
- Conduct follow-up voluntary compliance visits with all tobacco and e-cigarette retailers who have been cited for violations of tobacco and e-cigarette regulations.

Regional Epidemiological Workgroups

Each Data Coordinator develops and maintains a Regional Epidemiological Workgroup (REW) to identify substance use patterns focused on the State's four prevention priorities at the regional, county, and local level. Members of the REW are stakeholders that represent all twelve of the community sectors (see *Stakeholders/Audience* section below for these) and different geographic locations within that region. The REW also works to identify regional data sources, data partners, and relevant risk and protective factors. Information relevant to identification of data gaps, analysis of community resources and readiness, and collaboration on region-wide efforts comes directly from those participating in the REWs. A minimum of four REW meetings are conducted each year to provide recommendations and develop strong prevention infrastructure support at the regional level.

The Regional Needs Assessment (RNA)

Purpose/Relevance of the RNA

A needs assessment broadly is a systematic process for determining and addressing the gaps that exist between current conditions and desired conditions.³ This RNA is a specific needs assessment that provides community organizations and stakeholders with region-specific substance use and related behavioral health information. At the broadest level, the RNA can show patterns of substance use among adolescents and adults, monitor changes in substance use trends over time, and identify substance use and behavioral health issues that are unique to specific communities. It provides data to local providers to support grant-writing activities and provide justification for funding requests and to assist policymakers in program planning and policy decisions regarding substance use prevention, intervention, and treatment. The RNA can also highlight gaps in data where critical substance use and behavioral health information is missing. It is a comprehensive tool for local providers to design relevant, data-driven prevention and intervention programs tailored to specific needs through the monitoring of county-level differences and disparities. Figure 2 below shows a visual representation of the overall steps and process of creating the RNA.

Figure 2. Steps, Processes, and Stakeholders Involved for RNA Creation

³ Watkins, R., et al. (2012).

Stakeholders/Audience

Stakeholders can use the information presented in this report to contribute to program planning, evidence-based decision making, and community education.

The executive summary found at the beginning of this report provides highlights of the report for those seeking a brief overview. Since readers of this report will come from a variety of backgrounds, a glossary of key concepts can be found at the end of this needs assessment. The core of the report focuses on risk factors and protective factors, consumption patterns, and public health and safety consequences.

Stakeholders within the twelve sectors both contribute to the RNA and benefit from the information within. These stakeholders participate in focus groups, qualitative interviews, Epi-Workgroup meetings, and collaborations with the PRC. Qualitative interviews were completed within all twelve community sectors in 2022 and 2023.⁴ The information gathered in these interviews was compiled to create the 2022 RNA and will be utilized in the 2023 RNA. These twelve sectors are:

- | | |
|---|---|
| <ul style="list-style-type: none"> • youth and young adults • parents • business communities • media • schools • organizations serving youth and young adults • law enforcement agencies • religious or fraternal organizations | <ul style="list-style-type: none"> • civic or volunteer groups • healthcare professionals and organizations • state, local, and tribal government agencies • and other local organizations involved in promoting behavioral health and reducing substance use and non-medical use of prescription drugs such as recovery communities, Education Services Centers, and Local Mental Health Authorities |
|---|---|

Each sector has a unique knowledge of substance use along with risk and protective factors in their communities.

Regionwide Event

The Region 8 PRC was tasked by HHSC to develop and facilitate at least one region-wide event based on RNA data findings to bring targeted communities and stakeholders together to educate and promote collaboration on substance use related issues. The Region 8 region-wide event is the Big Texas Rally for Recovery. The San Antonio Council on Alcohol and Drug Awareness hosts this event in collaboration with other agencies/organizations for stakeholders, partners, and community members alike. The event includes a 5K/1 Mile Run/Walk, live music, food trucks, children's activities, free t-shirts, and free food vouchers for those in recovery and their families.

The most recent Big Texas Rally for Recovery in 2022 was a major success for Region 8. The 5K/1 Mile Run/Walk had approximately 100 participants. An estimated 800 people were in attendance for the rally. The Rally for Recovery served as an opportunity for community members to come together to celebrate recovery and feel the support from others.

⁴ Centers for Disease Control and Prevention. (2021).

Methodology

This needs assessment reviews behavioral health data on substance use, substance use disorders, related risk and protective factors, and other negative public health and safety consequences that will aid in substance use prevention decision making at the county, regional, and state level.

Conceptual Framework

The overall conceptual framework for this report is the use of epidemiological data to show the overall distribution of certain indicators that are associated with substance use and behavioral health challenges. Broadly, these indicators consist of documented risk and protective factors, such as the Social Determinants of Health (SDOH), Adverse Childhood Experiences (ACEs), and Positive Childhood Experiences (PCEs); consumption patterns; and public health and safety consequences related to substance use and behavioral health challenges. The indicators are organized by the domains (or levels) of the Social Ecological Model (SEM). To aid in strategic prevention planning, the report attempts to identify behavioral health disparities and inequities present in the region. For more information on these various frameworks and concepts, please see the “Key Concepts” section later in this report.

Process

PRCs collaborate with HHSC’s Data Specialist in the Prevention and Behavioral Health Promotion Unit, other PRC Data Coordinators, other HHSC staff, and regional stakeholders to develop a comprehensive data infrastructure for each PRC region.

HHSC staff met with the Data Coordinators via monthly conference calls to discuss the criteria for processing and collecting data. Primary data was collected from a variety of community stakeholders, and secondary data sources were identified as a part of the methodology behind this document. Readers can expect to find information from secondary data sources such as: the U.S. Census, American Community Survey, Texas Department of State Health Services, Texas Department of Public Safety, Texas School Survey of Drug and Alcohol Use, among others.

Quantitative Data Selection

Quantitative data refers to any information that can be quantified, counted, or measured, and given a numerical value. Quantitative data tells how many, how much, or how often and is gathered by measuring and counting then analyzing using statistical analysis. Quantitative indicators were selected after doing a literature review on causal factors and consequences that are most related to substance use and non-medical use of prescription drugs. Data sets were selected based on relevance, timeliness, methodological soundness, representativeness, and accuracy. Data used in this report was primarily gathered through established secondary sources including federal and state government agencies to ensure reliability and accuracy. Region-specific quantitative data collected through local law enforcement, community coalitions, school districts, and local-level governments is included to address the unique regional needs of the community.

While the data selection process was heavily informed by research and evidence on substance use, we caution readers against drawing any firm conclusions about the causes and consequences of substance use from the data reported here. The secondary data we have compiled does not necessarily show a direct causal relationship between these factors, substance use, and consequences for the community.

Longitudinal Data

To capture a richer depiction of possible trends in the data, multi-year data, referred to as longitudinal data, is reported where it is available from respective sources. Longitudinal data in this needs assessment consist of the most recently available data going back to 2018. For each indicator, there are a different number of data points due to differing frequencies of data collection. However, data from before 2018 will not be included in this needs assessment regardless of the number of data points available. Efforts are also made to present state-level data for comparison purposes with regional and county data. In some instances, there will be data gaps, and this is generally because the data was not available at the time of the data request.

COVID-19 and Data Quality

One of the many impacts of the COVID-19 pandemic was a direct negative effect on the data collection efforts of many organizations and agencies. This in turn has left a lasting mark on the validity and reliability of any data that was collected during this time. While this report will include data from the time of COVID-19, primarily the years 2020 and 2021, it is important to keep in mind that these data points may not be truly accurate of what was going on during that time. As such, no firm conclusions should be drawn from data collected during those years and we caution again making direct comparisons of these years with the other years presented in this report, namely 2018 and 2022.

Texas School Survey (TSS) and Texas College Survey (TCS)

The primary sources of quantitative data for substance use behaviors for this report are the Texas School Survey of Drug and Alcohol Use (TSS) and the Texas College Survey of Substance Use. TSS collects self-reported substance use data among students in grades 7 through 12 in Texas public schools while TCS collects similar information from college students across Texas. This includes tobacco, alcohol, marijuana, non-medical use of prescription drugs, and use of other illicit drugs. The surveys are sponsored by HHSC and administered by staff from the Department of Public Service and Administration (PSAA) at Texas A&M University. For TSS, PSAA actively recruits approximately 20% of Texas public schools with grades 7 through 12 to participate in the statewide assessment during the spring of even-numbered years. For TCS, PSAA recruits from a variety of college institutions including both 2-year colleges and 4-year colleges. They administer the assessment every odd-numbered year.

It is important to note that during the 2019-2020 school year, schools across Texas were closed from early March through the end of the school year due to the COVID-19 pandemic. Due to this sudden and unexpected closure, many schools that had registered for the survey were unable to complete it. Please note that both the drop in participation along with the fact that those that did complete did so before March may have impacted the data. Figures 3 and 4 on the following page provide more detail on context on recruitment and the number of usable surveys from 2018 through 2022, showcasing how 2020 caused a sizable drop in both campuses that participated and in usable surveys.

Figure 3. Number of Usable Surveys Included in State Sample for Texas School Survey 2018-2022

Number of Surveys Included in State Sample for TSS							
Report Year	Original Campuses Selected	Campuses Signed Up to Participate	Actual Participating Campuses	Total Non-Blank Surveys	Usable Surveys	Number Rejected	Percent Rejected
2022	711	232	164	43,010	42,199	811	1.89%
2020	700	224	107	28,901	27,965	936	3.2%
2018	710	228	191	62,620	60,776	1,884	2.9%

Information in these tables is from the Methodology Reports for the 2018, 2020, and 2022 Texas School Survey. These reports can be accessed here: <https://www.texaschoolsurvey.org/Report>.

Figure 4. Texas School Survey Distribution Across Grades in 2020 and 2022

Grade	Survey Distribution TSS 2022		Survey Distribution TSS 2020		Difference Between 2020* and 2022 TSS
	# of Usable Surveys	%	# of Usable Surveys	%	# of Usable Surveys
Grade 7	10,759	25.5%	6,414	22.9%	4,345
Grade 8	11,056	26.2%	6,472	23.1%	4,584
Grade 9	5,345	12.7%	4,189	15.0%	1,156
Grade 10	5,268	12.5%	4,119	14.8%	1,149
Grade 11	4,948	11.8%	3,556	12.7%	1,392
Grade 12	4,823	11.4%	3,215	11.5%	1,608
Total	42,199	100.0%	27,965	100.0%	14,234

Information in these tables is from the Methodology Reports for the 2018, 2020, and 2022 Texas School Survey. These reports can be accessed here: <https://www.texaschoolsurvey.org/Report>.

Qualitative Data Selection

Qualitative data is descriptive in nature and expressed in terms of language, interpretation, and meaning rather than numerical values and categorized based on traits and characteristics. Qualitative data tells the why or how behind certain behaviors by describing certain attributes and is gathered through observation and interviews then analyzed by grouping data into meaningful themes or categories.

Data Coordinators conducted key informant interviews with community members about what they believe their greatest needs and resources are in the region. These qualitative data collection methods

provide additional context and nuance to the secondary data and often reveal additional potential key informants and secondary data sources.

Key Informant Interviews

Data Coordinators conducted Key Informant Interviews (KII) with stakeholders that represent the twelve community sectors (please see the prior Stakeholders/Audience section in the Introduction for a table of these sectors) across each region. Most of these interviews occurred between September of 2021 and August of 2022 and a few others up through August of 2023.

Key Informants are individuals with specific local knowledge about certain aspects of the community because of their professional background, leadership responsibilities, or personal experience. Compared to quantitative data, the format of interviewing allows the interviewer to ask more open-ended questions and allows the Key Informant to speak rather than filling in pre-selected options. This results in data with richer insights and more in-depth understanding and clarification. The interviews focused on the informant's perceptions of their communities' greatest resources and needs and to determine how their communities are affected by substance use and behavioral health challenges.

Each participant was asked the following questions:

1. What substance use concerns do you see in your community?
 - a. What do you think are the greatest contributing factors, and what leads you to this conclusion?
 - b. What do you believe are the most harmful consequences of substance use/misuse, and what leads you to this conclusion?
2. How specifically does substance use affect the (insert sector here) sector?
3. What substance use and misuse prevention services and resources are you aware of in your community?
 - a. What do you see as the best resources in your community?
 - b. What services and resources does your community lack?
4. What services and resources specifically dedicated to promoting mental and emotional wellbeing are you aware of in your community?
 - a. What do you see as the best resources in your community?
 - b. What services and resources does your community lack?
5. What information does the (insert sector here) sector need to better understand substance use/misuse and mental and emotional health in your community?
6. What other questions should we be asking experts in this area?

Once the KII was complete, the Data Coordinator transcribed the audio from the interviews and then analyzed the data. This involved categorizing the information by topics and themes and looking for patterns across the interviews.

Key Concepts

Epidemiology

Epidemiology is defined as the study (scientific, systematic, and data-driven) of the distribution (frequency, pattern) and determinants (causes, risk factors) of health-related states or events (not just diseases) in specified populations (neighborhood, school, city, state, country, global). It is also the application of this study to the control of health problems.⁵ This definition provides the theoretical framework that this assessment uses to discuss the overall impact of substance use. Epidemiology frames substance use as a preventable and treatable public health concern. The Substance Abuse and Mental Health Services Administration (SAMHSA), the main federal authority on substance use, utilizes epidemiology to identify and analyze community patterns of substance use and the contributing factors influencing this behavior.

Risk and Protective Factors

One component shared by effective prevention programs is a focus on risk and protective factors that influence adolescents. Protective factors are characteristics associated with a lower likelihood of negative outcomes or that reduce a risk factor's impact. Examples include strong and positive family bonds, parental monitoring of children's activities, and access to mentoring. Risk factors are characteristics at the biological, psychological, family, community, or cultural level that precede and are associated with a higher likelihood of negative outcomes. Examples include unstable home environments, parental use of alcohol or drugs, parental mental illness, poverty, and failure in school performance. Risk and protective factors can exist in any of the domains of the Socio-Ecological Model, described more in the following section.⁶

Social-Ecological Model

The Socio-Ecological Model (SEM) is a conceptual framework developed to better understand the multidimensional risk and protective factors that influence health behavior and to categorize health intervention strategies.⁷ This RNA is organized using the four domains of the SEM (See Figure 5)⁸ as described below:

- Societal Domain - social and cultural norms and socio-demographics such as the economic status of the community
- Community Domain - social and physical factors that indirectly influence youth including educational attainment of the community, community conditions like the physical built environment, experiences of poverty, the health care/service system, and retail access to substances

⁵ Centers for Disease Control and Prevention. (2012).

⁶ Substance Abuse and Mental Health Services. (2019).

⁷ Centers for Disease Control and Prevention. (2022a).

⁸ Adapted from: D'Amico, EJ, et al. (2016).

Figure 5. Social-Ecological Model for Substance Use, with Examples

		Protective Factors
Society		<ul style="list-style-type: none"> • Impoverishment • Unemployment and underemployment • Discrimination • Pro-AOD-use messages in the media
Community		<ul style="list-style-type: none"> • Media literacy (resistance to pro-use messages) • Decreased accessibility • Increased pricing through taxation • Raised purchasing age and enforcement • Stricter driving-under-the-influence laws • Opportunities for participation as active members of the community • Decreasing AOD accessibility • Cultural norms that set high expectations for youth • Social networks and support systems within the community • Opportunities for prosocial involvement • Rewards/recognition for prosocial involvement • Healthy beliefs and clear standards for behavior • Caring and support from teachers and staff • Positive instructional climate
Interpersonal		<ul style="list-style-type: none"> • Availability of AOD • Community laws, norms favorable toward AOD • Extreme economic and social deprivation • Transition and mobility • Low neighborhood attachment and community disorganization • Academic failure beginning in elementary school • Low commitment to school • Bonding (positive attachments) • Healthy beliefs and clear standards for behavior • High parental expectations • A sense of basic trust • Positive family dynamics • Association with peers who are involved in school, recreation, service, religion, or other organized activities • Resistance to negative peer pressure • Not easily influenced by peers
Individual		<ul style="list-style-type: none"> • Family history of AOD use • Family management problems • Family conflict • Parental beliefs about AOD • Association with peers who use or value AOD use • Association with peers who reject mainstream activities and pursuits • Susceptibility to negative peer pressure • Easily influenced by peers • Biological and psychological dispositions • Positive beliefs about AOD use • Early initiation of AOD use • Negative relationships with adults • Risk-taking propensity/impulsivity • Opportunities for prosocial involvement • Rewards/recognition for prosocial involvement • Healthy beliefs and clear standards for behavior • Positive sense of self • Negative beliefs about AOD • Positive relationships with adults

- Interpersonal Domain – social and physical factors that indirectly impact youth including academic achievement and the school environment, family conditions and perceptions of parental attitudes, and youth perceptions of peer consumption and social access
- Individual Domain – intrapersonal characteristics of youth such as knowledge, skills, attitudes, beliefs, and behaviors

The SEM proposes that behavior is impacted by all levels of influence, from the intrapersonal to the societal, and that prevention and health promotion programs become more effective when they intervene at multiple levels. Changes at the societal and community levels will create change in individuals, and the support of relevant stakeholders and community leaders in the population is essential for implementing environmental change at the community and societal level.

Social Determinants of Health (SDOH)

The U.S. Department of Health and Human Services, Health People 2030 defines the SDOH as the conditions in the environments where people are born, live, learn, work, play, worship, and age that affect a wide range of health, functioning, and quality-of-life outcomes and risks.⁹ The SDOH are grouped into 5 domains (see Figure 6): economic stability, education access and quality, health care access and quality, neighborhood and built environment, and social and community context. SDOH's have a major impact on health, well-being, and quality of life, and they also contribute to health disparities and inequities.

Adolescence

The American Psychological Association defines “adolescence” as a part of human development which begins at puberty (10-12 years of age) and ends with physiological and neurobiological maturity, reaching to at least 20 years of age. Brain development continues into an individual’s mid-twenties. Adolescence is a period of major changes in physical characteristics along with significant effects on body image, self-concept, and self-esteem. Mental characteristics are also developing during this time. These include abstract thinking, reasoning, impulse control, and decision-making skills.¹⁰ The World Health Organization (WHO) adds this period of growth poses a critical point in vulnerability where the non-medical use of substances, or other risky behaviors can have long-lasting negative effects on future health and well-being.¹¹

A similar but slightly different term that is used in the justice system is “juvenile.” The Texas Juvenile Justice System defines a juvenile as a person at least 10 years old but not yet 17 at the time he or she commits an act of “delinquent conduct” or “conduct in need of supervision”.¹² Delinquent conduct is generally conduct that could result in imprisonment or jail if committed by an adult. Conduct in Need of Supervision for juveniles includes truancy and running away from home. In the context of some indicators, juvenile will be used instead of adolescent to more precisely define the population of interest.

Adverse Childhood Experiences (ACEs)

The CDC-Kaiser Permanente adverse childhood experiences (ACE) study from 1998 is one of the largest investigations of childhood abuse, neglect, and household challenges, and the effects on health and well-being later in life.¹³ ACEs are events that occur in children 0-17 years of age. The ACE questionnaire asks about experiences such as childhood abuse, neglect, and household dysfunction across seven different categories. The study showed that individuals with a score of 4 or more (meaning they experienced at least one event in four of the seven categories) have an increased risk for:

- Smoking, heavy alcohol use, and SUDs
- Mental health issues, such as depression and suicidal behavior
- Poor self-rated health
- Sexually transmitted disease
- Challenges with obesity and physical inactivity
- Heart disease
- Lung disease
- Risk for broken bones
- Multiple types of cancer

¹⁰ American Psychological Association. (2023).

¹¹ World Health Organization. (2023).

¹² Texas Juvenile Justice Department. (2022).

¹³ Felitti, VJ, et al. (1998).

The study also showed that there is a dose-response relationship where experiencing ACEs in more categories is directly linked with an increasing risk for the above physical and behavioral health concerns. ACEs can also negatively impact job opportunities, education, and earning potential.

ACEs are common with the CDC reporting that approximately 61% of adults have experienced at least one type of ACE before the age of 18, and 1 in 6 reports having 4 or more. Women and other marginalized groups are at a higher risk for experiencing 4 or more types of ACEs. ACEs can, however, be prevented by creating safe, stable, and healthy relationships and environments. Preventing ACEs requires understanding and addressing the risk and protective factors that make these experiences more likely to occur.¹⁴ Figure 7 below describes the potential health and socioeconomic benefits in adulthood that could come from preventing ACEs in childhood.

Figure 7. Potential reduction of negative outcomes in adulthood.

Accessed from: <https://www.cdc.gov/vitalsigns/aces/pdf/vs-1105-aces-H.pdf>. Original source: BRFSS 2015-2017, 25 states, CDC Vital Signs, November 2019.

Positive Childhood Experiences (PCEs)

Unlike ACEs which have been researched for decades, Positive Childhood Experiences are still a relatively new and explored aspect of prevention. Dr. Christina Bethell from Johns Hopkins, one of the leading researchers on Positive Childhood Experiences (PCEs), defines a positive childhood experience as “feeling safe in our families to talk about emotions and things that are hard and feeling support during hard times.”¹⁵ Dr. Bethell and her colleagues conducted a similar study to the ACEs study in 2019 to

¹⁴ Centers for Disease Control and Prevention. (2022b).

¹⁵ Kreitz, M. (2023).

determine the health impacts of positive childhood experiences. In this study, they identified seven distinct PCEs:

1. The ability to talk with family about feelings.
2. The sense that family is supportive during difficult times.
3. The enjoyment of participating in community traditions.
4. Feeling a sense of belonging in high school (this did not include those who did not attend school or were home schooled).
5. Feeling supported by friends.
6. Having at least 2 non-parent adults who genuinely cared about them.
7. Feeling safe and protected by an adult in the home.¹⁶

The researchers used data from adults who responded to the 2015 Wisconsin Behavioral Risk Factor Survey (BRFS) and, like the ACEs study, also found that PCEs have a dose-response relationship with adult mental and behavioral health meaning that experiencing more PCEs was associated with better outcomes. This included a lower odd of depression and poor mental health and increased odds of reporting high amounts of social and emotional support in adulthood. The protective effects of PCE's remained even after adjusting for ACEs suggesting that promotion of PCEs may have a positive lifelong impact despite co-occurring adversities such as ACEs.¹⁷

Consumption Patterns

This needs assessment follows the example of the [Texas School Survey](#) (TSS), the [Texas Youth Risk Surveillance System](#) (YRBSS), and the [National Survey on Drug Use and Health](#) (NSDUH), by organizing consumption patterns into three categories:

- lifetime use (has tried a substance, even if only once)
- school year use (past year use when surveying adults or youth outside of a school setting)
- current use (use within the past 30 days)

These three consumption patterns are used in the TSS to elicit self-reports from adolescents on their use of tobacco, alcohol, marijuana, and other illicit drugs, and their non-medical use of prescription drugs. The TSS therefore serves as the primary outcome measure of Texas youth substance use in this needs assessment.

¹⁷ Bethell, C. et al. (2019).

Geographical Area and Regional Demographics

Region 8 Overview

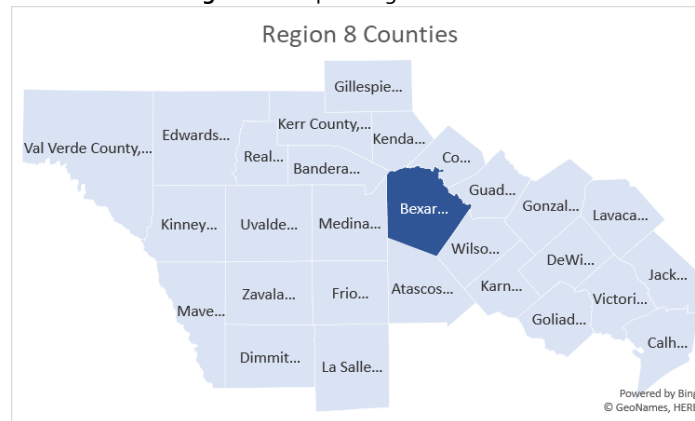

Geographic Boundaries

Region 8 includes 28 counties and covers over 31,057 square miles. Located in South Central Texas, it borders the Rio Grande River and Mexico to the West and the Gulf Coast to the East. The region contains nearly every type of geographical setting found in Texas: rolling hills and plains, hill country, coastal plains, brush country, and desert.

Counties

Counties served in Region 8 include: Atascosa, Bandera, Bexar, Calhoun, Comal, Dewitt, Dimmit, Edwards, Frio, Gillespie, Goliad, Gonzales, Guadalupe, Jackson, Karnes, Kendall, Kerr, Kinney, LaSalle, Lavaca, Maverick, Medina, Real, Uvalde, Val Verde, Victoria, Wilson, and Zavala.

Figure 8. Map of Region 8 Counties

Zip Codes

A zip code's influence on the health of those living there is multifold. Where individuals live directly affects their health in several ways, from exposure to air pollution and toxins to accessibility of healthy food, green space, and medical care. Additionally, one's zip code can be a more subtle indicator of socioeconomic factors that are inherent to health and longevity, including race and income¹⁸.

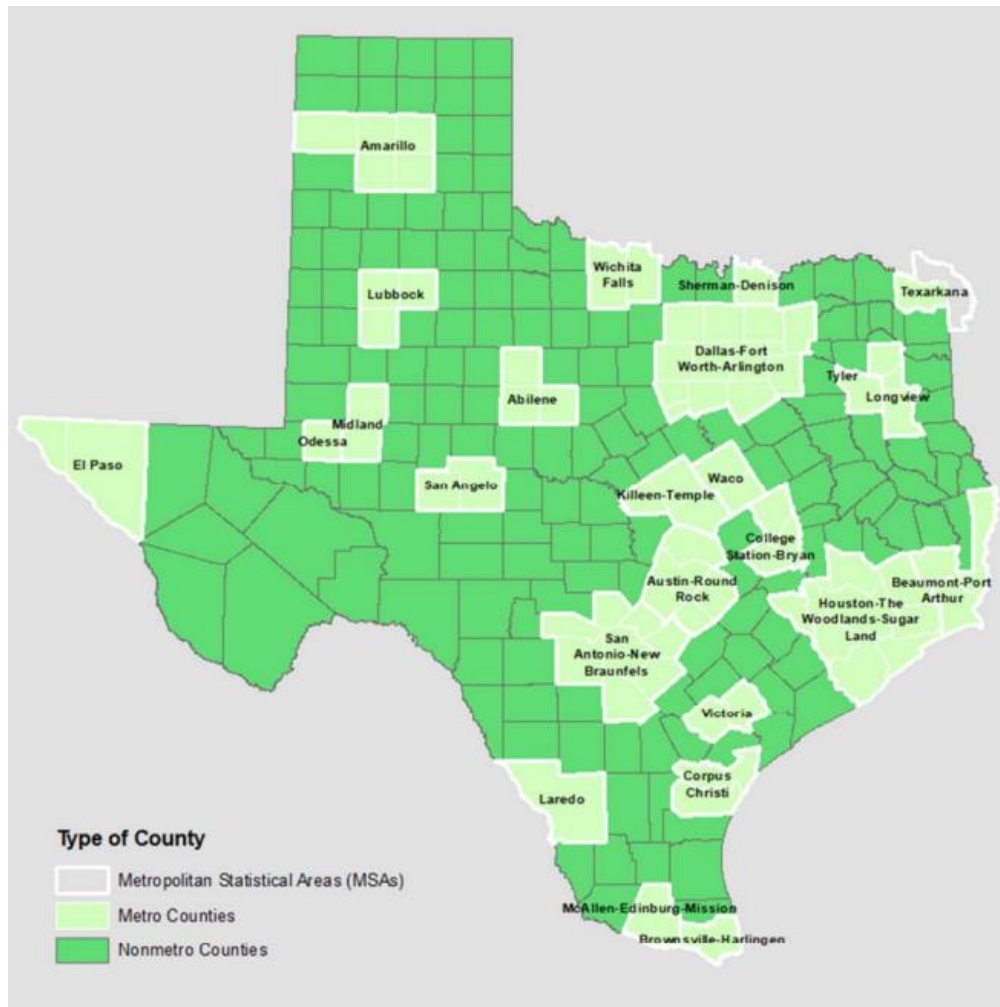

Region 8 encompasses 185 cities and towns, 2 major military installations and the Kickapoo Traditional Tribe of Texas including over 250 zip codes. A detailed list of zip codes by city and town is in Appendix, Table 1. Region 8 Zip Codes by County.

¹⁸ Ducharme, J & Wolfson, E. (2019).

Major Metropolitan Areas

Counties are designated as Metropolitan or Nonmetropolitan by the U.S. Office of Budget and Management. Texas Health Professions Resource Center (HPRC) currently uses the designations that took effect in 2013. In Texas, 82 counties are designated as Metropolitan and 172 are designated as Nonmetropolitan. The HPRC uses the terms 'Non-metropolitan and Metropolitan' interchangeably with 'Rural and Urban'.

Figure 9. Texas Metropolitan Statistical Areas (MSA)

Texas Demographic Center. (2017). *Metropolitan and Non-Metropolitan Counties in Texas*. https://demographics.texas.gov/Resources/publications/2017/2017_08_21_UrbanTexas.pdf

Region 8 includes two Metropolitan Statistical Areas (MSAs) including the San Antonio – New Braunfels MSA, with a population of 2,570,862, and the Victoria MSA, with a population of 98,301. Together they encompass 2,669,163 residents, which comprises 87.8 percent of the Region 8 population.

The San Antonio–New Braunfels MSA, also referred to as Greater San Antonio, includes Atascosa, Bandera, Bexar, Comal, Guadalupe, Kendall, Medina, and Wilson counties. The land area is 7,312.7 square miles with a population density of 351.6 persons per square mile. The San Antonio–New Braunfels MSA is the third-largest metro area in Texas after the Dallas–Fort Worth–Arlington MSA and the Houston–The Woodlands–Sugar Land MSA.

Figure 10. San Antonio-New Braunfels MSA Geographical Boundaries

The Victoria MSA, also known as the Golden Crescent Region, includes Goliad and Victoria counties. The land area is 1,734.1 square miles with a population density of 56.7 persons per square mile. The Victoria MSA ranks as the second smallest metro area in Texas next to the Texarkana MSA.

Figure 11. Victoria MSA Geographical Boundaries

The Kickapoo Traditional Tribe of Texas (KTTT), formerly known as the Texas Band of Traditional Kickapoo, is one of three federally recognized tribes of the Kickapoo people. The KTTT has a current population of 1,095 enrolled members and was officially recognized by the Texas Indian Commission in 1977. The KTTT Reservation is located by the Rio Grande on the US-Mexico border in western Maverick County. It is just south of Eagle Pass, Texas as part of the Rosita Valley community¹⁹.

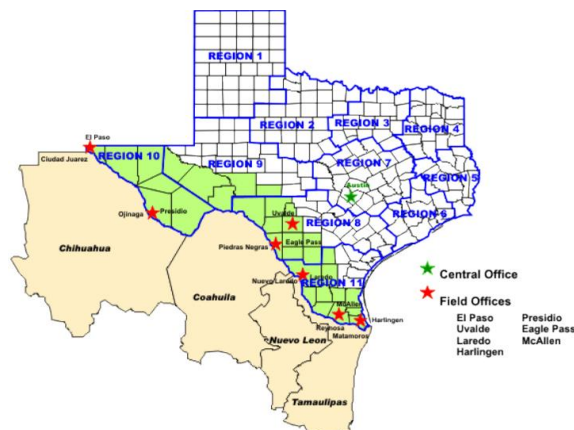

Figure 12. Kickapoo Traditional Tribe of Texas

Border and Non-Border Counties: Counties are designated as Border or Non-Border according to Article 4 of the La Paz Agreement of 1983, which defines a county as a Border County if that county is within 100 kilometers of the U.S./Mexico border. There are 32 counties in Texas designated as Border Counties by this definition.

Region 8 has 10 counties that border Mexico including Dimmit, Edwards, Frio, Kinney, LaSalle, Maverick, Real, Uvalde, Val Verde and Zavala as seen in Figure 13 below.

Figure 13. Texas Border and Non-Border Counties

Su, D., & Wang, D. (2012). Acculturation and cross-border utilization of health services. *Journal of immigrant and minority health*, 14(1), 62–66.

¹⁹ Kickapoo Traditional Tribe of Texas. (2023).

Approximately 181,995 (6.1 percent) of Region 8 residents live near the border of Mexico. The land area covers 14,870.3 square miles with a population density of 12.2 persons per square mile.

Rural Areas

In accordance with the Texas Health and Safety Code (§ 104.44 and §105.003), the Health Professions Resource Center (HPRC) compiles, analyzes, and disseminates much of its data by Urban and Rural Counties or Border and Non-Border Counties. Below are explanations of those designations:

Rural Counties: Eighteen counties in Region 8 are designated as rural (Non-metropolitan) including: Calhoun, DeWitt, Dimmit, Edwards, Frio, Gillespie, Gonzales, Jackson, Karnes, Kerr, Kinney, LaSalle, Lavaca, Maverick, Real, Uvalde, Val Verde and Zavala.

Urban Counties: The remaining 8 counties are designated as urban (metro) areas including: Atascosa, Bandera, Bexar, Comal, Goliad, Guadalupe, Kendall, Medina, Victoria, and Wilson.

Eighty-seven percent (87.8%) of the Region 8 population resides in urban areas.

Rural Health Disparities

People who live in rural areas are more likely than urban residents to die prematurely from all the five leading causes of death: heart disease, cancer, unintentional injury, chronic lower respiratory disease, and stroke. These rural health disparities have many causes:

- **Health Behaviors:** Rural residents often have limited access to healthy foods and fewer opportunities to be physically active compared to their urban counterparts, which can lead to conditions such as obesity and high blood pressure. Rural residents also have higher rates of smoking, which increases the risk of many chronic diseases.
- **Health Care Access:** Rural counties have fewer health care workers, specialists (such as cancer doctors), critical care units, emergency facilities, and transportation options. Residents are also more likely to be uninsured and to live farther away from health services.
- **Healthy Food Access:** National and local studies suggest that residents of low-income, minority, and rural neighborhoods often have less access to supermarkets and healthy foods.
- **Demographic Characteristics:** Residents of rural areas tend to be older, with lower incomes and less education than their urban counterparts. These factors are linked to poorer health²⁰.

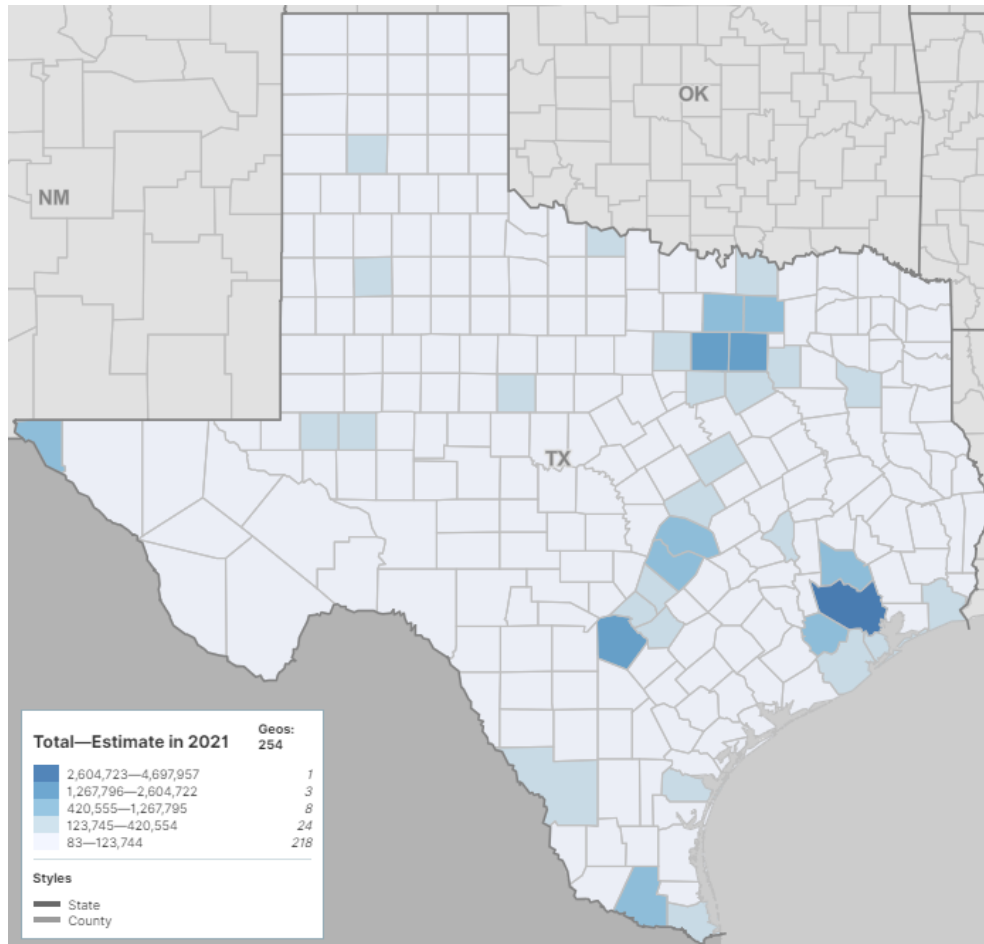

²⁰ Centers for Disease Control. (2023).

Demographic Information

Total Population

According to the American Community Survey (ACS) 5-Year Estimates (2017-2021),²¹ Texas’ estimated population is 29,243,342 persons, making it the second largest U.S. state by both area (after Alaska) and population (after California). It has 261,231.7 square miles of land with a population density of 111.9 persons per square mile.

Figure 14. Texas Population (ACS 5-Year Estimates)

U.S. Census Bureau (2021). 2017-2021 American Community Survey 5-Year Estimates. Retrieved from <https://data.census.gov>

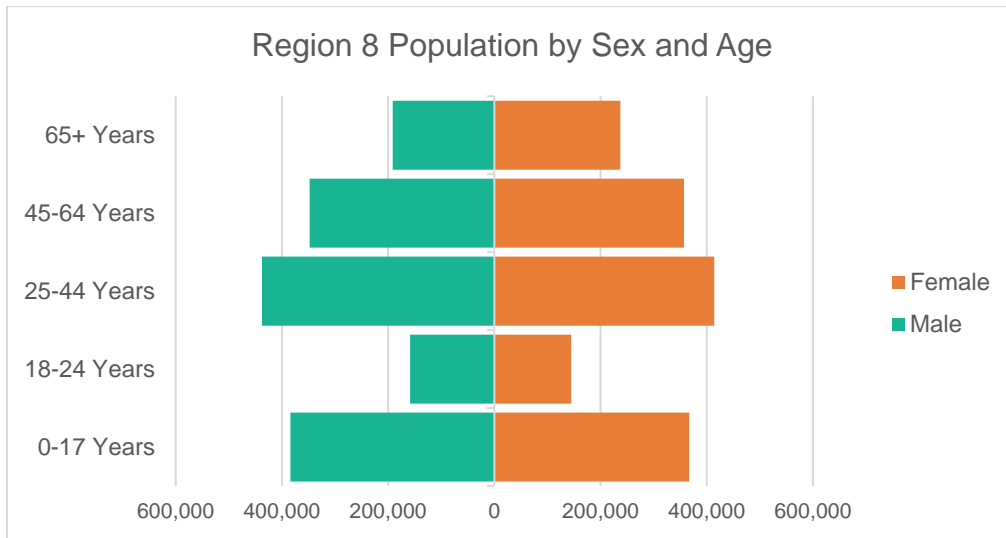

The ACS 5-Year Population estimate for Region 8 is 3,039,996 persons, this makes it the 4th largest populated Region in Texas. Bexar County has the largest population in the region, with an estimated 2,014,059 persons, followed by Guadalupe County, with 173,828 persons, and Comal County with, 165,201 persons. Edwards County has the smallest estimated population with 1,380 persons. For all county-level data, see Appendix, Table 2. Region 8 5-Year Population Estimates.

²¹ The American Community Survey (ACS) utilizes 1-year population estimates and compiles them into 5-year estimates that are more accurate than the individual annual estimates. The ACS provides more detailed estimates for various subgroups of Americans compared to the regular Decennial Census.

Total Population by Sex and Age

The percentage of males and females in Region 8 is similar to that of Texas. In Region 8, there is an estimated 1,519,597 males (50.0%) and 1,520,399 females (50.0%). Based on the population pyramid of Region 8 in Figure 15 below, the largest age group in the population is those aged 25-44 with 28.0 percent of the total population. The smallest age group in the population is those aged 18-24 with 10.0 percent of the total population.

Figure 15. Region 8 Population Pyramid

Shown below in Figure 16, are the age breakdowns for each county in Region 8. Maverick County has the largest percentage of youth (age 0-17) at 31.0 percent, while Real County has the highest percentage of elderly (age 65+) at 34.1 percent. See Appendix, Table 3. Region 8 Total Population by Sex and Age.

Figure 16. Region 8 Population by Age

Total Population by Race

According to the American Community Survey 5-year Estimates, 81.9 percent of Region 8 reported their race as White, 26.0 percent reported their race as “Other”, 7.9 percent reported their race as Black, 3.4 percent reported their race as Asian, 2.2 percent reported their race as American Indian/Alaska Native, less than 1 percent of Region 8 reported their race to be Native Hawaiian/Pacific Islander. See Appendix, Table 4. Region 8 Total Population by Race. The “in combination” counts are **not** depicted below, the graph below depicts the alone data, meaning people who have identified with only one race. Refer to the note below for more information on the collection of “in combination” data.

Figure 17. Region 8 Population by Race

Note: Racial diversity in the United States has been increasing steadily with more people identifying as more than one race. To help account for this, the Census makes a distinction between the number of people of a given racial group “alone” or “in combination.” People counted within the “alone” category are those who identified themselves as being a part of only one group, for example, just Black or African American “alone”. People counted within the “in combination” category refers to anyone who identified themselves as part of a given racial group even if they also identified with more than that one race. This means that Black or African American “in combination” would include both those who identified as Black or African American “alone” and also those who identified with multiple groups, for example, those who identify as both Black or African American and American Indian/Alaska Native. To respect individuals’ self-identification of their race(s) and to accurately capture the total number of each racial group, we report the number and rates of people of each race “in combination” rather than the number of those “alone.” As a result, adding the numbers of each racial group together would be greater than the total county population since “in combination” counts individuals towards all groups with which they identified.

Total Population by Ethnicity

The majority of Region 8 identifies as Hispanic or Latino, with 56.1 percent of the population reporting so. Lavaca County reported the smallest percentage of individuals who identify as Hispanic or Latino with 20.0 percent, while Maverick County reported the largest percentage of individuals who identify as Hispanic or Latino with 95.1 percent. See Appendix, Table 5. Region 8 Total Population by Ethnicity.

Figure 18. Region 8 Population by Ethnicity

Household Composition

Children growing up in single-parent families typically do not have the same economic or human resources available as those growing up in two-parent families. Compared with children in married-couple families, children raised in single-parent households are more likely to drop out of school, to have or cause a teen pregnancy and to experience a divorce in adulthood²². According to the ACS 5-Year Estimates, 22.3 percent of Region 8 households were single-parent households with children under 18. For the State of Texas, 20.7 percent of households were single-parent households with children under 18. ACS reported 18.2 percent of Region 8 households were female single-parents, while 4.1 percent were male single-parents.

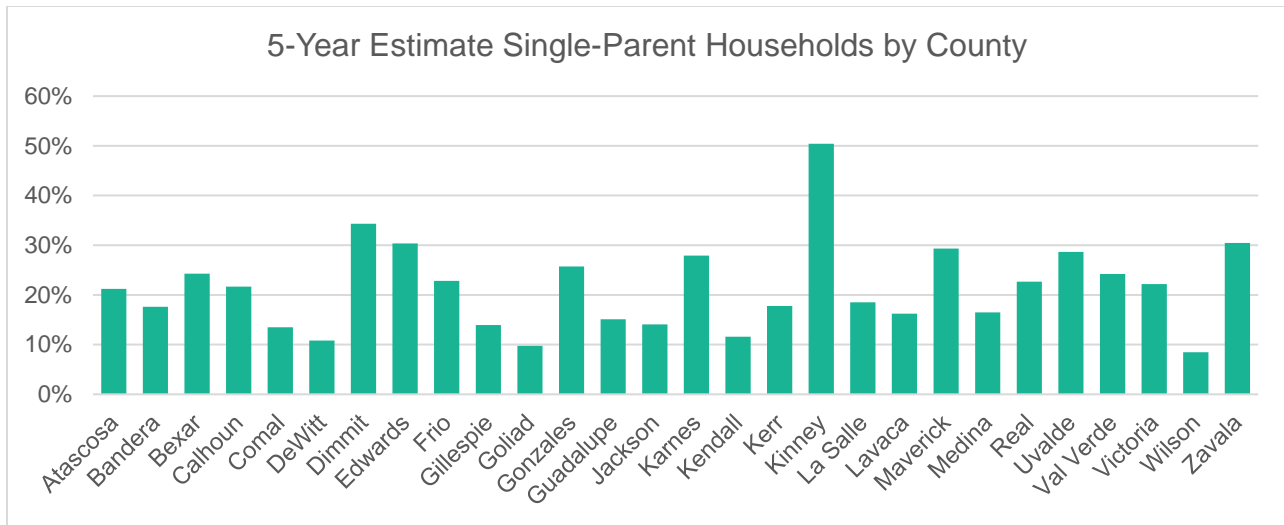

Figure 19. ACS 5-Year Estimate of Single-Parent Households by Region and State

The percentage of Single-Parent Households in Region 8 ranged from 8.5 percent in Wilson County to 50.4 percent in Kinney County. See Appendix, Table 6. Region 8 Single Parent Households 5-Year Estimate.

²² Aurora University. (2016).

Figure 20. ACS 5-Year Estimate of Single-Parent Households by County

Disability Status

The American Community Survey 5-Year Estimates provides disability data for individuals who are institutionalized and noninstitutionalized. The ACS estimates that in Texas, 47.9 percent of institutionalized persons have disabilities.

In Region 8, an estimated 429,338 people have disabilities. Kinney County has the highest percentage of people with disabilities of all Region 8 Counties with 34.0 percent, followed by Real with 30.5 percent. La Salle County reported the least amount of people with disabilities at 10.1 percent. See Appendix, Table 7. Region 8 Noninstitutionalized Disability Data.

Figure 21. Region 8 Noninstitutionalized Disability Data

LGBTQ+ Population

Behind California, Texas has the largest number of same-sex households with an estimated 107,252 households. Of those same-sex households in Texas, 54.2 percent are married households. See Appendix, Table 8. Same-Sex Couple Households Demographics.

Table 1. National Same-Sex Couple Age Breakdown by Relationship

Household characteristics	Married couples			Unmarried partners		
	Total	Male-male	Female-female	Total	Male-male	Female-female
	Percent	Percent	Percent	Percent	Percent	Percent
Total households (number)	740,500	348,300	392,300	536,700	259,800	276,900
Age of householder						
15 to 24 years	2.3	2.2	2.4	11.4	7.3	15.2
25 to 34 years	19.1	14.9	22.8	34.1	32.2	35.9
35 to 44 years	22.9	21.0	24.5	19.7	21.8	17.8
45 to 54 years	19.2	21.1	17.5	12.4	13.6	11.3
55 to 64 years	20.7	23.5	18.1	12.7	14.9	10.6
65 years and over	15.9	17.4	14.7	9.7	10.2	9.2
Average age of householder (years)	48.6	50.3	47.1	40.9	42.7	39.3
Average age of spouse/partner (years)	47.4	48.5	46.5	39.3	40.4	38.4

Limited English Language Proficiency and Languages Spoken in Home

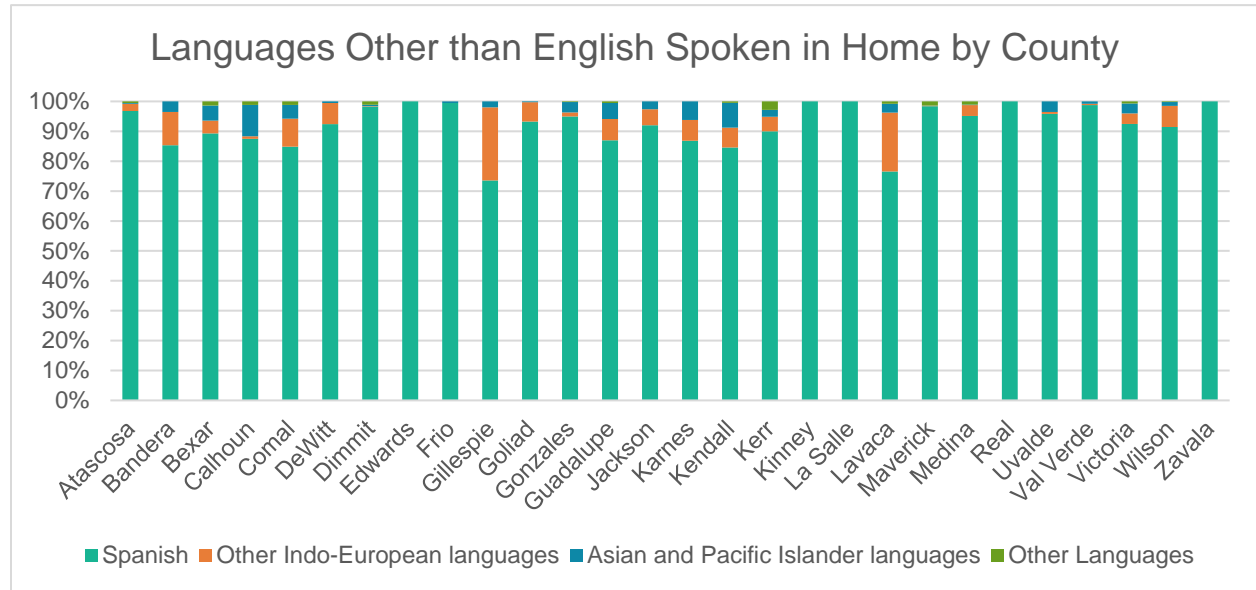

Language barriers can have detrimental effects on a person’s ability to access care and resources. Maverick County has the highest percentage of people with limited English proficiency at 26.2 percent of the population and the highest percentage of people who speak a language other than English at 94.3 percent. See Appendix, Table 9. Household Language by English Proficiency.

Figure 22. Region 8 Limited English Proficiency by County

Of Region 8, residents aged 5-years and older who speak a language other than English at home, 38.6 percent speak Spanish, 1.8 percent speak Indo-European languages, 1.9 percent speak Asian and Pacific Island languages, and 0.5 speak other languages. Spanish is the predominate language other than English spoken at home for residents 5-years and older in all counties. See Appendix, Table 10. Household Language.

Figure 23. Region 8 Limited English Proficiency by County

Risk and Protective Factors: Societal Domain

Economic Factors

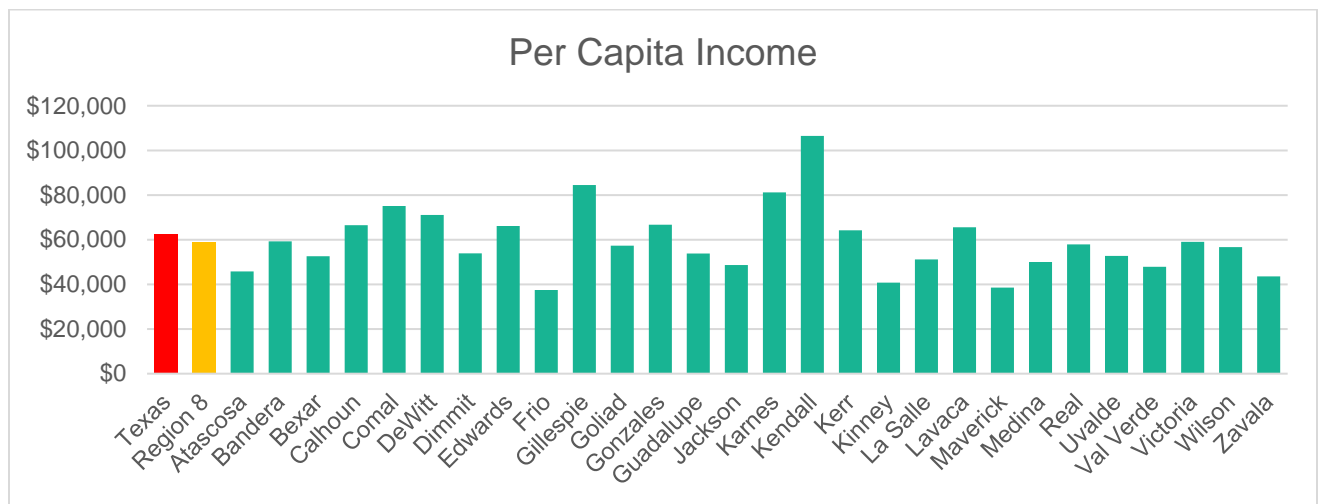

Socioeconomic status (SES) encompasses not just income but also educational attainment, occupational prestige, and subjective perceptions of social status and social class. Socioeconomic status can encompass quality of life attributes as well as the opportunities and privileges afforded to people within society. Poverty, specifically, is not a single factor but rather is characterized by multiple physical and psychosocial stressors. Furthermore, SES is a consistent and reliable predictor of a vast array of outcomes across the life span, including physical and psychological health. Thus, SES is relevant to all realms of behavioral and social science, including research, practice, education, and advocacy.

Lower levels of SES have been found to be associated with higher levels of emotional and behavioral difficulties, higher rates of depression, anxiety, attempted suicide, cigarette dependence, illicit drug use, and episodic heavy drinking among adolescents, higher levels of aggression, hostility, perceived threat, and discrimination for youth; and higher infant mortality²³.

Income

Per capita income (PCI) or average income measures the average income earned per person in a given area (city, region, country, etc.) in a specified year. It is calculated by dividing the area's total income by its total population. This data can also be used to evaluate the standard of living. The ACS 5-Year Estimated Per Capita Income for Texas is \$62,586. For Region 8, the estimated Per Capita Income is \$59,093, which is lower than that of Texas.

Figure 24. Per Capita Income by Region, State, and County

The standardized median income for a family of four in Region 8 counties fall above the 2024 federal poverty level guidelines for a family of four (\$30,000) as seen in Figure 25 below. See Appendix, Table 11. Region 8 Median Household Income 5-Year Estimate (2018-2022).

²³ American Psychological Association. (n.d.).

Figure 25. Region 8 Per Capita Income by County

Unemployment

Research suggests that current unemployment, or extended unemployment, negatively affects people’s mental health. Unemployed individuals are more likely to need specialized care for mental health conditions. Accumulating unemployment has been linked to lifestyle factors, such as poor diet quality, increased alcohol consumption, and reduced health service use²⁴.

In 2020 the coronavirus (COVID-19) pandemic resulted in the shutdown of the economy across the nation and unemployment rates soared as seen in Figure 26. From 2020 to 2023, the unemployment rates have declined for Texas and Region 8. The 2023 unemployment rate for Region 8 is 3.8 percent, lower than Texas rate of 3.9 percent.

²⁴ Junna, L., Moustgaard, H., & Martikainen, P. (2022).

Figure 26. Unemployment Rates by Region and State

The 2023 unemployment rates in the Region 8 counties ranged from a low of 2.5 percent in Edwards County, to a high of 7.5 percent in Maverick County. See Appendix, Table 12. Region 8 Unemployment Rates 2018-2023.

Figure 27. Region 8 Unemployment Rates by County

Economically Disadvantaged Students

In Region 8, during the 2023-2024 school year, the rate of economically disadvantaged students was 601.6 students per 1,000, a slight increase from 586.7 students per 1,000 in the 2022-2023 school year. The rate of economically disadvantaged students also increased in Texas from 617.9 students per 1,000 in 2022-2023 to 621.9 per 1,000 in 2023-2024, as seen in Figure 28.

Figure 28. Economically Disadvantaged Students by Region and State

The rate of economically disadvantaged students in Region 8 counties varied from the lowest in Kendall at 239.3 students per 1,000 and the highest in La Salle at 866.1 students per 1,000 as seen in Figure 29 below. See Appendix, Table 13. Economically Disadvantaged Students.

Figure 29. Region 8 Economically Disadvantaged Students by County

Students Experiencing Homelessness

In Texas, during the 2023-2024 school year, there were 77,755 students experiencing homelessness enrolled in Texas public schools, an increase from 71,639 students experiencing homelessness during the 2022-2023 school year. In Region 8, there was an average of 13.3 students per 1,000 enrolled for the 2023-2024 school year.

Figure 30. Students Experiencing Homelessness Rate per 1000 by State

The rate of students experiencing homelessness enrolled ranged from 0.0 per 1,000 students in Edwards County to 48.7 per 1,000 enrolled in Calhoun County as seen in Figure 31 below. See Appendix, Table 14. Region 8 Students Experiencing Homelessness 2018-2024.

Figure 31. Region 8 Students Experiencing Homelessness Rate per 1000 by County

Risk and Protective Factors: Community Domain

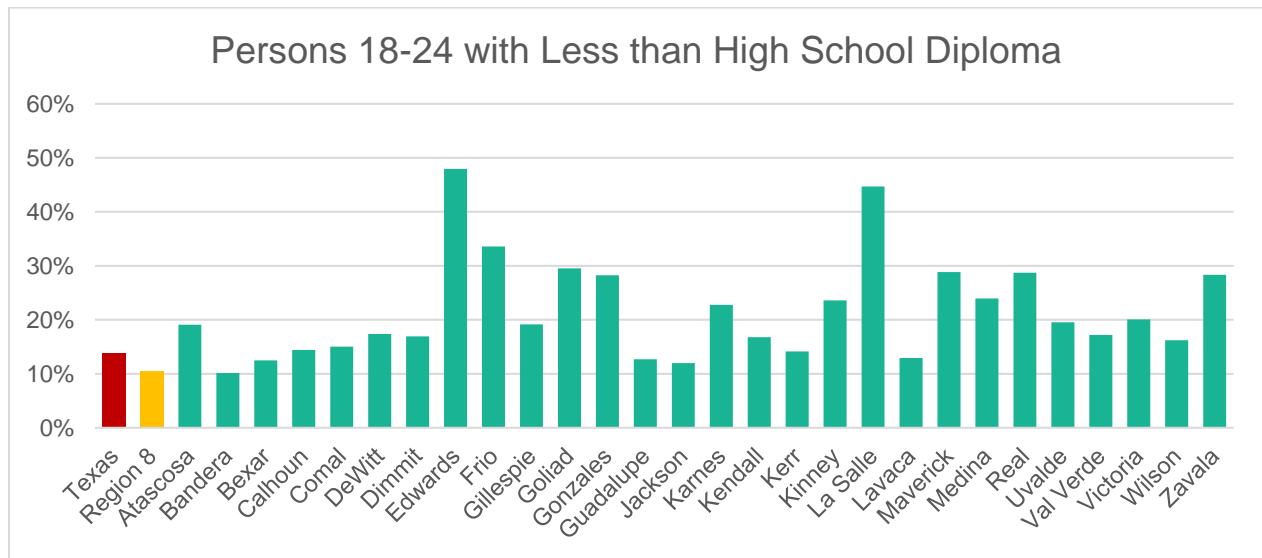

Educational Attainment of Community

Educational attainment is a predictor of well-being. Persons that have completed higher levels of education are more likely to achieve economic success than those who have not. The lack of educational attainment is associated with higher rates of substance use, lower earnings, and lower economic status that continues into adulthood. A study was conducted using the 2010 National Survey on Drug Use and Health that compared high school dropouts with graduates with respect to substance use, mental health, and criminal behavior. The findings showed that dropouts were more likely to meet criteria for nicotine dependence and to report daily cigarette use, more likely to report having attempted suicide in the previous year, and to have been arrested for larceny, assault, drug possession or drug sales relative to their high school graduate counterparts²⁵.

According to the ACS 5-Year Estimates (2018-2022), over 400,000 (13.8%) young adults between the ages of 18-24 in Texas had less than a high school education, and in Region 8, over 41,000 (10.5%).

Educational attainment of persons 18 to 24 years of age reveals that 23 of the counties in Region 8 have higher percentages of persons with less than a high school education than Texas’ 13.8 percent of persons. Counties in Region 8 ranged from 10.1 percent in Bandera County to 48.0 percent in Edwards County. See Appendix, Table 15. Region 8 Educational Attainment Age 18-24 Population (2018-2022).

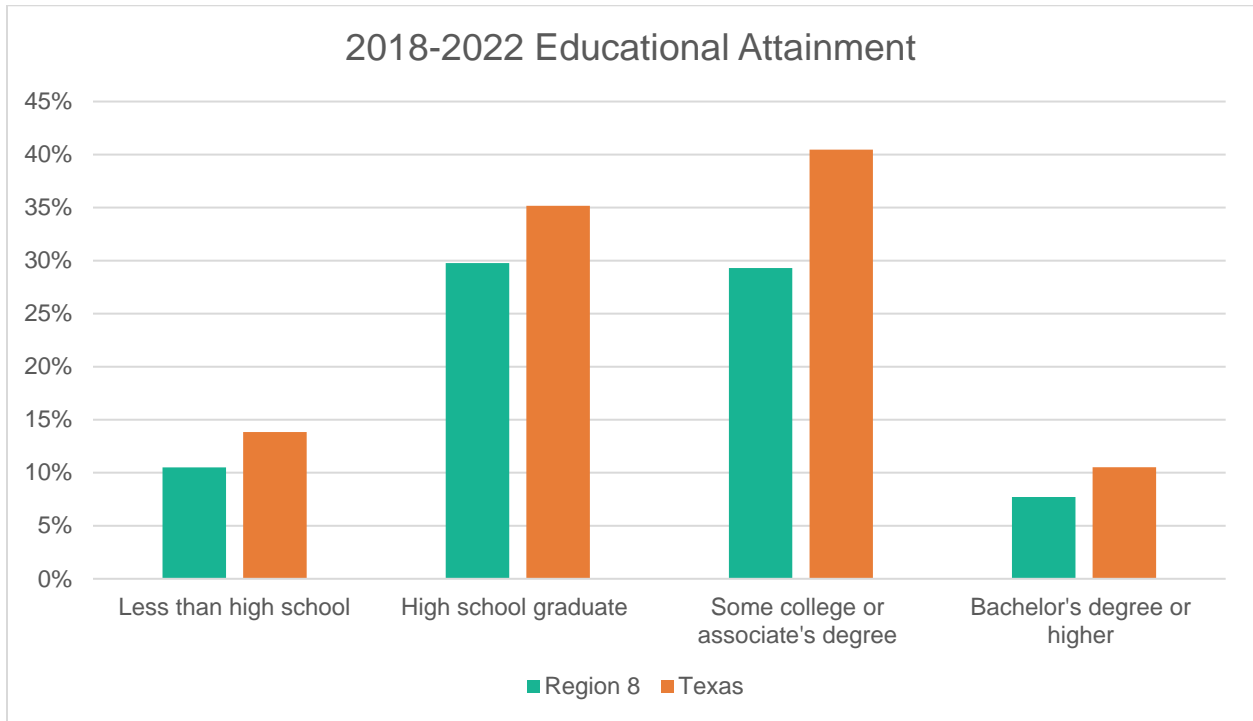

Figure 32. Persons 18-24 with Less than High School Graduate by State, Region, and County

²⁵ Maynard, B. R., Salas-Wright, C. P., & Vaughn, M. G. (2015).

Based on Region 8 estimates, 10.5 percent of persons 18 to 24 years of age have less than high school diploma, 29.8 percent are high school graduates, 29.3 percent have some college or associate degree, and 7.8 percent have a bachelor's degree or higher. Figure 33 compares the Texas and Region 8 distribution of educational attainment of persons 18 to 24 years of age.

Figure 33. 2022 Educational Attainment by Region and State

Community Conditions

Juvenile Alcohol-Related Arrests

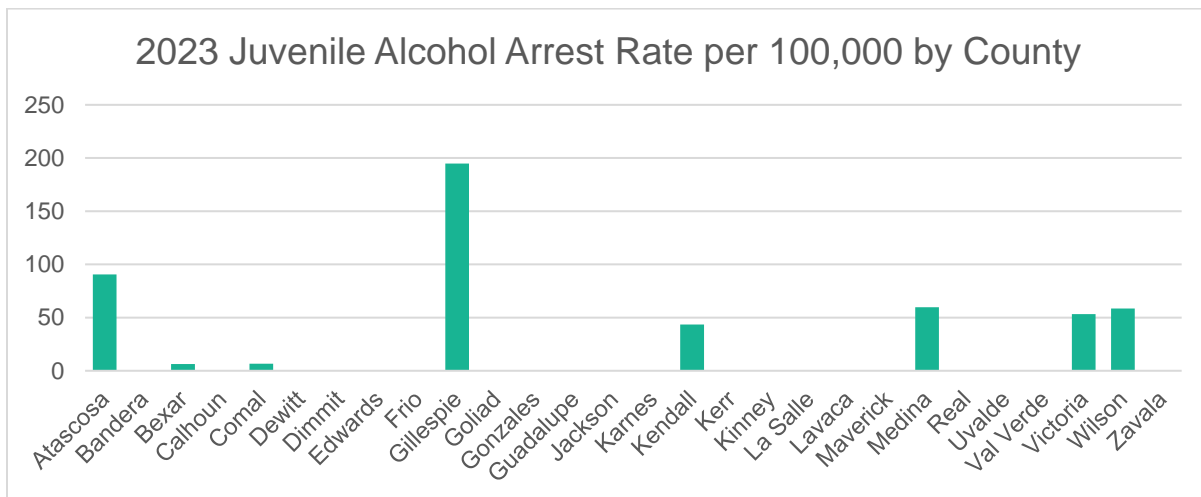

The Texas Department of Public Safety characterizes juveniles as individuals aged 10-16. In Texas, the juvenile alcohol arrest rate has decreased from 2019 to 2023 by 48.8 percent, from 25.8 arrests per 100,000 persons in 2019 to 13.2 arrests per 100,000 persons. For Region 8, the juvenile alcohol arrest rate decreased from 2019 to 2023 by 38.1 percent, from 18.9 arrests per 100,000 persons in 2019 to 11.7 arrests per 100,000 persons in 2023.

Figure 34. 2019-2023 Juvenile Alcohol Arrest Rate

In 2023, the juvenile arrest rate varied among the counties in Region 8. Gillespie County had the highest rate of juvenile alcohol arrests at 194.7 per 100,000 persons, while several Region 8 counties had zero juvenile arrests. See Appendix, Table 17. Region 8 Juvenile Alcohol Arrests 2019-2023.

Figure 35. 2023 Juvenile Alcohol Arrest Rate by County

The graph below depicts the breakdown of alcohol-related arrests for juveniles in Region 8.

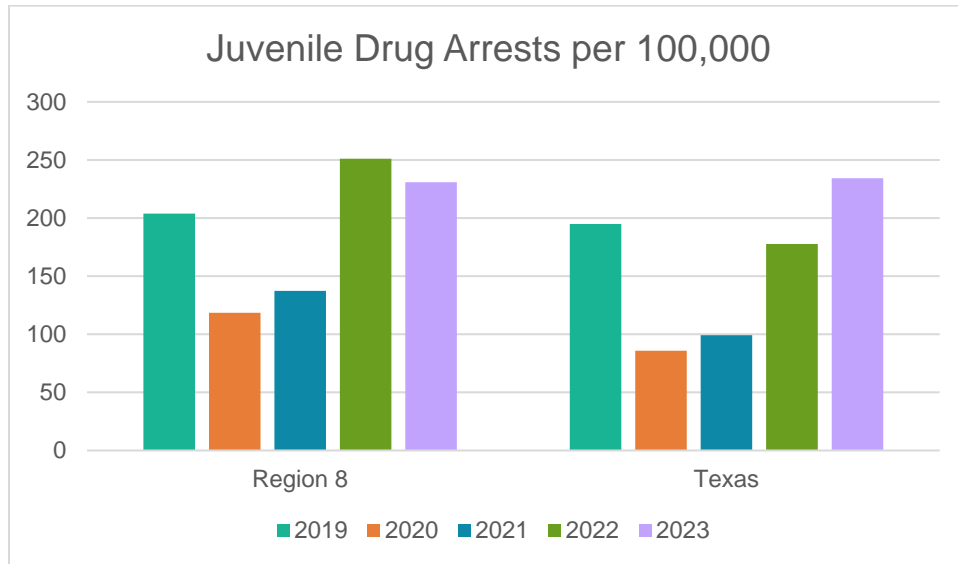

Figure 36. 2023 Juvenile Alcohol Arrest Rate by Offense

Juvenile Drug-Related Arrests

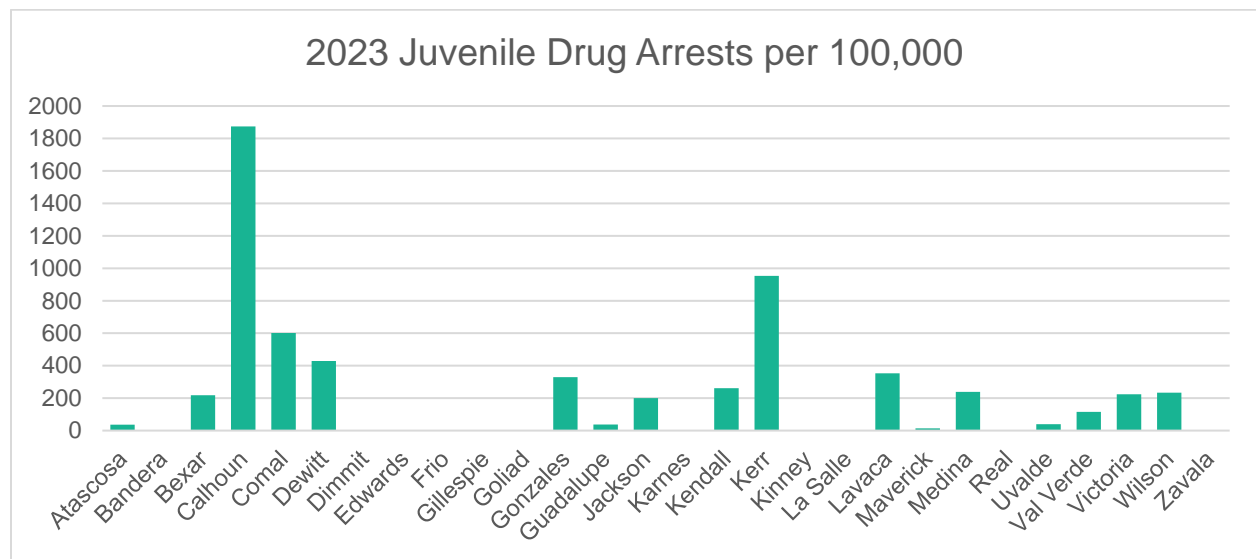

In Texas, the juvenile drug-related arrest rate has increased from 2019 to 2023 by 20.2 percent, from 194.9 arrests per 100,000 persons in 2019 to 234.3 arrests per 100,000 persons. For Region 8, the juvenile drug arrest rate increased from 2019 to 2023 by 13.2 percent, from 203.9 arrests per 100,000 persons in 2019 to 230.9 arrests per 100,000 persons in 2023.

Figure 37. 2019-2023 Juvenile Drug Arrest Rate by Region and State

In 2023, the juvenile drug arrest rate varied among the counties in Region 8. Calhoun County had the highest rate of juvenile drug arrests at 1873.7 per 100,000 persons, while several Region 8 counties had zero juvenile drug arrests.

Figure 38. 2023 Juvenile Drug Arrest Rate by County

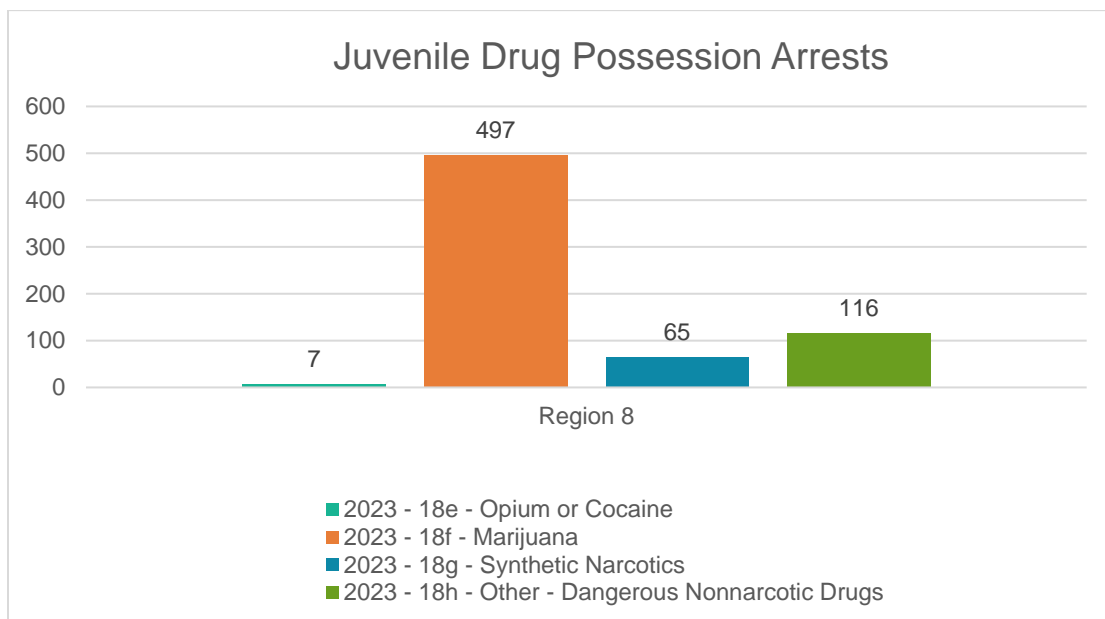

The graphs below depict both juvenile drug sale/manufacturing arrests and juvenile drug possession arrests. In Region 8 (2023), opium/cocaine were the most common sale/manufacturing arrests, with synthetic narcotics as the second most common arrest.

Figure 39. 2023 Juvenile Drug Arrest Rate by Offense

In Region 8 (2023), the most common juvenile possession drug arrests were made for marijuana, with other dangerous nonnarcotic drugs as the second most common arrests.

Figure 40. 2023 Juvenile Drug Arrest Rate by Offense

Adult Alcohol-Related Arrests

In Texas, the adult alcohol-related arrest rate has decreased from 2019 to 2023 by 46.0 percent, from 593.5 arrests per 100,000 persons in 2019 to 320.3 arrests per 100,000 persons. The Region 8 adult alcohol-related arrest rates follow the same trend. For Region 8, the adult alcohol-related arrest rate decreased from 2019 to 2023 by 67.9 percent, from 597.6 arrests per 100,000 persons in 2019 to 191.6 arrests per 100,000 persons in 2023.

Figure 41. 2019-2023 Adult Alcohol Arrest Rate by Region and State

In 2023, the adult alcohol-related arrest rate varied among the counties in Region 8. Gillespie County had the highest rate of adult alcohol-related arrests at 1111.5 per 100,000 persons, while Edwards and Kinney Counties had zero adult alcohol-related arrests. See Appendix, Table 16. Region 8 Adult Alcohol-Related Arrests 2019-2023.

Figure 42. 2023 Adult Alcohol Arrest Rate by County

The graph below depicts the breakdown of alcohol-related arrests for adults in Region 8.

Figure 43. 2023 Region 8 Adult-Alcohol Related Arrests by Offense

Adult Drug-Related Arrests

In Texas, the adult drug-related arrest rate has decreased from 2019 to 2022 by 35.9 percent, from 546.5 arrests per 100,000 persons in 2019 to 350.4 arrests per 100,000 persons. For Region 8, the adult drug-related arrest rate decreased overall from 2019 to 2023 by 59.0 percent, from 955.1 arrests per 100,000 persons in 2019 to 391.3 arrests per 100,000 persons in 2023.

Figure 44. 2019-2023 Adult Drug Arrest Rate by Region and State

In 2023, the adult drug-related arrest rate varied among the counties in Region 8. Goliad County had the highest rate of adult drug-related arrests at 1521.4 per 100,000 persons, while Gillespie and Edwards Counties had zero adult drug-related arrests. See Appendix, Table 18. Region 8 Adult Drug-Related Arrests 2019-2023.

Figure 45. 2023 Adult Drug Arrest Rate by County

The graphs below depict both adult drug sale/manufacturing arrests and adult drug possession arrests. In Region 8 (2023), other dangerous nonnarcotic drugs were the most common sale/manufacturing arrests, with opium/cocaine as the second most common arrest.

Figure 46. 2023 Adult Drug/Sale Manufacturing Arrests

In Region 8 (2023), the most common juvenile possession drug arrests were made for other dangerous nonnarcotic drugs, with marijuana as the second most common arrests.

Figure 47. 2023 Adult Drug Possession Arrests

Juvenile Violent Crime

In Texas, the juvenile violent crime rate has decreased from 2019 to 2023 by 20.1 percent, from 115.9 arrests per 100,000 persons in 2018 to 92.6 arrests per 100,000 persons. For Region 8, the juvenile violent crime rate decreased from 2018 to 2022 by 23.1 percent, from 69.0 arrests per 100,000 persons in 2019 to 58.3 arrests per 100,000 persons in 2023.

Figure 48. 2019-2023 Juvenile Violent Crime Rate by Region and State

In 2023, the juvenile violent crime rate varied among the counties in Region 8. Gonzales County had the highest rate of juvenile violent crime at 376.7 arrests per 100,000 persons, while Bandera, Dimmit, Edwards, Gillespie, Goliad, Jackson, Karnes, Kendall, Kinney, La Salle, Lavaca, Maverick, and Real Counties had zero incidents of violent crime. See Appendix, Table 21. Region 8 Juvenile Violent and Property Crime Arrests 2019-2023.

Figure 49. 2023 Juvenile Violent Crime Rate by County

Adult Violent Crime

In Texas, the adult violent crime rate has decreased from 2019 to 2023 by 12.4 percent, from 148.3 adult arrests per 100,000 persons in 2019 to 129.9 adult arrests per 100,000 persons. For Region 8, the adult violent crime rate decreased from 2019 to 2023 by 14.2 percent, from 117.6 arrests per 100,000 persons in 2019 to 100.9 arrests per 100,000 persons in 2023.

Figure 50. 2019-2023 Adult Violent Crime Rate by Region and State

In 2023, the adult violent crime rate varied among the counties in Region 8. Gonzales County had the highest rate of adult violent crime at 279.7 arrests per 100,000 persons, while La Salle County had zero incidents of violent crime. See Appendix, Table 20. Region 8 Adult Violent and Property Crime Arrests 2019-2023.

Figure 51. 2023 Adult Violent Crime Rate by County

Juvenile Property Crime

Property crime is a category of crime that includes, among other crimes, burglary, larceny, theft, motor vehicle theft, arson, shoplifting, and vandalism. Property crime is a crime to obtain money, property, or some other benefit. This may involve force, or the threat of force, in cases like robbery or extortion.

In Texas, the juvenile property crime rate has decreased from 2019 to 2023 by 25.6 percent, from 231.2 arrests per 100,000 persons in 2019 to 172.1 arrests per 100,000 persons. For Region 8, the juvenile property crime rate increased from 2019 to 2023 by 1.1 percent, from 185.0 arrests per 100,000 persons in 2019 to 187.0 arrests per 100,000 persons in 2023.

Figure 52. 2019 -2023 Juvenile Property Crime Rate by Region and State

In 2023, the juvenile property crime rate varied among the counties in Region 8. Calhoun County had the highest rate of juvenile property crime at 481.8 arrests per 100,000 persons, while Bandera, Edwards, Frio, Gillespie, Goliad, Kinney, La Salle, and Lavaca Counties had zero incidents of juvenile property crime. See Appendix, Table 21. Region 8 Juvenile Violent and Property Crime Arrests 2019-2023.

Figure 53. 2023 Property Crime Rate by County

Adult Property Crime

In Texas, the adult property crime rate has decreased from 2019 to 2023 by 11.4 percent, from 299.4 arrests per 100,000 persons in 2019 to 265.2 arrests per 100,000 persons. For Region 8, the adult property crime rate increased from 2019 to 2023 by 39.4 percent, from 213.0 arrests per 100,000 persons in 2019 to 296.9 arrests per 100,000 persons in 2023.

Figure 54. Adult Property Crime Rate by Region and State

In 2023, the adult property crime rate varied among the counties in Region 8. Maverick County had the highest rate of adult property crime at 426.6 arrests per 100,000 persons, while Edwards County had zero incidents of adult property crime. Table 20. Region 8 Adult Violent and Property Crime Arrests 2019-2023.

Figure 55. 2023 Property Crime Rate by County

Juvenile Probation

In Texas, the juvenile probation referral rate has decreased from 2019 to 2022 by 16.6 percent, from 18.7 referrals per 1,000 persons in 2019 to 15.6 referrals per 1,000 persons. For Region 8, the juvenile probation referral rate increased from 2019 to 2022 by 9.4 percent, from 21.3 referrals per 1,000 persons in 2019 to 19.3 referrals per 1,000 persons in 2022.

Figure 56. Juvenile Probation Referrals by Region and State

The graph below shows juvenile probation referrals in 2022 (total referrals and unique youth referred) for Region 8 and the two Metropolitan Statistical Areas within the region.

Figure 57. Juvenile Probation Referrals by Area

In 2022, the juvenile probation referral rate slightly varied among the counties in Region 8. Kinney County had the highest rate of juvenile probation referrals at 104 referrals per 1,000 persons, while Real County had the lowest rate at 4 referrals per 1,000 persons. See Appendix, Table 22. Region 8 Juvenile Probation Referrals 2019-2022.

Figure 58. 2022 Juvenile Probation Referrals by County

Drug Seizures

Drug seizure data provide indicators of the availability of substances in the illicit market and law enforcement engagement and is important for identifying emerging drugs and changes in drug availability. All law enforcement agencies in Texas are required to report monthly all arrests for drug offenses made and quantities of controlled substances seized. This data does not include drugs seized by federal law enforcement agencies (i.e. U.S. Bureau of Alcohol, Tobacco and Firearms, U.S. Customs and Border Protection, U.S. Drug Enforcement Administration and U.S. Federal Bureau of Investigation).

In 2023, Texas and Region 8 had the same top drug seizures: marijuana, cocaine, amphetamines, heroin, and synthetic narcotics. Table 2 below details drug seizures by description for the State and Region 8. See Appendix, Table 23. Region 8 Drug Seizures 2023.

Table 2. 2023 Drug Seizures by Region and State

2023 (Jan-Dec) State vs. Region 8 Drug Seizures by Type							
State	Description	Solid Pounds	Solid Ounces	Region	Description	Solid Pounds	Solid Ounces
Texas	Marijuana (Packaged)	5035795.0	24947.1	Region 8	Marijuana (Packaged)	1222.0	2244.9
Texas	Hashish (Solid)	924.6	1096.4	Region 8	Hashish (Solid)	2.5	32.6
Texas	Opiates (Morphine)	4.6	56.9	Region 8	Opiates (Morphine)	0.1	1.3
Texas	Opiates (Heroin)	221.1	885.9	Region 8	Opiates (Heroin)	32.5	185.5
Texas	Opiates (Gum Opium)	63.6	253.4	Region 8	Opiates (Gum Opium)	2.1	16.9
Texas	Cocaine (Solid)	6091.7	3825.4	Region 8	Cocaine (Solid)	299.7	347.9
Texas	Hallucinogens (LSD)	9.1	33.3	Region 8	Hallucinogens (LSD)	0.1	1.7
Texas	Hallucinogens (PCP)	30.5	312.1	Region 8	Hallucinogens (PCP)	0.0	0.0
Texas	Hallucinogens (Designer Drugs)	1272.9	2401.6	Region 8	Hallucinogens (Designer Drugs)	14.3	183.5
Texas	Precursor Chemicals	34.5	73.4	Region 8	Precursor Chemicals	1.0	15.4
Texas	Other Drugs (Amphetamines)	540181.1	8295.7	Region 8	Other Drugs (Amphetamines)	345.9	815.9

Region 8 Highlights for Drug Seizures:

- Marijuana seized in Region 8 accounted for less than 1 percent of the State's total solid pounds and 9 percent of the States solid ounces of marijuana. Bexar County reported the highest amount of marijuana seizures (701.3 solid pounds and 792.3 solid ounces) in Region 8.
- Amphetamines seized in Region 8 accounted for 10.3 percent of the State's solid grams of amphetamines. Bexar County reported the highest amount of amphetamine seizures (246.1 solid pounds, 338.8 solid ounces and 1326.6 solid grams) in Region 8.
- Synthetic narcotic seizures ranked third highest accounting for 21.2 percent of the States total liquid ounces of synthetic narcotics. Bexar county reported the highest amount of synthetic narcotic seizures (43542.3 liquid ounces and 2248.6 dose units) in Region 8.

Health Care/Service System

Uninsured Children

A lack of insurance can be a barrier to accessing healthcare and other health services that contribute to poor health outcomes. From 2018-2021, Region 8 has had a lower percentage of uninsured children than the State. In 2018, Region 8 had 9.3 percent of children who were uninsured, while Texas had 11.1 percent. More recently (2021), Region 8 had 10.0 percent of children who were uninsured, while Texas had 11.7 percent.

Figure 59. Uninsured Children by Region and State

Between the years of 2018-2021, Region 8 has seen an increase of 8.1 percent in uninsured children. The uninsured children less than 19 years old in Region 8 ranged from 8.7 percent in Kinney County to 19.9 percent in Edwards County. See Appendix, Table 24. Region 8 Uninsured Children >19 2018-2021.

Figure 60. 2021 Region 8 Uninsured Children by County

Uninsured Adults (19-64)

From 2018-2021, Region 8 has had a lower percentage of uninsured adults than the State. In 2018, Region 8 had 22 percent of uninsured adults, while Texas had 23.9 percent. More recently, in 2021, Region 8 had 22.9 percent of uninsured adults, while Texas had 24.2 percent.

Figure 61. Uninsured Adults by Region and State

Between the years of 2018-2021, Region 8 has seen an increase of 7.2 percent in uninsured adults. The percentage uninsured adults in Region 8 ranged from 16.8 percent in Comal County to 36.9 percent in Maverick County. See Appendix, Table 25. Region 8 Uninsured Adults (19-64) 2018-2021.

Figure 62. 2021 Region 8 Uninsured Adults by County

Retail Access

Alcohol Retail Density

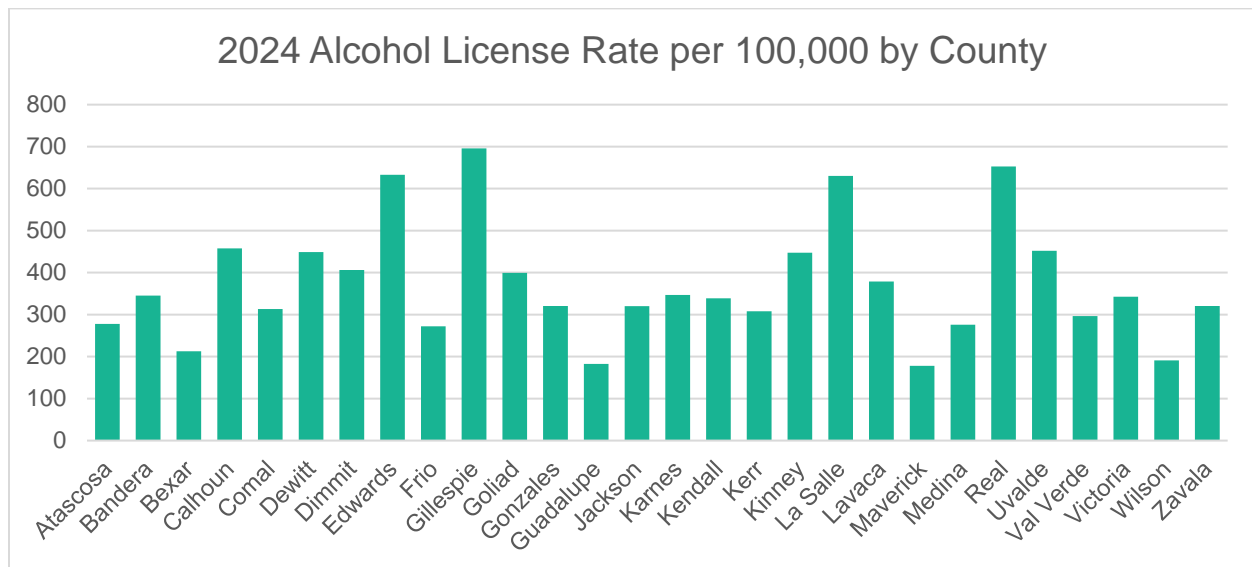

The number and density of bars, taverns and liquor stores in communities has been shown to correlate with alcohol-related problems such as assault, traffic crashes, injury, and suicide. Areas with higher concentrations of alcohol outlets (per capita) have higher concentrations of alcohol-related problems²⁶.

Figure 63. Alcohol Retail Density by Region and State

In 2024, the rate for alcohol permits per 100,000 population in Region 8 was 242.9, higher than the Texas rate of 222.2. In 2024, Region 8 counties ranged from 177.9 permits per 100,000 population in Maverick to 695.9 permits per 100,000 in Gillespie. See Appendix, Table 26. Region 8 Alcohol Retail Density 2018-2024.

Figure 64. 2024 Region 8 Alcohol Retail Density by County

²⁶ Zhang, X., et al. (2015).

Tobacco Retail Density

Higher retail density has been associated with higher rates of youth initiation and smoking, as well as lower rates of quitting²⁷.

Figure 65. Tobacco Retail Density by Region and State

The 2024 Region 8 Tobacco Permit Density was 115.1 per 100,000 persons, lower than the Texas rate of 126.9. Counties ranged from 101.9 per 100,000 persons in Maverick to 580.13 in Real. See Appendix, Table 27. Region 8 Tobacco Retail Density 2018-2024.

Figure 66. 2024 Region 8 Tobacco Retail Density by County

²⁷ Ackerman, A., et al. (2017).

E-Cigarette Retail Density

Higher retail density has been associated with higher rates of youth initiation and smoking, as well as lower rates of quitting²⁸.

Figure 67. E-Cigarette Retail Density by Region and State

The 2024 Region 8 E-Cigarette Permit Density was 71.6 per 100,000 persons, lower than the Texas rate of 80.6. Counties ranged from 44.1 per 100,000 persons in Val Verde to 217.6 in Real. See Appendix, Table 28. Region 8 E-Cigarette Retail Density 2018-2024.

Figure 68. 2024 E-Cigarette Retail Density by County

²⁸ Ackerman, A., et al. (2017).

School Conditions

Students Offered Drugs

The Youth Risk Behavior Surveillance Survey (YRBSS) asks questions about substance related behaviors on school campus. On the YRBSS, students report whether they have been offered, sold, or given illegal drugs on their school campus. This indicator gives insight into access and availability of substances to students, as well as health behaviors.

Between 2001 to 2021, the graph shows specific peaks in the percentage of students, specifically in: 2005, 2011, and 2019. Despite the peaks in the percentage of students throughout the years, overall, this did not lead to a historical increase; there has been a 11% decrease from 2001 to 2021. From 2019 to 2021, there has been a significant decrease in students offered, sold, or given drugs on school property, however this sharp decrease may in part be explained by the COVID-19 pandemic in which students were not on campus.

Figure 69. Students Offered, Sold, or Given Drugs on School Property

In 2021, nearly 1 in 5 students (17.4%) Texas students were offered or given an illegal drug on school property (during the 12 months before the survey). In this same year, 16.9 percent of male students were offered, sold, or given drugs on school property. Tenth graders were the most likely to be offered, sold, or given drugs as 18.7 percent of students reported so.

Figure 70. Students Offered, Sold, or Given Drugs on School Property Demographics

Substance Use Infractions

The Texas Education Agency (TEA) provides data on substance use discipline infractions in Texas schools. This indicator gives insight into what substances youth are receiving school level disciplinary infractions for.

During the 2022-2023 school year, student substance use infractions were overwhelmingly because of controlled substances/drugs, with Region 8 showing that 2,172.2 students per 100,000 were receiving infractions for this. In comparison to the state, Region 8 reports higher rates of substance use infractions as seen below in Figure 71. See Appendix, Table 29. Substance Use Infractions 2018-2023.

Figure 71. 2022-2023 Substance Use Infractions by Region and State

Protective Factors

Social Associations

Poor family support, minimal contact with others, and limited involvement in community life are associated with increased morbidity and early mortality. Furthermore, social support networks have been identified as powerful predictors of health behaviors, suggesting that individuals without a strong social network are less likely to make healthy lifestyle choices than individuals with a strong network. A study found that people living in areas with high levels of social trust are less likely to rate their health status as fair or poor as opposed to people living in areas with low levels of social trust. Researchers have argued that social trust is enhanced when people belong to voluntary groups and organizations because people who belong to such groups tend to trust others who belong to the same group²⁹.

The rate of social associations per 10,000 persons has slowly declined in Region 8 between the years 2018-2024. From 2018 to 2024 the rate of social associations has essentially stayed the same with a .01% decrease.

Figure 72. Social Associations rate per 10,000 by Region and State

The 2023 social associations rate per 10,000 was lower in Region 8 (6.9 per 10,000) than in Texas (7.4 per 10,000). Region 8 county rates ranged from 0.0 in Kinney County to 27.8 in Edwards County. See Appendix, Table 30. Region 8 Social Associations 2018-2024.

²⁹ Subramanian, S. V., Kim, D. J., & Kawachi, I. (2002).

Figure 73. 2024 Region 8 Social Associations rate per 10,000 by County

Prescription Drug Monitoring Program

A prescription drug monitoring program (PDMP) is an electronic database that tracks controlled substance prescriptions. PDMPs can help identify patients who may be misusing prescription opioids or other prescription drugs and who may be at risk for overdose.

From 2020 to 2023, the total number of prescriptions for Schedule II drugs in Region 8 has increased by 8.7 percent. Schedule II drugs dispensed has also increased in the state as a whole. The amount of Schedule III and IV drugs has decreased from 2020-2023 in the region. See Figure 74 for more details.

Figure 74. Prescription Drug Monitoring by Region and State

The rate of Schedule II drugs dispensed in Region 8 was 43,126.8 per 100,000 persons, lower than Texas rate of 45,176.8 per 100,000 persons in 2023. Schedule II drugs, substances, or chemicals are defined as drugs with a high potential for misuse, with use potentially leading to severe psychological or physical dependence. It is important to note while schedule II drugs can be dangerous and have negative consequences, many of these are commonly prescribed and are effective treatments for various mental health conditions and substance use disorders. Some examples of Schedule II drugs are Combination products with less than 15 milligrams of hydrocodone per dosage unit (Vicodin), cocaine, methamphetamine, methadone, hydromorphone (Dilaudid), meperidine (Demerol), oxycodone (OxyContin), fentanyl, Dexedrine, Adderall, and Ritalin.

The rate of Schedule III drugs dispensed in Region 8 was 14,571.4 per 100,000 persons, lower than Texas’ rate of 16,209.5 per 100,000 persons. Schedule III drugs, substances, or chemicals are defined as drugs with a moderate to low potential for physical and psychological dependence. Schedule III drugs misuse potential is less than Schedule I and Schedule II drugs but more than Schedule IV. Some examples of Schedule III drugs are Products containing less than 90 milligrams of codeine per dosage unit (Tylenol with codeine), ketamine, anabolic steroids, and testosterone.

The rate of Schedule IV drugs dispensed in Region 8 was 4,861.5 per 100,000 persons, higher than Texas’ rate of 4,780.6 per 100,000 persons. Schedule IV drugs, substances, or chemicals are defined as drugs

with a low potential for misuse and minimal risk of dependence. Some examples of Schedule IV drugs are Xanax, Soma, Darvon, Darvocet, Valium, Ativan, Talwin, Ambien, Tramadol.

The rate of Schedule V drugs dispensed in Region 8 was 7125.8 per 100,000 persons, higher than Texas’ rate of 6557.8 per 100,000 persons. Schedule V drugs, substances, or chemicals are defined as drugs with lower potential for misuse than Schedule IV and consist of preparations containing limited quantities of certain narcotics. Schedule V drugs are generally used for antidiarrheal, antitussive, and analgesic purposes. Some examples of Schedule V drugs are cough preparations with less than 200 milligrams of codeine or per 100 milliliters (Robitussin AC), Lomotil, Motofen, Lyrica, Parepectolin.

As previously discussed, Schedule II drugs have a high potential for misuse, that can lead to severe psychological or physical dependence. In 2023, Region 8 counties ranged from 18097.2 per 100,000 persons in Zavala to 192501.6 persons per 100 in Kerr. Edwards and Real Counties do not have data available. See Appendix, Table 31. Region 8 Prescription Drug Monitoring Program 2020-2023.

Figure 75. 2023 Region 8 Schedule II Drugs Dispensed by County

Mental Health Providers

Access to care requires not only financial coverage, but also access to providers. In the wake of the COVID-19 pandemic and its many long-lasting effects, access to mental health care is imperative. From 2018 to 2024, Texas has seen a 58.6 percent increase in mental health providers. In 2024, Region 8 had an average of 85.4 mental health providers per 100,000 persons³⁰.

Figure 76. Texas Mental Health Providers Rate per 100,000

In 2024, the rate of mental health providers in Region 8 counties varied. In Karnes County, there are 13.0 mental health providers per 100,000 persons, whereas in Kerr County there are 337.0 mental health providers per 100,000 persons. See Appendix, Table 32. Region 8 Mental Health Providers 2018-2024.

Figure 77. 2024 Region 8 Mental Health Providers Rate per 100,000 by County

³⁰ Note: This is not a true regional rate, as some counts are suppressed. The data displayed is a regional average.

Risk and Protective Factors: Interpersonal Domain

Family Environment

Family Violence Crime Rate

The Texas Family Code defines Family Violence as an act by a member of a family or household against another member that is intended to result in physical harm, bodily injury, assault, or a threat that reasonably places the member in fear of imminent physical harm. The law excludes the reasonable discipline of a child and defines abuse as physical injury that results in substantial harm or genuine threat; sexual contact, intercourse, or conduct; or compelling or encouraging the child to engage in sexual conduct.

The 2023 Texas family violence rate was 687.1 incidents per 100,000 persons, while the Region 8 rate was much higher at 743.9 per 100,000 persons. From 2018 to 2023, Region 8 saw a 10.8 percent increase in the number of family violence incidents.

Figure 78. 2018-2023 Family Violence Rate by Region and State

The 2022 family violence rates ranged from 63.9 incidents per 100,000 persons in Kinney County to 896.9 incidents per 100,000 persons in Victoria County. County-level data is available in Appendix, Table 33. Region 8 Family Violence Incidents 2018-2023.

Figure 79. 2018-2023 Family Violence Rate by Region and State

Victims of Maltreatment

In 2023, the total number of confirmed victims in Texas was 58,114 or 798.4 per 100,000 children. In 2023, Region 8 had a 4.8 percent decrease in the number of confirmed victims of maltreatment from 7074 or 958.5 per 100,000 children in 2022 to 6736 or 912.7 per 100,000 children.

Figure 77. Victims of Maltreatment by Region and State

Region 8 counties ranged from 336.6 victims per 100,000 children in Kendall to 2310.9 per 100,000 in Real. See Appendix, Table 28. Region 8 Victims of Maltreatment 2018-2022.

Figure 78. Region 8 Victims of Maltreatment by County

Children in Foster Care

Substance use tends to escalate across adolescence and into young adulthood and can be intensified by experiences with trauma and maltreatment, mental illness, and exposure to parental alcohol and drug use. Children in foster care experience these variables at a disproportionate level than at those of their peers not in foster care³¹. The rates of foster children per 100,000 are much higher in Region 8 than in Texas, however they have decreased 40.6 percent from 2018 to 2023. In 2023, Region 8 had a rate of 310.8 children in foster care per 100,000 children.

Figure 79. Children in Foster Care Rate per 100,000 by Region and State

Region 8 counties greatly varied in the rate of children in foster care per 10,000 children. In 2023, Edwards County had zero children in foster care, while Frio County had a rate of 734.5 children in foster care per 100,000 children. See Appendix, Table 35. Region 8 Children in Substitute Care 2018-2023.

³¹ Braciszewski, J. M., & Stout, R. L. (2012).

Figure 8o. 2023 Region 8 Children in Foster Care Rate per 100,000 by County

Parental Depression

Parental depression has been associated with negative health outcomes in children, in both physical and mental health. Depression in parents is more likely to be associated with adverse outcomes in children with the presence of additional risk factors (e.g., poverty, exposure to violence, marital conflict, comorbid psychiatric disorders, absence of father when the mother has depression, and clinical characteristics of the depression, such as severity and duration) than with depression that occurs in the context of more protective factors³².

Parental depression in this dataset is considered the percentage of adults over 18 who report that a doctor, nurse, or other health professional has ever told them that they have a depressive disorder including depression, major depression, dysthymia, or minor depression. In Texas, the percentage of adults who reported this is 22.8. In Region 8, the percentage of adults who reported this is 21.9³³. Although this is not data that is specific to rates of depression in parents only, research shows that adult depression rates reflect the rates of parental depression.³⁴

In Region 8 counties, the percentage of adults reporting a depressive disorder remained similar throughout all areas. In La Salle County, 19.3 percent of adults reported this, while in Real County, 24.6 percent reported as such in 2021.

³² Parenting Practices National Research Council (US) and Institute of Medicine (US) Committee on Depression, England, M. J., & Sim, L. J. (2009).

³³ This is a regional average and does not reflect a true regional rate.

³⁴ National Research Council and Institute of Medicine, 2009

Figure 81. Region 8 Adult Depression by County

Perceptions of Parental Attitudes

Parental Disapproval of Alcohol, Tobacco, and Marijuana

In 2022, Texas Health and Human Services Commission (HHSC), in conjunction with the Public Policy Research Institute (PPRI) at Texas A&M University, conducted its biennial Texas School Survey of Substance Use (TSS). The survey collects self-reported tobacco, alcohol, and substance use data among students in grades 7 through 12 in Texas public schools. The chart below displays students’ perception of how their parents strongly disapprove about kids their age using alcohol versus what they report as ever used. Alcohol was reported as the substance with the least parental disapproval and as the substance most ever used.

Students that perceive their parents would strongly disapprove of their using specific substances were less likely to use these substances, for example, in 2022, 83 percent of students perceive that their parents would strongly disapprove of their tobacco use and only 12.6 percent of students used in the past month. For alcohol, the perception of parents’ strong disapproval was much lower at 70 percent and with a much higher rate of 24.7 percent of students used in the past month. Marijuana (79%) also had higher rates for parental disapproval and less marijuana (13.7%) use.

Figure 82. 2022 TSS Parental Disapproval vs Past Month Use

For alcohol and marijuana, students’ perception of parental disapproval had decreased from 2018 to 2022. However, students’ perception of parental disapproval for tobacco has slightly increased during this time. See Figure 75 below.

Figure 83. 2018-2022 TSS Parental Disapproval

Perceptions of Peer Use

Friends Who Use Alcohol, Tobacco, and Marijuana

People that are of the same age, with the same experiences and interests often influence each other’s choices and behaviors. As youth become more independent, their peers begin to play a bigger role because they spend more time with them than they do with their parents or siblings. As students advance through middle school and high school, they are more likely to report peer approval of tobacco, alcohol, marijuana, and other drugs. Research has shown that a predictor for substance misuse and other problem behaviors is the association with friends³⁵.

The 2018 TSS asked students “About how many of your close friends use tobacco, alcohol or marijuana”. The perception that peers are using substances increases with each grade level, except for 12th grade. All perceptions of peer use data are defined as the percentage of students who answered that “a few friends”, “some friends”, “most friends”, or “all friends” are using Alcohol, Tobacco, or Marijuana. This data is depicted in Figure 84, and Tables 3, 4, and 5.

Figure 84. 2018-2022 TSS Perceptions of Peer Use

Some of the strongest influences on children are their family and friends. Studies have shown that higher levels of substance use among peers is associated with increased substance use of adolescents and young adults. Peer pressure, peer substance use norms, and socializing with substance-using peers has been associated with substance misuse³⁶.

In the 2022 Region 8 TSS,

- 21.4 percent of students perceived that their friends used tobacco when only 15.6 percent reported tobacco use in the school year.

³⁵ Farrell, A. D., Thompson, E. L., & Mehari, K. R. (2017).

³⁶ Sudhinaraset, M., Wigglesworth, C., & Takeuchi, D. T. (2016).

- 42.4 percent of students perceived at least a few of their friends used alcohol when only 29.2 percent reported alcohol use in the school year.
- 36 percent of students perceived at least a few of their friends used marijuana when only 15.5 percent reported marijuana use in the school year. More than two times fewer than the students perceived as using marijuana.

Table 3. 2022 TSS Perceptions of Peer Use vs Past School Year: Tobacco

Indicator	7th	8th	9th	10th	11th	12th	All
Tobacco							
Perception of Peer Use	11.70%	16.60%	20.90%	25.40%	27.40%	32.60%	21.40%
Past School Year Use	8.80%	12.40%	12.50%	20.60%	23.40%	20.40%	15.60%

Table 4. 2022 TSS Perceptions of Peer Use vs Past School Year: Alcohol

Indicator	7th	8th	9th	10th	11th	12th	All
Alcohol							
Perception of Peer Use	24.70%	36.40%	38.30%	52.60%	57.70%	54.80%	42.40%
Past School Year Use	20.10%	27%	21.90%	33.40%	41.60%	37.80%	29.20%

Table 5. 2022 TSS Perceptions of Peer Use vs Past School Year: Marijuana

Indicator	7th	8th	9th	10th	11th	12th	All
Marijuana							
Perception of Peer Use	17.20%	26.70%	31.00%	48.60%	53.10%	51.10%	36.00%
Past School Year Use	7.10%	11%	11.20%	21.60%	25.20%	23.20%	15.50%

Perceived Substance Availability

Social Access

The Texas School Survey asks students about their perceived access to specified substances, data shown in this section is specifically regarding the percentage of students who reported that the substances were “somewhat” or “very easy” to get.

From 2018 to 2022, there was a decrease in perceived access to alcohol, tobacco, and marijuana. Among alcohol, tobacco, and marijuana, students reported that alcohol was the most easily accessible.

Figure 85. 2018-2022 TSS Accessibility to Alcohol, Tobacco, and Marijuana

Access to Alcohol

In the 2022 TSS, 38.9 percent of 8th graders said alcohol would be “somewhat” to “very easy” to get, versus 40.4 percent of 9th graders and 52.3 percent of 12th graders. There was a 3.9 percent increase in the perception of access from Middle School (8th Grade) to High School (9th Grade), while there was a 14.8 percent decrease in past month alcohol use. These increases are depicted in Figure 86.

Figure 86. 2022 TSS Accessibility to Alcohol vs Current Use

Access to Tobacco

In the 2022 TSS, 18.5 percent of 8th graders said tobacco would be “somewhat” to “very easy” to get, versus 22.7 percent of 9th graders and 34.3 percent of 12th graders. The perception of tobacco access increases 22.7 percent from Middle School (8th Grade) to High School (9th Grade) as well as a 2.9 percent increase in past month tobacco use from 10.2 percent in Middle School (8th grade) to 10.5 percent in High School (9th grade).

Figure 87. 2022 TSS Accessibility to Tobacco vs Current Use

Access to Marijuana

In the 2022 TSS, 18.6 percent of 8th graders said marijuana would be “somewhat” to “very easy” to get, versus 26.3 percent of 9th graders and 42.1 percent of 12th graders. The perception of marijuana access increases 41.4 percent from Middle School (8th Grade) to High School (9th Grade) as well as a 2.2 percent increase in past month marijuana use from 9.1 percent in 8th grade to 9.3 percent in 9th grade.

Figure 88. 2022 TSS Accessibility to Marijuana vs Current Use

Presence of Substances at Parties

Alcohol at Parties

Alcohol is the most used substance among youth and most underage drinkers get alcohol socially from house parties and friends. In Region 8, nearly half (46.6%) of the students in 7-12th grade have ever used alcohol. Youth and young adults are particularly vulnerable to alcohol related harms. House parties have severe and negative consequences like injury or death from car crashes, interpersonal violence (fighting and sexual assault), accidental injuries, impaired thinking, risky sexual activity, and alcohol poisoning.

Figure 8g. 2022 TSS Alcohol Availability at Parties

Young people report drinking mostly in social settings due to their inability to purchase alcoholic beverages. Strategies enforcing and limiting these types of social gatherings/parties include policies such as the Social Host Ordinance. San Antonio’s Social Host Ordinance went into effect in June 2017 as an effort to curb underage drinking at house parties. The Social Host Ordinance holds a homeowner and/or private property owner, or renter, responsible when they supply minors with the environment to drink alcohol. By imposing civil fines with each violation, the goal is to discourage underage drinking parties. The first violation is a penalty of \$300, with second and subsequent penalties totaling \$500. Cost recovery for public safety response may also be imposed on second and subsequent violations. Violations can only be issued/ordinance enforced when San Antonio Police Department (SAPD) officers are called.

The Circles of San Antonio Community Coalition continues to work closely with the SAPD to work on enforcement of the ordinance. The Coalition is also working to enhance the public’s knowledge of underage drinking harms and to educate parents or guardians about the Social Host Ordinance itself. Cities that have passed similar ordinances have seen a reduction in the frequency and size of underage drinking parties and have less calls for law enforcement over time.

According to the TSS in 2022, 19.9 percent of all students reported that alcohol was present at parties they attended. The percentage of students reporting alcohol at parties increases with grade level in both high school (9-12) and middle school (7-8).

Marijuana and/or Other Drugs

As previously mentioned, youth substance use may be perpetuated by peer pressure and norms. Parties at which marijuana and illicit drugs are used may be especially troublesome for several reasons, including providing access to these substances to youth who might otherwise not use them, contributing to or reinforcing unhealthy norms about substance use, and first- or second-hand consequences associated with substance use³⁷.

In the 2022 TSS, 13.5 percent of students in Region 8 grades 7-12 reported that marijuana and/or other drugs were present at parties. With each increase in grade level, the percentage of this occurrence also increased. From 7th grade to 12th grade, there was a 465.1 percent increase in students reporting marijuana and/or other drugs at parties. From 2018 to 2022, 12th grade alone, students reporting drugs at parties decrease by almost 50%.

Figure 90. 2022 TSS Marijuana and/or Other Drugs Availability at Parties

³⁷ Egan, K. L., et al. (2019).

Individual Domain

Academic Achievement

High School Dropout Rates

Texas four-year longitudinal dropout rate for the class of 2022 was 6.4 percent, 0.6 points higher than the dropout rate in 2021. In Region 8, the four-year longitudinal dropout rate for the class of 2022 was 6.8 percent, 0.6 points higher than the dropout rate in 2021.

Figure 91. High School Dropout Rate by Region and State

In 2022, county dropout rates ranged from 0% in Edwards County to 18.6% in Karnes County. County level data is available in Appendix, Table 36. Region 8 Dropout Rates 2020-2022.

Figure 92. 2022 High School Dropout Rate by County

Average Daily Attendance

Students who are repeatedly absent from school miss out on educational opportunities, building their social skills, and other benefits school has to offer. Studies have shown that substance use among adolescents is associated with lower grades, lower scores on measures of academic functioning, a greater likelihood of skipping school and dropping out of high school, and a lower likelihood of enrolling in college³⁸. Lower academic performance may have a direct relationship with skipping school for some students. For the 2021-22 school year, the average daily attendance in Region 8 was 90.9 percent, which was lower than the Texas average of 91.6 percent.

Figure 93. 2017-2022 Average Absences per Student by Region and State

Ten of the Region 8 counties had a higher average daily attendance per student than the Texas average for the 2021-22 school year. Average attendance for Region 8 counties ranged from 87 percent in Uvalde County to 94.2 percent in Kendall County. See Appendix, Table 37. Region 8 Average Daily School Attendance 2017-2022.

³⁸ Bugbee, B. A., et al. (2019).

Figure 94. 2021-22 Average Absences per Student by County

Youth Mental Health

Adolescent Depression

Mental health disorders are some of the major contributing factors of youth substance use. Studies found that people with a mental disorder, such as anxiety, depression, or post-traumatic stress disorder (PTSD), may use drugs or alcohol as a form of self-medication. However, although some drugs may temporarily help with some symptoms of mental disorders, they may make the symptoms worse over time³⁹.

The Texas Youth Risk Behavior Surveillance Survey (YRBSS) collects data on students who are feeling sad and hopeless. The YRBSS indicator for adolescent depression designates the percentage of students who felt sad or hopeless almost every day for two weeks or more in a row that they stopped doing some usual activities during the past 12 months.

The percentage of adolescents in Texas that reported they felt sad or hopeless increased by 30.4 percent from 2017 to 2021.

³⁹ National Institute of Mental Health. (2023).

Figure 95. 2017-2021 Texas Adolescent Depression

In 2021, 57.2 percent of female high school students reported that they felt sad or hopeless, while 32.1 percent of male high school students reported as such. Tenth grade had the highest percentage (48.3%) of sad or hopeless students in 2021 out of 9th-12th grades.

Figure 96. 2017-2021 Texas Adolescent Depression by Demographics

Youth Perception of Risk/Harm

The perception of risk (danger) associated with drug use has been established as a key factor in the decision of whether to use a drug or not. Perception of harm in this data is the percentage of students that report these substances to be either “very dangerous” or “somewhat dangerous” on the TSS. From 2018 to 2022, Region 8 students reported an increased perception of risk/harm for tobacco, marijuana, e-cigarettes, and alcohol. However, Region 8 students reported a slight decrease in their perception of risk/harm for prescription drugs between 2018 and 2022, as shown in Figure 97 below.

Figure 97. 2018-2022 Region 8 Perception of Harm by Substance

Perception of Risk/Harm: Alcohol

As students progress through school with their peers, more independence and socializing may influence their decrease in perception of harm. In the 2022 Region 8 TSS, 76.9 percent of 8th graders said alcohol was “somewhat dangerous” to “very dangerous” to use, versus 77.0 percent of 9th graders and 77.1 percent of 12th graders. The perception of alcohol’s risk of harm increased from Middle School (8th – 76.9%) to High School (9th – 77%) and decreased in past month alcohol use from 23 percent in 8th grade to 19.6 percent in 9th grade. Eleventh grade students reported the highest perception of risk but had the highest percentage of past month use for alcohol.

Figure 98. 2022 Region 8 Perception of Harm vs Past Month Use by Grade Level: Alcohol

Perception of Risk/Harm: Tobacco

In the 2022 TSS, 87.2 percent of 8th graders said any tobacco product was “somewhat dangerous” to “very dangerous” to use, versus 84 percent of 9th graders and 77.1 percent of 12th graders. The perception of risk/harm for tobacco decreased from Middle School (8th – 87.2%) to High School (9th – 84%) and increased in past month tobacco use from 10.2 percent in 8th grade to 10.5 percent in 9th grade.

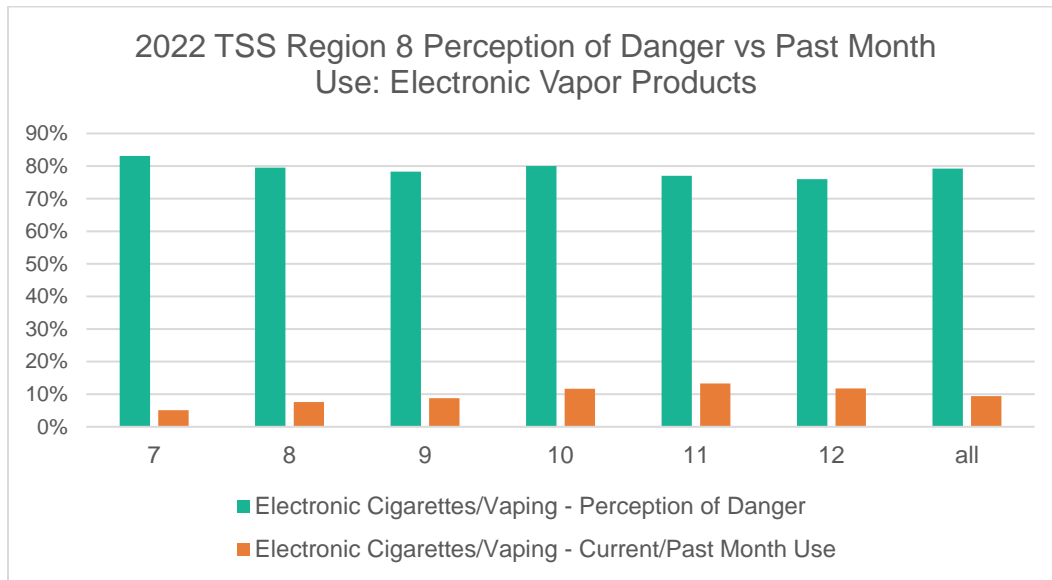

Figure 99. 2022 Region 8 Perception of Harm vs Past Month Use by Grade Level: Tobacco

Perception of Risk/Harm: Electronic Vapor Products

In the 2022 TSS, 79.5 percent of 8th graders said any electronic vapor product was “somewhat dangerous” to “very dangerous” to use, versus 78.3 percent of 9th graders and 76 percent of 12th graders. The perception of risk/harm for any electronic vapor product decreased from Middle School (8th – 79.5%) to High School (9th – 78.3%) and increased in past month E-Vapor use from 7.6 percent in 8th grade to 8.8 percent in 9th grade.

Figure 100. 2022 Region 8 Perception of Harm vs Past Month Use by Grade Level: E-Cigarettes

Perception of Risk/Harm: Marijuana

In the 2022 TSS, 78.9 percent of 8th graders said marijuana was “somewhat dangerous” to “very dangerous” to use, versus 74.6 percent of 9th graders and 51.1 percent of 12th graders. The perception of any marijuana risk of harm decreased from Middle School (8th – 78.9%) to High School (9th – 74.6%) and increased in past month marijuana use from 9.1 percent in 8th grade to 9.3 percent in 9th grade. Additionally, as the grades progress, there is a decrease in perception of harm and an increase in current/past month use, with the exception of a small decrease in use in 12th grade. From 7th grade to 12th grade, there is almost a 30% decrease in perception of risk/harm of marijuana use.

Figure 101. 2022 Region 8 Perception of Harm vs Past Month Use by Grade Level: Marijuana

Perception of Risk/Harm: Prescription Drugs

In the 2022 TSS, 84.3 percent of 8th graders said any prescription drug not prescribed to them was “somewhat dangerous” to “very dangerous” to use, versus 85.5 percent of 9th graders and 84.8 percent of 12th graders. The perception of risk/harm for any prescription drug not prescribed increased from Middle School (8th – 84.3%) to High School (9th – 85.5%) and decreased in past month prescription drug use from 6.3 percent in 8th grade to 6.2 percent in 9th grade.

Figure 102. 2022 Region 8 Perception of Harm vs Past Month Use by Grade Level: RX

Early Initiation of Use

Age of First Use: Alcohol

In the 2022 TSS, the average age of first use for any alcohol product in Region 8 was 12.5, younger than the state average age of 12.8. In 2022, the age of first use for alcohol decreased in each grade from 2018 to 2022.

Figure 103. 2018-2022 Region 8 Age of First Use by Grade Level: Alcohol

Age of First Use: Tobacco

According to the 2014 Surgeon General’s Report (SGR), nearly 9 out of 10 adult smokers started before age 18, and nearly all started by age 26. The report estimates that about 3 out of 4 high school smokers will become adult smokers – even if they intend to quit in a few years.

In the 2022 TSS, the average age of first use for any tobacco product in Region 8 was 12.7, younger than the state average age of 13. For high school students (9th-12th grade) in Region 8, the average age of first use decreased for each grade level from 2018 to 2022. From 2018 to 2022, the overall average first age of use decreases by an entire year.

Figure 104. 2018-2022 Region 8 Age of First Use by Grade Level:

Age of First Use: Marijuana

In the 2022 TSS, the average age of first use for marijuana in Region 8 was 13.6, younger than the state average age of 14.1. For high school students (9th-12th grade) in Region 8, the average age increased for each grade level from 2018 to 2022.

Figure 105. 2018-2022 Region 8 Age of First Use by Grade Level: Marijuana

Age of First Use: Any Illicit Drugs

In the 2022 TSS, the average age of first use for any illicit drug in Region 8 was 13.5, younger than the state average age of 13.9. For high school students (9th-12th grade) in Region 8, the average age increased for each grade level from 2018 to 2022.

Figure 106. 2018-2022 Region 8 Age of First Use by Grade Level: Any Illicit Drug

Protective Factors

High School Graduation

As previously mentioned in this report, dropping out of high school is a major risk factor for substance use. Research has shown that substance use among high school dropouts is greater than that of high school graduates, which suggests that high school graduation is a protective factor for adolescent substance use⁴⁰.

In 2022, the Region 8 average graduation rate was 92.8 for all students. Economically disadvantaged students had a lower graduation rate for all years 2018 through 2022. The economically disadvantaged graduation rate in 2021 90%⁴¹. For county-level data, see Appendix, Table 38. Region 8 Graduation Rates 2018-2022.

⁴⁰ Tice, P., Lipari, R. N., & Van Horn, S. L. (2017).

⁴¹ Note: This is not a true regional rate, as some counts are suppressed. The data displayed is a regional average.

Figure 107. 2018-2022 Region 8 Average Graduation Rates

In Region 8, the total students graduation rate varied from 100% in Edwards County to 74.9% in Karnes County for 2022. See Figure 108.

Figure 108. 2022 Graduation Rate by County

For economically disadvantaged students in Region 8, the graduation rates varied from 100% in Edwards County to 70.5% in Karnes County for 2022. See Figure 109.

Figure 109. 2022 Economically Disadvantaged Graduation Rate by County

Spirituality

Spirituality/religiosity can play a large role in substance use prevention and recovery. There is an overwhelming amount of research that concludes that these factors are indisputably protective factors for substance use⁴².

For the purposes of this assessment, the United States Religion Census will be utilized to show congregations and adherents for the region. The Religion Census accounts for those who are affiliated with recognized religions, however this does not account for individuals who identify themselves as simply “spiritual.”

In 2020, Region 8 had a rate of 85.4 congregations per 100,000 people, which is lower than the Texas rate of 102.1. Additionally, within Region 8, Edwards County had a rate of 773.6 congregations per 100,000 people, while Bexar County had a rate of 64.9 congregations per 100,000.

⁴² Grim, B. J., & Grim, M. E. (2019).

Figure 110. 2020 Congregation Rates by County, Region, and State

In 2020, 54 percent of the Region 8 population were adherents (those affiliated with a congregation), which is lower than the Texas percentage at 55 percent. Additionally, within Region 8, Frio County had 20 percent of the population as adherents, while Edwards County had 104 percent of the population as adherents⁴³. See Appendix, Table 39. Region 8 Spirituality 2020.

Figure 111. 2020 Percent Adherence by County, Region, and State

⁴³ There are three possible explanations for total adherents being above 100%: 1) a U.S. Census undercount, 2) a U.S. Religion Census overcount, 3) people living in a different county than where the church they affiliate with is located.

School Connectedness

Evidence shows that school connectedness is an important factor in the success of substance use prevention and recovery. The TSS provides two indicators of school connectedness for grades 7-12; student involvement and who students would go to for help with a SUD.

From 2018 to 2022, as shown below in Figure 112, Region 8 saw a decrease in almost every reported student activity, besides one, school choir. Additionally, in Region 8, students are most involved in School Athletics, with 50.3% of students being involved in Athletics in 2022.

Figure 112. 2018-2022 Region 8 Student Involvement

From 2018 to 2022, we also see a decrease in the percentage of who students would go to for help with an SUD. In 2022, there was a 9% increase in the number of students reporting that they would not seek help for a SUD, as seen below in figure 113. Although there was a decrease, students still reported they were most likely to seek help from their parents, friends, or another adult.

Figure 113. Who Students Would Ask for Help with SUD

Consumption Patterns

Youth Substance Use

Alcohol

Lifetime Use

- In the 2022 TSS, Region 8 lifetime use for any alcohol products for all students surveyed in 7th-12th grades was 46.6 percent. For all grades, between 2018 to 2022, there was a 20.8% decrease in lifetime alcohol use. 12th grade saw the most significant decrease in lifetime use at 38.8%.

Figure 114. 2018-2022 Region 8 Lifetime Use by Grade Level: Alcohol

Past School Year Use

- In the 2022 TSS, 29.2 percent of Region 8 students in 7th-12th grade reported drinking in the past school year. From 2018 to 2022, for all grades, past school year use of alcohol decreased by 30.3%. 12th grade use decreased from 65.7% in 2018 to 37.8% in 2022, an overall decrease of 42.5%.

Figure 115. 2018-2022 Region 8 Past School Year Use by Grade Level: Alcohol

Current Use

- In the 2022 TSS, Region 8 past month use for any alcohol product for all students surveyed in 7th-12th grades was 24.7 percent. Similar to both lifetime use and past school year use, all grades are seeing a decrease in use from 2018 to 2022. Current use for all grade levels dropped 31.4%. Again, 12th grade saw the largest decrease in use at 47.6%.

Figure 116. 2018-2022 Region 8 Current Use by Grade Level: Alcohol

Binge drinking (last 30 days)

- Binge drinking and heavy alcohol use can increase an individual's risk of alcohol use disorder. The Texas School Survey defines binge drinking as having five or more drinks in a two-hour period. Binge drinking has decreased from 2018 (17.2%) to 2022 (8.30%) in Region 8 among 7th-12th grade students. Of the students who report binge drinking, the most common response was that they binge drank one day out of the past thirty days.

Figure 117. 2022 Region 8 Binge Drinking by Grade Level

Tobacco

Lifetime Use

- In the 2022 TSS, Region 8 lifetime use for any tobacco product for all students surveyed in 7th-12th grades was 25.7%. From 2018 to 2022, lifetime consumption of tobacco for 12th graders decreased by 45.3%. In 2022, the overall lifetime consumption of tobacco use decreased by 26.1%.

Figure 118. 2018-2022 Region 8 Lifetime Use by Grade Level: Tobacco

Past School Year Use

- In the 2022 TSS, 15.6 percent of Region 8 students in 7th-12th grade reported tobacco use in the past school year. 12th grade shows a significant decrease of 53.2% in 2022. For past school year use, overall, there was a 35.5% decrease.

Figure 119. 2018-2022 Region 8 Past School Year Use by Grade Level: Tobacco

Current use (last 30 days)

- In the 2022 TSS, Region 8 past month use for any tobacco product for all students surveyed in 7th- 12th grades were 12.6 percent. From 2018 to 2022, 12th grade showed the largest difference with a 58.1% decrease in current use, and all grades decreased by 38.2%.

Figure 120. 2018-2022 Region 8 Current Use by Grade Level: Tobacco

E-Cigarettes/Vaping Products

Lifetime Use

- In the 2022 TSS, Region 8 lifetime e-cigarette/vaping product use for all students surveyed in 7th-12th grade was 23.4 percent. Overall use went from 28.9% in 2018 to 23.4% in 2022, a total decrease of 19%.

Figure 121. 2018-2022 Region 8 Lifetime Use by Grade Level: E-Cigarettes

Past School Year Use

- In the 2022 TSS, 12.2 percent of Region 8 students in 7th-12th grade reported e-cigarette/vaping product use in the past school year. Past school use provides an overall significant decrease from 2018 to 2022, with an 35.8% decrease. More notably, 12th grade decreased by 53% from 2018 to 2022.

Figure 122. 2018-2022 Region 8 Past School Year Use by Grade Level: E-Cigarettes

Current Use (last 30 days)

- In the 2022 TSS, Region 8 past month use for e-cigarette/vaping products for all students surveyed in 7th- 12th grades was 9.4 percent. Again 12th grade use decreased significantly from 2018 to 2022 by 58.2%. Overall, current use decreased by 36.1%.

Figure 123. 2018-2022 Region 8 Current Use by Grade Level: E-Cigarettes

Marijuana

Lifetime Use

- In the 2022 TSS, Region 8 lifetime marijuana use for all students surveyed in 7th- 12th grade was 20.5 percent. 12th grade use decreased in 2022 by 35.2%. From 2018 to 2022, overall lifetime use saw a 13.9% decrease.

Figure 124. 2018-2022 Region 8 Lifetime Use by Grade Level: Marijuana

Past School Year Use

- In the 2022 TSS, 15.5 percent of Region 8 students in 7th-12th grade reported marijuana use in the past school year. 12th grade had a significant decrease of 36.3% from 2018 (36.4%) to 2022 (23.2%). In 2022 there is a 15.8% decrease in overall past school year use.

Figure 125. 2018-2022 Region 8 Past School Year Use by Grade Level: Marijuana

Current Use (last 30 days)

- In the 2022 TSS, Region 8 past month use for marijuana for all students surveyed in 7th- 12th grades was 13.7 percent. From 2018 to 2022, this is an overall decrease of 12.2%. More notably, 12th grade use decreased by 32.8%.

Figure 126. 2018-2022 Region 8 Current Use by Grade Level: Marijuana

Prescription Drugs

Lifetime Use

- In the 2022 TSS, Region 8 lifetime use for any prescription drug not prescribed by a doctor for all students surveyed in 7th- 12th grade was 15.7 percent. From 2018 to 2022, overall lifetime use decreased by 13.3%, but 12th grade alone saw a 38.1% decrease.

Figure 127. 2018-2022 Region 8 Lifetime Use by Grade Level: RX Drugs

Past School Year Use

- In the 2022 TSS, 8.6 percent of Region 8 students in 7th-12th grade reported prescription drug use in the past school year. In 2022, all grades see a decrease in past school year use, with the overall decrease being 23.2%. From 2018 to 2022, 9th grade, and 12th grade had the most significant decreases in use, 9th grade saw a decrease of 35.9% and 12th grade had a decrease of 35.3%.

Figure 128. 2018-2022 Region 8 Past School Year Use by Grade Level: RX Drugs

Current Use (last 30 days)

- In the 2022 TSS, Region 8 past month use for prescription drugs for all students surveyed in 7th-12th grades was 25.7 percent. From 2018 to 2022, there was an overall decrease of 26.2% for current/past month use. Between the years, 12th grade saw the largest decrease at 45.3%.

Figure 129. 2018-2022 Region 8 Current Use by Grade Level: RX Drugs

Illicit Drugs

Lifetime Use

- In the 2022 TSS, Region 8 lifetime illicit drug use for all students surveyed in 7th- 12th grade was 22.8 percent. 12th grade had a decrease from 2018 (48.2%) to 2022 (32.9%) of 31.7%. The overall lifetime use decreased by 10.2%.

Figure 130. 2018-2022 Region 8 Lifetime Use by Grade Level: Illicit Drugs

Past School Year Use

- In the 2022 TSS, 18 percent of Region 8 students in 7th-12th grade reported illicit drug use in the past school year. In 2022, 12th grade had a significant decrease in past school year use at 32.7%. The overall decrease in past school year use was 10.9%.

Figure 131. 2018-2022 Region 8 Past School Year Use by Grade Level: Illicit Drugs

Current Use (last 30 days)

- In the 2022 TSS, Region 8 past month use for illicit drugs for all students surveyed in 7th- 12th grades was 14.8 percent. Overall use decreased by 6.9% and 12th grade decreased the most by 30.2%.

Figure 132. 2018-2022 Region 8 Current Use by Grade Level: Illicit Drugs

College Student Consumption

Alcohol

Current Use (last 30 days)

- According to the Texas College Survey (TCS), in 2021, 50.8 percent of Texas college students used alcohol in the past month. Out of the participating students, 49.6 percent of males reported current alcohol, while 51.9 percent of females reported so. From 2019 to 2021, there has been a 7.3 percent decrease in students who have drunk alcohol in the past month.

Figure 133. 2019-2021 TCS Current Use by Gender: Alcohol

Past Year Use

- In the 2021 TCS, 65.1 percent of college students in Texas reported alcohol use in the past year. Out of the participating students, 62.5 percent of males reported past year alcohol use, while 67.3 percent of females reported so. From 2019 to 2021 there has been a 7.8 percent decrease in students who reported alcohol use in the past year.

Figure 134. 2019-2021 TCS Past Year Use by Gender: Alcohol

Lifetime Use

- According to the TCS, in 2021, 73.2 percent of Texas college students have ever used alcohol. Out of the participating students, 71.7 percent of males reported lifetime alcohol use, while 74.5 percent of females reported so. From 2019 to 2021, there has been a 4.7 percent decrease in students who have ever used alcohol.

Figure 135. 2019-2021 TCS Lifetime Use by Gender: Alcohol

Tobacco

Current Use (last 30 days)

- According to the Texas College Survey (TCS), in 2021, 17.4 percent of Texas college students used tobacco in the past month. Out of the participating students, 20.9 percent of males reported current tobacco use, while 14.5 percent of females reported so. From 2019 to 2021, there has been a 21.6 percent decrease in students who have used tobacco in the past month.

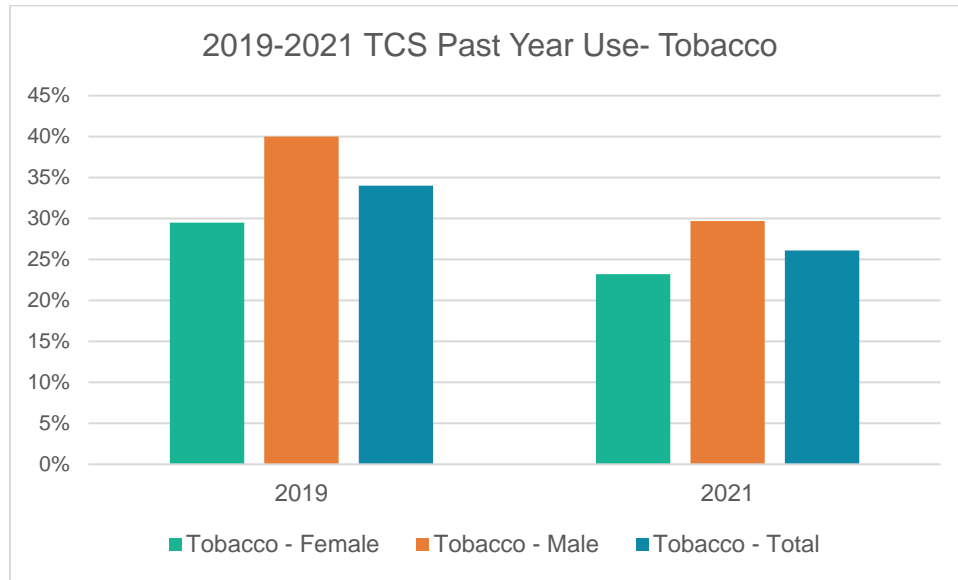

Figure 136. 2019-2021 TCS Current Use by Gender: Tobacco

Past Year Use

- In the 2021 TCS, 26.1 percent of college students in Texas reported tobacco use in the past year. According to the TCS, out of the participating students, 29.7 percent of males reported past year tobacco use, while 23.2 percent of females reported so. From 2019 to 2021 there has been a 23.2 percent decrease in students who reported tobacco use in the past year.

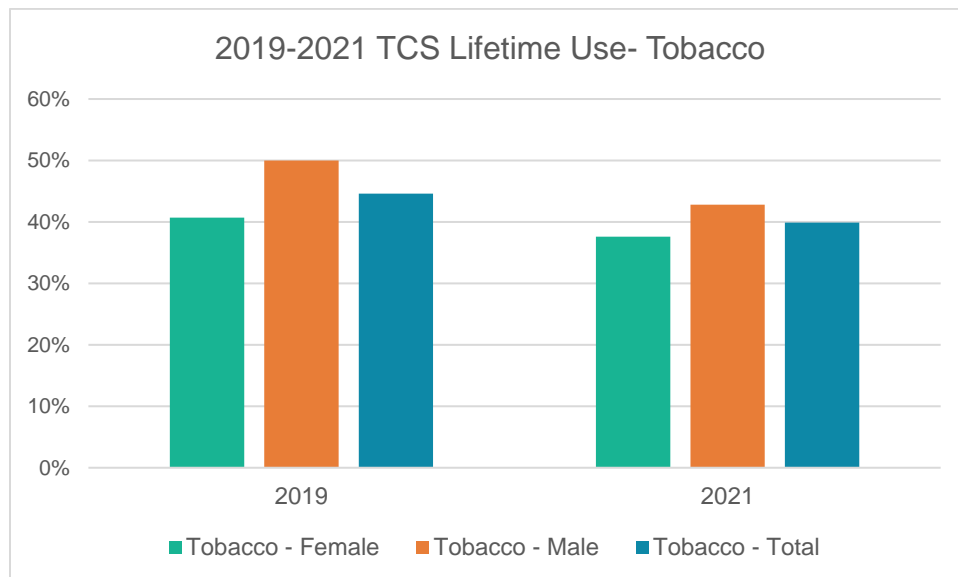

Figure 137. 2019-2021 TCS Past Year Use by Gender: Tobacco

Lifetime Use

- According to the TCS, in 2021, 39.9 percent of Texas college students have ever used tobacco. Out of the participating students, 42.8 percent of males reported lifetime tobacco use, while 37.6 percent of females reported so. From 2019 to 2021, there has been a 10.5 percent decrease in students who have ever used tobacco.

Figure 138. 2019-2021 TCS Lifetime Use by Gender: Tobacco

Marijuana

Current Use (last 30 days)

- According to the Texas College Survey (TCS), in 2021, 15.4 percent of Texas college students used marijuana in the past month. Out of the participating students, 15 percent of males reported current marijuana use, while 15.3 percent of females reported so. From 2019 to 2021, there has been a 3.1 percent decrease in students who have used marijuana in the past month.

Figure 139. 2019-2021 TCS Current Use by Gender: Marijuana

Past Year Use

- In the 2021 TCS, 26.1 percent of college students in Texas reported marijuana use in the past year. According to the TCS, out of the participating students, 25.1 percent of males reported past year marijuana use, while 26.8 percent of females reported so. From 2019 to 2021 there has been a 7.8 percent decrease in students who reported marijuana use in the past year.

Figure 140. 2019-2021 TCS Past Year Use by Gender: Marijuana

Lifetime Use

- According to the TCS, in 2021, 40.1 percent of Texas college students have ever used marijuana. Out of the participating students, 39.1 percent of males reported lifetime marijuana use, while 40.5 percent of females reported so. From 2019 to 2021, there has been a 2.9 percent decrease in students who have ever used marijuana.

Figure 141. 2019-2021 TCS Lifetime Use by Gender: Marijuana

Prescription Drugs

Current Use (last 30 days)

- According to the Texas College Survey (TCS), in 2021, 3.3 percent of Texas college students used prescription drugs not for medical use in the past month. Out of the participating students, 3.2 percent of males reported current prescription drug use, while 3.3 percent of females reported so. From 2019 to 2021, there has been a 38.9 percent decrease in students who have used prescription drugs in the past month.

Figure 142. 2019-2021 TCS Current Use by Gender: RX Drugs

Past Year Use

- In the 2021 TCS, 7.8 percent of college students in Texas reported prescription drug use in the past year. Out of the participating students, 7.8 percent of males reported past year prescription drug use, while 7.4 percent of females reported so. From 2019 to 2021 there has been a 39.5 percent decrease in students who reported prescription drug use in the past year.

Figure 143. 2019-2021 TCS Past Year Use by Gender: RX Drugs

Lifetime Use

- According to the TCS, in 2021, 19.8 percent of Texas college students have ever used prescription drugs. Out of the participating students, 21.8 percent of males reported lifetime prescription drug use, while 17.7 percent of females reported so. From 2019 to 2021, there has been a 23.6 percent decrease in students who have ever used prescription drugs.

Figure 144. 2019-2021 TCS Lifetime Use by Gender: RX Drugs

Illicit Drugs

Current Use (last 30 days)

- According to the Texas College Survey (TCS), in 2021, 3 percent of Texas college students used illicit drugs in the past month. Out of the participating students, 3.3 percent of males reported current illicit drug use, while 2.6 percent of females reported so. From 2019 to 2021, there has been a 16.7 percent decrease in students who have used illicit drugs in the past month.

Figure 145. 2019-2021 TCS Current Use by Gender: Illicit Drugs

Past Year Use

- In the 2021 TCS, 10.2 percent of college students in Texas reported illicit drug use in the past year. According to the TCS, out of the participating students, 12 percent of males reported past year illicit drug use, while 8.6 percent of females reported so. From 2019 to 2021 there has been an 8.9 percent decrease in students who reported illicit drug use in the past year.

Figure 146. 2019-2021 TCS Past Year Use by Gender: Illicit Drugs

Lifetime Use

- According to the TCS, in 2021, 22.5 percent of Texas college students have ever used illicit drugs. Out of the participating students, 27.9 percent of males reported lifetime illicit drug use, while 17.8 percent of females reported so. From 2019 to 2021, there has been a 2.6 percent decrease in students who have ever used illicit drugs.

Figure 147. 2019-2021 TCS Lifetime Use by Gender: Illicit Drugs

Adult Substance Use

Current Use – Alcohol

The Behavioral Risk Factor Surveillance System (BRFSS) utilizes telephone surveys to collect state-level data regarding risk behaviors, chronic health conditions, and use of preventative services. In the BRFSS, current use is described as those who have had at least one drink of alcohol within the past 30 days. In 2022, 51.7 percent of adults reported past month alcohol use, 57.5 percent of males reported past month alcohol use and 45.9 percent of females reported so. Individuals aged 25-34 reported the highest percentage of current alcohol use at 63.7 percent. From 2018 (51.7%) to 2022 (51.7%), adults reporting current alcohol use in these five years has largely remained the same.

Figure 148. 2018-2022 Adult Alcohol Consumption

Adult Binge Drinking

According to the BRFSS, the indicator “binge drinking” is characterized as males having five or more drinks on one occasion and females having four or more drinks on one occasion. In 2022, in Texas, 16.5 percent of adults reported binge drinking, 21.7 percent of males reported binge drinking and 11.4 percent of females reported so. Individuals aged 25-34 reported the highest percentage of binge drinking at 28.8 percent. From 2018 (17.5%) to 2022 (16.5%), there was a decrease in those reporting binge drinking.

Figure 149. 2018-2022 Adult Binge Drinking

Adult Smoking

The BRFSS asks participants whether they are current smokers. In 2022, 11.9 percent of Texas adults reported smoking. From 2018 (14.4%) to 2022 (11.8%), there was a 18 percent decrease in those reporting being current smokers.

Figure 150. 2018-2022 Texas Adult Smoking

Public Health and Safety

Consequences of Substance Use/Misuse

Mortality

Opioid Related Emergency Department Visits

- Outpatient opioid related emergency department (ED) visits rate for Texas in 2022 was 100.3 visits per 100,000 population, this is an increase from 2021 with visits in Texas being 98.6 per 100,000 persons. Region 8 opioid related ED visits were higher than Texas from 2018-2022, with the 2022 rate being 113 per 100,000, as seen in Figure 151.

Outpatient ED visits in Region 8 counties in 2022 ranged from 32 per 100,00 in Kinney to 372.3 per 100,000 in Zavala. This is shown in Figure 152. See Appendix, Table 40. Opioid Related Emergency Department Visits.

Figure 151. Outpatient Opioid Visits by Region and State

Figure 152. 2022 Outpatient Opioid Visits by County

- Inpatient opioid related emergency department (ED) visits rate for Texas in 2022 was 97.7 visits per 100,000 population. Region 8 opioid related ED visits were higher than Texas from 2018-2022, with the 2022 rate being 124.7 visits per 100,000, as seen in Figure 153.

Inpatient ED visits in Region 8 counties in 2022 ranged from 14.7 per 100,00 in Val Verde to 153.2 per 100,000 in Bexar. This is shown in Figure 154. See Appendix, Table 40. Opioid Related Emergency Department Visits.

Figure 153. Inpatient Opioid Visits by Region and State

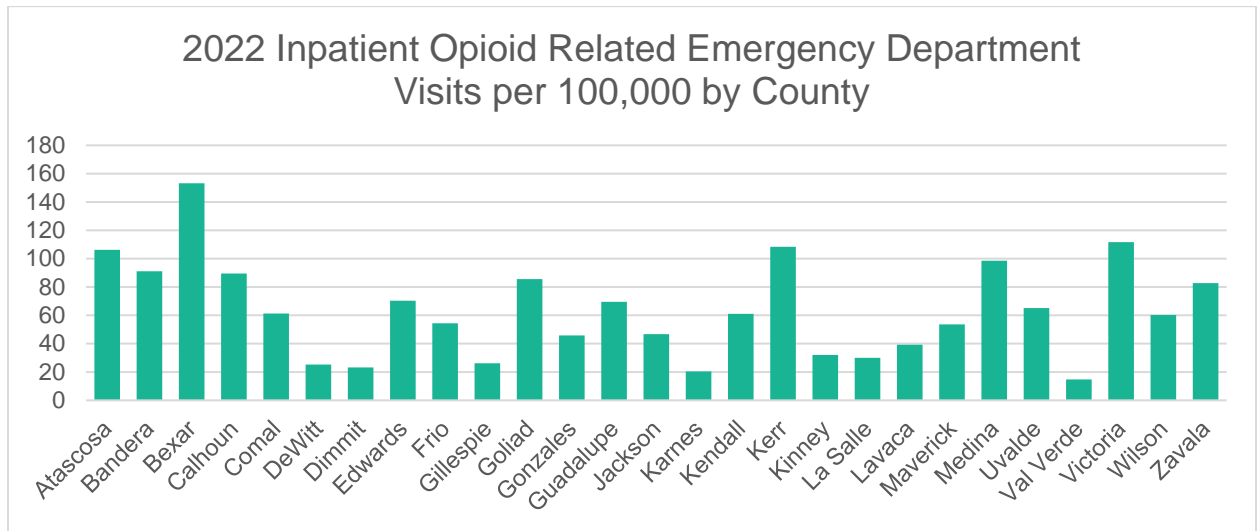

Figure 154. 2022 Inpatient Opioid Visits by County

Overdose Deaths

- The overdose death rate for Texas in 2023 was 18.7 deaths per 100,000 population, a rate increase of 74.8 percent from 10.1 deaths per 100,000 persons in 2018 to 18.7 in 2023. In 2023 the number of overdose deaths in Texas was 5,439, while the number of overdose deaths in Region 8 was 567.

Figure 155. 2018-2023 Texas Overdose Death Rate

The overdose death rate for Region 8 in 2023 was 18.7 deaths per 100,000 population, a decrease from 19.1 deaths per 100,000 persons in 2022. See Appendix, Table 41. Region 8 Overdose Deaths 2018-2023.

Figure 156. 2018-2023 Region 8 Overdose Death Rate

In 2023, the adolescent (individuals aged 15-24) overdose death rate for Region 8 was 8.7 per 100,000 persons. The rate of adolescent overdoses decreased slightly from 2022, to 8.9 per 100,000 persons.

Figure 157. 2018-2023 Region 8 Adolescent Overdose Death Rate

Deaths by Suicide

- Adolescent Suicides: In Region 8, from 2018 to 2023, there were 229 deaths by suicide for children aged 10-19 years. In Texas, the total number of suicides from 2018 to 2023 was 1,809 for this age group. Region 8 had the third largest number of youth suicides of the eleven regions in Texas.

Table 6. 2018-2023 Region 8 Adolescent Suicides (10-19)

Public Health Region	Years					
	2018 Rate per 100k	2019 Rate per 100k	2020 Rate per 100k	2021 Rate per 100k	2022^ Rate per 100k	2023^ Rate per 100k

Note: ^Death data for 2022 and 2023 are non-final
 *Indicates suppressed data

- Adult Suicides: In 2022, the adult suicide rate for adults 25 and older was 16.9 per 100,000 persons. From 2018 to 2022, there has been a 3.9 percent increase in the adult suicide rate per 100,000 persons.

Figure 159. 2018-2023 Region 8 Suicide Rate

In 2023, individuals aged 35-44 had the highest rate of suicides among adults in Region 8 at 25.6 per 100,000 persons. In the same year, individuals aged 65-74 had the lowest rate of suicides among adults in Region 8 at 11.3 per 100,000 persons. See Appendix, Table 43. Region 8 Suicide Deaths 2018-2023.

Figure 16o. 2023 Region 8 Adult Suicide Rate by Age

Alcohol-Related Vehicular Fatalities

- Across Texas in 2023, there were 1497 people killed in motor vehicle traffic crashes where someone involved was under the influence of alcohol (i.e., driver, pedestrian, cyclist, etc.). The number of persons killed increased 9.1% from 1372 in 2018 to 1497 in 2023. In 2023, Region 8 had 119 people killed in motor vehicle traffic crashes where a someone involved was under the influence of alcohol. The number of persons killed decreased 7.0% from 128 deaths in 2018. In 2023, the Region 8 rate of alcohol-related vehicular fatalities was 3.9 per 100,000 persons.

Figure 161. 2018-2023 Alcohol-Related Vehicular Fatalities by Region and State

In 2023, Region 8 county rates of alcohol-related vehicular fatalities ranged from 0.0 in Calhoun, Goliad, Jackson, Kinney, Real, and Zavala Counties to 70.3 per 100,000 in Edwards County. See Appendix, Table 44. Region 8 Alcohol-Related Vehicular Fatalities 2018-2023.

Figure 162. 2023 Region 8 Alcohol-Related Vehicular Fatalities by County

Healthcare

Adults and Adolescents Receiving Substance Use Disorder (SUD) Treatment

- The data exhibited for this indicator only accounts for treatment services funded by the Health and Human Services Commission (HHSC) and does not necessarily represent all SUD treatment service providers in Texas. In 2022, Region 8 (233.1 per 100,000 persons) had a lower rate of individuals receiving SUD treatment than the Texas (341 per 100,000) rate. The total rate of individuals receiving SUD treatment has decreased by 56.4 percent from 2018 to 2022 in Region 8.

Figure 163. 2018-2022 State Funded SUD Treatment by Region and State

In 2022, the youth SUD treatment rate (115 per 100,000 persons) was much lower than that of adults in Texas (416.2 per 100,000 persons). See Appendix, Table 45. Substance Use Disorder Treatment Numbers 2018-2022.

Figure 164. 2018-2022 State Funded SUD Treatment by Age Category: Texas

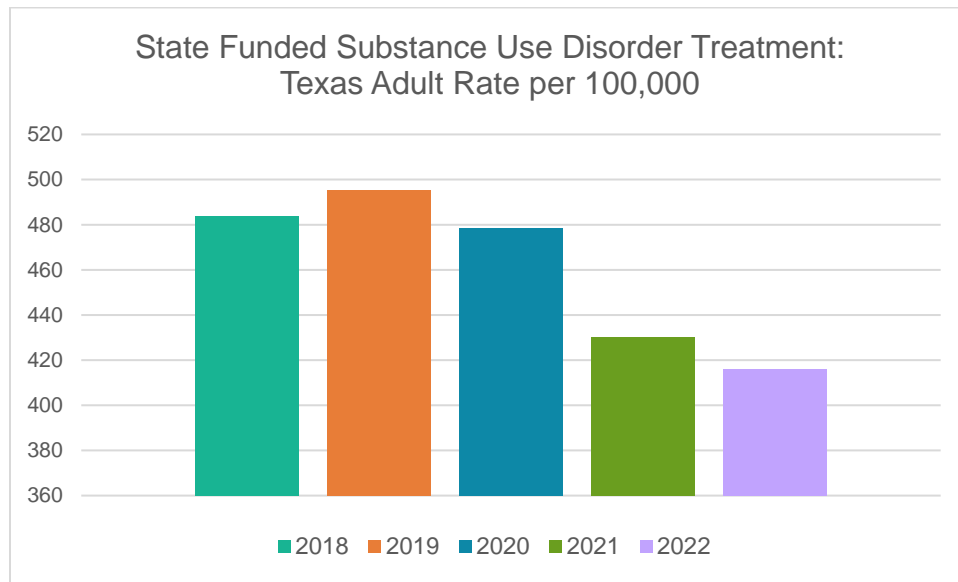

In Texas, the 2022 youth SUD treatment rate was 115 per 100,000 persons. There has been a 40.4 percent decrease in the youth SUD treatment rate from 2018 to 2022.

Figure 165. 2018-2022 State Funded SUD Treatment: Texas Youth Rate

In Texas, the 2022 adult SUD treatment rate was 416.2 per 100,000 persons. There has been a 13.9 decrease in the adult SUD treatment rate from 2018 to 2022.

Figure 166. 2018-2022 State Funded SUD Treatment: Texas Adult Rate

Criminal Justice

Drug-Related Incarceration

In Texas, there is a decrease in drug-related incarcerations overall. Evidence has shown that the risk of overdose increases for inmates with a SUD following release.⁴⁴ In 2023, there were 19,144 drug-related incarcerations in the state of Texas. This is a 20.1% decrease in drug related incarcerations from 2018 to 2023 (23,963 drug-related incarcerations in 2018). See Appendix, Table 46. Drug-Related Incarceration Rates 2018-2023. Please note that these rates reflect people actively incarcerated, this is not necessarily reflecting people recently incarcerated that year.

⁴⁴(National Institute on Drug Abuse, 2020)

Figure 167. Texas Drug-Related Incarceration by Year

Economic

Estimated Economic Impact of Drinking/Drug Use/Misuse

- The National Institute on Drug Abuse reports that misuse of tobacco, alcohol, and illicit drugs is costly to our nation, exacting more than \$1 trillion annually in costs related to crime, lost work productivity, and health care. All figures in this section have been adjusted for inflation.

Table 7. Estimated Economic Impact of Substance Use

Cost of Substance Use Nationally			
Substance	Health Care	Overall	Year Estimate Based On
Tobacco	\$241 billion	\$431 billion	2010
Alcohol	\$38 billion	\$358 billion	2010
Illicit Drugs	\$16 billion	\$291 billion	2007
Prescription Opioids	\$35 billion	\$105 billion	2013

In 2013, underage drinking cost the citizens of the United States \$56.9 billion. These costs include medical care, work loss, and pain and suffering associated with the multiple problems resulting from the use of alcohol by youth. ¹ This translates to \$1,903 per year for each youth in the United States or \$3.75 per drink consumed underage. Excluding pain and suffering from these costs, tangible costs of underage drinking including medical care, criminal justice, property damage, and loss of work in the United States totaled \$20.01 billion each year or \$1.32 per drink. In contrast, a drink in the United States retails for \$0.93⁴⁵.

⁴⁵Pacific Institute for Research and Evaluation. (2015).

Emerging Trends

Impact of COVID-19 on Behavioral Health

As of mid-2023, COVID-19 cases in Texas have largely decreased from 2020 and 2021. Protective measures such as increased handwashing, social distancing, and vaccine development helped decrease the exponential spread of the virus. Along with social distancing and restricting daily activities comes isolation, and with isolation comes negative physical and mental health effects.

Young children were required to do their studies online, without social access to their classmates. School routines have been considered important coping mechanisms for young people with mental health issues. When schools are closed, they lose an anchor in life and their symptoms can relapse. The effect of this change on children and adolescents' mental health has increased with the prolongation of social isolation, consequently triggering or exacerbating episodes of anxiety, panic, and depression⁴⁶. In addition to mental health issues, students' educational learning was stunted. Without the structure of school schedules and with the distractions of being home, students were underperforming academically⁴⁷.

Researchers have observed increases in substance use and drug overdoses in the United States since the COVID-19 pandemic was declared a national emergency in March 2020. The COVID-19 pandemic also presents unique challenges for people with substance use disorders and those in recovery. Since 2016, drug overdose deaths have been driven largely by fentanyl and similar synthetic opioids. Experts note that factors related to the pandemic—such as social isolation and stress, people using drugs alone, an overall increase in rates of drug use, and decreased access to substance use treatment, harm reduction services, and emergency services—likely exacerbated these trends, though more research is needed to better understand this relationship. Studies in the United States and other countries also suggest many people increased their use of alcohol and cannabis (marijuana), especially people with clinical anxiety and depression and those experiencing COVID-19-related stress.

People in treatment for substance use disorders face unique challenges during the pandemic. Physical distancing, quarantine, and other public health measures have disrupted access to medication and other support services for many people. For those in recovery from a substance use disorder, social support is crucial, and social isolation is a risk factor for continued substance use (relapse). Physical distancing measures and quarantine may be especially difficult for people in recovery because they limit access to meetings of peer-support groups and other sources of social connection. Although in-person recovery supports may be limited during the pandemic, virtual meetings and telehealth counseling have expanded and may be useful for some⁴⁸.

Community Interview Findings

The Region 8 Prevention Resource Center, under the San Antonio Council on Alcohol and Drug Awareness conducted several key informant interviews over the course of the 2022 and 2023 fiscal years. Individuals from the following sectors were interviewed: youth, parents, business community, media, schools, youth-serving organizations, law enforcement agencies, religious or fraternal organizations, civic and volunteer groups, recovery community, healthcare professionals, governmental agencies, and other organizations involved in reducing substance misuse. The questions asked of these individuals may be found on Page 20 of this report. This section will provide a summary of the responses from the previously mentioned sectors regarding substance use and mental health concerns these individuals see within their respective communities.

The key informants offered several substance use concerns that they are seeing in the community. Several reported vaping amongst youth and marijuana use in schools, others mentioned underage drinking as youth issues. The interviewee from the youth sector identified that stimulant misuse is common among college students, specifically during exam periods as a means to focus and stay alert longer to study. As a whole, the interviewees identified the following substance use concerns: marijuana, alcohol, vaping, meth, stimulants, fentanyl, cocaine, and crack.

During the interviews for each sector, all of the individuals identified that there are concerns of youth substance use due to a number of social determinants of health. Some of the determinants mentioned in the interviews were related to low socioeconomic status, cultures where substance use is normalized, violence within the community and lack of access to care, just to name a few. The interviewees recognized a number of risk factors associated with youth substance health due to these determinants. One of the main risk factors that were discussed was stress, either related to family or individual stressors. Some interviewees also indicated that stress from the COVID-19 pandemic perpetuates substance use disorders and mental health disorders in youth. The concern that the pandemic stunted socialization of youth was also prominent in the interviews, which relates to an increase in mental health issues perceived in youth.

Several of the interviewees identified stress and trauma-related incidents as a cause for “self-medication” as a coping mechanism. Some of the interviewees identified that children in the foster care system are at increased risk for substance use disorders, and that there is not adequate support for foster children after they are out of the system. The interviewee representing the healthcare sector identified that adverse childhood experiences (ACEs) are a major contributing factor for substance use and mental health disorders. Additionally, some interviewees identified that the homeless population is at risk due to the cycle of poverty and stressors related to that experience, and the lack of affordable housing contributes to this issue.

Other contributing factors the interviewees identified in youth were peer pressure to engage in risky behaviors, social media glorifying drugs and alcohol, mental health struggles perpetuating substance use, gun violence inducing secondary stress related to safety, and domestic violence within the home (a contributing factor as well as a consequence). The key informant interviewees also recognized ease of access to be a contributing factor for youth substance use. The interviewee representing the law enforcement sector stated that retailers failing to ID minors purchasing alcohol are partially responsible for increasing ease of access to youth.

The main consequence of substance use the interviewees see in the community is death by overdose. The interviewees identified that substance misuse has the potential for an individual to hurt themselves or others. Other consequences mentioned were long- and short-term physical/mental health effects, crime, intergenerational trauma, and cost to the community. The interviewee from the business sector mentioned that heroin use in the 1970's and 1980's caused an uptick in Hepatitis C, and now, years later, these same individuals are experiencing cirrhosis of the liver, and even cancer.

One of the main barriers to seeking care or promoting prevention identified by the interviewees was access to care and services. The interviewees communicated concerns regarding lack of transportation to services, lack of childcare, lack of affordability of services, uninsured persons, inaccessibility to services based on location, unavailability of services specific to needs, facilities lacking capacity, and language barriers. Another notable barrier identified by several interviewees was stigma surrounding substance use and mental health disorders. Several stated that culture within the minority and military communities often view discussions surrounding substance use and mental health as "taboo" in nature. One interviewee also mentioned noticing a stigma surrounding individuals who are prescribed medications that treat mental health disorders.

The interviewees were asked in the latter half of their interviews about resources their communities lack and needs that they have identified. The most common responses were education and training about substance use prevention and mental health wellness. Additionally, many interviewees expressed a need for more awareness surrounding substance use and mental health disorders; the individual from the school sector outlined that many students do not believe that vaping is harmful. The youth sector representative expressed a need for more student-led organizations that promote healthy conversations about mental health and substance use. The interviewee from the law enforcement sector identified a need for better harm reduction. Additionally, counseling or therapy may be more beneficial for youth than sending them to jail, as this perpetuates a fear of police. The interviewee also stated that police officers with emergency detentions have been turned away, as hospitals are at capacity, thus identifying a secondary need for funding to establish more facilities. The representative of the business sector mentioned peer to peer court mandated classes, so in the place of a victim impact panel, an offender impact panel may be more palatable for those taking the class. Lastly, some interviewees called for improved hotline services for substance use and mental health crises and pointed to the relatively new 9-8-8 suicide and crisis hotline as a good resource.

Region in Focus

Prevention Resources and Capacities

Substance Use/Misuse and Behavioral Health Community Coalitions

- **Circles of San Antonio, Guadalupe County, Comal County, Kendall County Coalitions:** works under the San Antonio Council on Alcohol and Drug Awareness to prevent and reduce youth substance use, implement multi-media awareness campaigns, providing comprehensive social action strategies, change the norms of social access to substances, and provide awareness of the risks of ATODs.
- **Bethel Prevention Coalition:** works to prevent and reduce youth substance use by expanding and enhancing the membership of the coalition, enhancing the leadership skills of the Steering Committee and Action Committees; strengthening collaboration with other DFC Coalitions in San Antonio and the State of Texas; conducting community outreach to increase visibility of the Coalition and awareness of the problem.
- **South Texas Opioid Prevention (STOP):** STOP expands and enhances overdose prevention and harm reduction services for minority individuals who have, or are at risk of developing, substance use disorders. They provide the following services at no cost: supply harm reduction supplies, provide substance use education and awareness, refer individuals to treatment, screening and navigation, and peer recovery support.

Other Coalitions

- **The San Antonio Crime Coalition:** provides valuable information and intelligence to its registered participants within San Antonio. It acts as a go between the civilian population and law enforcement agencies in addressing the fear of retaliation from the criminal element.
- **The San Antonio Grandparents Raising Grandchildren Coalition:** provides mentorship and access to information and resources for grandparents raising their grandchildren. They provide opportunities geared at improving the health and quality of life for grandparents raising grandchildren and other family caregivers by connecting them to resources in San Antonio.
- **Bexar Area Harm Reduction Coalition (BAHRC):** began as an extension of the Texas Department of State Health Services HIV and STD Planning Program. Currently, the BAHRC is an independent entity funded entirely by private grants and staffed by volunteers. The materials they offer are to reduce the transmission of blood borne diseases, HIV, HCV, and syphilis. They provide harm reduction and syringe service exchange to the clients they serve.

Community Programs and Services

- **Corazon Ministries:** serves people experiencing homelessness, opened a Day Center Resource Hub that includes harm reduction services and syringe service program. Currently, this is the only legal syringe service program in the state of Texas.
- **San Antonio Food Bank:** provides benefit assistance for those applying for aid, farmers' markets, food assistance/distribution, job assistance, serve/educate those in food deserts, health education, programs for children, programs for seniors, and programs for pets.
- **SAMM Ministries:** an interfaith ministry whose mission is to help the homeless and those at risk of becoming homeless attain self-sufficiency by offering, with dignity and compassion, shelter, housing, and services.

- **South Alamo Regional Alliance for the Homeless (SARAH):** works with agencies across San Antonio to end homelessness. As the local Continuum of Care Lead Agency, SARAH is charged to create an improved service system that effectively provides support, coordination, and housing to all homeless populations in the area, with a primary focus on moving individuals and families out of homelessness efficiently and permanently.

Other State/Federally Funded Prevention

- **BEAT AIDS:** provides quality HIV/AIDS prevention, education and services reaching out to the community. The Prevention Team goes out into the community to find individuals that are interested in getting free and confidential HIV/STI/Hepatitis testing and free condoms. Outpatient mental health and substance misuse services are offered to individuals and families. The services are provided one-on-one and in group settings.
- **Big Mama's Safehouse:** seeks to improve and transform community safety by changing the mindset of potential gun violence victims. Through promoting healthy conflict resolution strategies, providing access to needed resources, and empowering the community to heal this organization aims to reduce gun violence through community efforts by confronting its root causes.
- **South Texas Rural Health:** links rural communities to care with 8 clinics, 4 dental clinics, 7 licensed substance misuse centers and 10 locations providing mental health services in rural areas of South Texas.
- **WestCare:** dedicated to serving disinvested people in communities across San Antonio. Their coalition, The Promise Zone Coalition, is working to prevent opioid and alcohol misuse amongst youth on the Eastside of San Antonio. Working closely with partners in the area, The Promise Zone Coalition aims to increase community collaboration, reduce youth substance use, and create sustainable policy change by providing educational resources and activities for youth.

SUD Treatment Providers

- **Rise Recovery:** Rise Inspire Academy is San Antonio's Only Recovery High School. They combine innovative learning methods with a strong peer culture in which all students identify as being active in their recovery and committed to supporting their fellow students as they face challenges associated with early recovery.
- **Haven for Hope:** addresses the root cause of homelessness by offering programming specific to the needs of the individual. Haven for Hope offers an Integrated Treatment Program (ITP) that those with substance misuse and/or mental health disorders may apply for.
- **Be Well Texas:** provides access to high-quality, low-barrier, evidence-based care throughout Texas. Be Well works with a statewide network of over 133 community-based organizations and hospital partners to improve quality and access to treatment and recovery support services.

Healthcare Providers

- **University Health:** the only locally owned and operated health system in San Antonio and Bexar County, University Health takes to heart its responsibility to serve the health needs of their community today and into the future. University Health partners with several community health programs to provide assistance to those in need.
- **Methodist Healthcare:** Methodist Healthcare offers a wide selection of doctors, healthcare professionals, equipment and health services from wellness events to transplant services,

pediatrics, dermatology, cardiology, oncology, and a complete range of other medical services in the South Texas region. Their network of greater San Antonio hospitals includes nine acute care facilities: Methodist Hospital, Methodist Children's Hospital, Methodist Hospital Metropolitan, Methodist Hospital Northeast, Methodist Hospital Atascosa, Methodist Hospital Specialty and Transplant, Methodist Hospital Stone Oak, Methodist Hospital Texan, and Methodist Hospital Hill Country.

Youth Prevention Programs

Students Talking to Parents about Alcohol, Tobacco, and Other Drugs: When parents talk with their children early and often about alcohol and other drugs, they can protect their children from many of the high-risk behaviors associated with using these drugs. If parents don't talk about the risks of underage drinking and substance use, their kids might not see any harm in trying alcohol and other substances. Having a conversation allows parents to set clear rules about what they expect from their kids when it comes to alcohol and other drugs⁴⁹.

In 2022, the TSS reported that in Texas, 67.6 percent of students in grades 7th -12th reported that they would seek help from their parents if they had a problem with alcohol or drugs, compared to Region 8 where 64.9 percent would seek help from their parents.

Students Receiving Education about Alcohol, Tobacco, and Other Drugs: In the 2022 TSS, students in Region 8 reported that they received education on drugs or alcohol from the following sources: a school health class (37.2%), an assembly program (40.4%), guidance counselor (31.3%), school nurse (17.9%), science/social studies class (28.4%), student group/club meeting at school (13.8%), an invited school guest (29.7%), another source at school (27.6), and any school source (64.2%).

Organizations that Provide Prevention Education to Students:

- **San Antonio Council on Alcohol and Drug Awareness (SACADA):** SACADA's youth prevention program offers a range of curricula from all three program types (Universal, Selective, and Indicated) for all grade levels. SACADA's YP curricula includes Youth Connection, Too Good for Drugs, and Project Toward No Drug Abuse.
- **Juvenile Outreach Vocational Education (J.O.V.E.N.):** focuses on developing character and resiliency in children by providing them with innovative and exciting programs, as well as structured alternative activities that are designated to help them to succeed. Prevention services are delivered through a curriculum called Positive Action, designed to increase protective factors, and through presentations on substance misuse.

Life Skills Learned in Youth Prevention Programs: Youth Prevention (YP) programs consist of using age-appropriate, evidence-based curriculum to educate youth on the negative health consequences of alcohol, tobacco, and other drugs. These curriculums incorporate life skills, which coupled with drug education, can build resiliency in youth. The prevention programs are broken down into three subcategories: Universal, Selected, and Indicated.

⁴⁹ Substance Abuse and Mental Health Services Administration. (2022).

- Universal (YPU)- reaches the general population, without regard to individual risk factors, and are generally designed to reach a very large audience or population, such as a community, school, or neighborhood.
- Selective (YPS)- activities promote a proactive process to address health and wellness for individuals, families, and communities by enhancing protective factors and by averting and precluding negative factors that place individuals at risk for substance misuse. Selective prevention activities target subgroups of the general population that are determined to be at risk.
- Indicated (YPI)- approaches are used for individuals who are experiencing early signs of substance use and other related problem behaviors associated with substance use. The individuals may or may not be misusing substances, but exhibit risk factors such as school failure, interpersonal social problems, delinquency, or other antisocial behaviors, or psychological problems such as depression or suicidal behaviors that increase the risk of developing a substance misuse disorder.

Between SACADA's YPU, YPS, and YPI programs, in 2023, over 6,500 unduplicated youth received education/skills training from an approved evidence-based curriculum. Additionally, these three programs at SACADA conducted several prevention/behavioral health promotion presentations to nearly 48,000 youth over the 2023 fiscal year.

As described, SACADA utilizes the Too Good for Drugs Curriculum in the Youth Prevention programs. From January 2023 to June 2023, there were 109 matched responses to the Too Good for Drugs between pre- and post-tests, with all the respondents reporting that they were in the 6th grade at the beginning of the pre-test survey. The following information is from school districts in rural areas of Region 8, specifically in the hill country:

- All three school districts combined saw a 37.9% increase (Pre: 63.9% vs. Post: 88.1%) in students who thought having 5+ drinks of alcohol once or twice a week posed a moderate or great risk.
- All three school districts combined saw a 16.9% increase (Pre: 72.2% vs. Post: 84.4%) in students who thought smoking marijuana once or twice a week posed a moderate or great risk.
- In one district alone, there was a 67.6% increase (Pre: 48.7% vs. Post: 81.6%) in students who agreed or strongly agreed that students their age risking harming themselves if they use other people's prescriptions or OTC medications.
- Respondents were asked how much they approve of using substances like alcohol, marijuana, and tobacco. Overall, nearly 90% of students already somewhat or strongly disapproved of using these substances at pre-test and this percentage generally remained the same at post-test.
- All three school districts combined saw a 31.4% increase (Pre: 49.1% vs. Post: 64.5%) in students who have talked with their parent about the dangers of tobacco, alcohol, or drug use.

Overview of Community Readiness, Community Priorities, and Opportunities for Prevention and Behavioral Health Promotion

The following information is from the 2021-2022 Circles of San Antonio Community Coalition Needs Assessment:

Community volunteers and partners who represent each of the twelve sectors are integral to the functioning of the Circles of San Antonio Community Coalition. The Coalition's membership reflects the composition of the community in terms of age, ethnicity, religious affiliation, and socioeconomic status. To reach a broad base of community members, the coalition announces monthly coalition meetings at community meetings, on electronic message boards, via social media, and e-mail. All coalition members agree to attend meetings on a regular basis, participate in determining the direction of the coalition, assist in the development of the strategic plan, assist in implementing activities, and serve as ambassadors for the coalition.

Because of the Coalition's strong presence in the community, we have enjoyed particularly strong relationships with local public and private school systems. For example, our fiscal sponsor, SACADA, works closely with our local high schools, collaborating on Red Ribbon Week, and the Coalition helps align the schools with SACADA to ensure direct services are provided consistently. The Coalition also has strong relationships with other direct service prevention and treatment providers beyond SACADA. For example, we have worked closely to align resources with assistance from Family Violence Prevention Services, an organization that provides youth substance use prevention programs with our local school districts. Bexar County Juvenile Probation is also a strong member of our coalition, and we work closely with their youth and families, and they provide consistent data for planning to the Coalition. These organizations, along with our fiscal sponsor SACADA, provide valuable services within the community, expert public speakers, community assessment data and analytical support and input on risk factors and coalition strategies.

The Drug Enforcement Agency oversees two prescription drug take back events each year in collaboration with the Coalition. Furthermore, individuals representing Bexar County DWI Task Force, Texas Department of Transportation, and San Antonio Fighting Back serve on the coalition since its inception. The Texas Alcoholic Beverage Commission and Tobacco Commission (TABC) conducts alcohol sales compliance checks and regularly provides data and information to the coalition. TABC and the coalition are members of the Bexar County DWI Task Force and the San Antonio Police Department Team DWI where information is shared regarding high-risk bars related to patron over service and geo-mapping is used to determine where DWI arrestees state they had just left prior to arrest. This innovative approach to "enforcement as prevention" is just one example of our multi-sector integrated approach to solving our community's substance misuse needs. Parent volunteers host parent focus groups to inform, support and brainstorm youth prevention strategies and regularly update Parent Teacher Association (PTA) groups on coalition activities.

Regional Successes

Since its development, the Prevention Resource Center 8 has been able to secure networks and strong collaboration alliances with diverse local and regional organizations and their key representatives. This combined effort has made it possible for PRC 8 to gain access to a great deal of data and information that only strengthens the information that is already available through national and federal resources. Additionally, these partnerships have successfully enabled PRC 8 to share resources and information relevant to each organization's unique needs.

The Region 8 Epidemiology Workgroup meets quarterly with the purpose of eliminating or reducing substance use/misuse and its related consequences in Bexar and the surrounding counties. The Workgroup is charged with 4 core tasks: Identify drug misuse patterns, changes over time, detect emerging substances, and communicate and disseminate our findings. Workgroup topics have included substance use and mental health during COVID-19, focus group training, focus group planning for recovery clients/coaches/resources, and recruitment and sustainability.

The Region 8 Prevention Resource Center and SACADA's Coalitions closely watch legislation that promotes substance use prevention. The following bills were passed in the most recent legislative session (88th Texas Legislature):

- **HB 6:** This bill aims to increase penalties related to the sale and production of fentanyl by classifying overdoses from the drug as "poisoning", triggering murder charges for those convicted of giving someone a fatal dose of fentanyl.
- **HB 3908:** This bill aims to increase fentanyl prevention and drug poisoning awareness education for public school students in grades 6-12. The bill proposes that each school district annually provide a minimum of 10 hours of research-based instruction on the topic. The instruction required by the bill includes the recognition of signs and symptoms of mental health issues, suicide prevention, the prevention of fentanyl misuse and addiction, awareness of local school and community resources, and health education that includes information about substance use and misuse.
- **SB 1319:** Relates to the reporting of certain overdose information and the mapping of overdoses for public safety purposes. The bill applies to emergency medical services personnel, or a law enforcement agency to enter into a participation agreement for overdose mapping. Overdose mapping is a computerized system designed to map overdoses for one or more controlled substances. It also shows if an opioid antagonist was administered, and if so, it reports the number of doses and the type of delivery. The mapping also reports if an overdose/poisoning was fatal or not fatal.
- **SB 998:** This bill creates a training program covering opioid-related overdose for certain alcoholic beverage permit holders. The training program should cover signs and symptoms of opioid-related drug overdose and the administration of an opioid antagonist (naloxone).
- **HB 4758:** This bill relates to the prohibition of certain e-cigarette products, creating a criminal offense. In the bill, an e-cigarette product is defined as any substance containing nicotine from any source that is intended for use as an e-cigarette. The bill designates that the marketing, advertisement, or sale of an e-cigarette product that depicts a cartoon-like fictional character, imitation or mimicry of a trademark, symbols targeting minors, images of a celebrity, or images resembling food products will be a criminal offense.

- **HB 420:** This bill creates a criminal offense if a person purchases an alcoholic beverage for, or gives an alcoholic beverage to, a minor. A Class A misdemeanor involves a person who purchased an alcoholic beverage or gave an alcoholic beverage to, a minor who then (because of the consumption) caused another person to suffer serious bodily injury or death.

San Antonio Council on Alcohol and Drug Awareness (SACADA) is honored to host four community coalitions in Region 8. Bexar (Circles of San Antonio), Comal, Guadalupe and Kendall Counties have a community coalition that works with community partners to reduce youth substance use related to underage drinking, marijuana, tobacco/nicotine, and non-medical use of prescription drugs using evidence based environmental strategies. The Comal, Guadalupe and Kendall Coalitions were formed in September 2019 with funding from the Texas Health and Human Services Commission. The Circles of San Antonio Community Coalition has an established group with a long record of solid accomplishments, committed members, and several members who have served on the coalition for more than 10 years. Some coalition highlights that benefit the whole region include:

- The Circles of San Antonio Community Coalition graduated the National Coalition Academy this year and that knowledge will be utilized with the other three coalitions.
- The Circles of San Antonio created several training programs, one for the San Antonio Police Department on Underage Drinking and Social Host Ordinance their incumbents and the academy cadets and a Train the trainer program on Vaping for the San Antonio Independent School District.
- Partnership with Alamo Area Council of Governments and Conviva Health and Meals on Wheels that distributed over 4,000 at home Medication Deactivation Bags to local seniors.

For data collection efforts the Circles of San Antonio conducted focus groups with youth about underage drinking and administers surveys at a local school district to gauge youth perceptions about substance use. Coalition members assisting the Texans for Safe and Drug Free Youth by visiting alcohol retailers to determine if high risk alcohol is placed or promoted to youth and reviewed local alcohol-to-go pickup and delivery processes. Information gained was used in our advocacy efforts during the 88th regular legislative session and shared with coalition members.

Coalition coordinators are considered subject matter experts as evident with presenting at local, state, and national conferences.

Comal, Guadalupe, and Kendall County Coalitions continue to build their capacity and are actively recruiting community members to join the fight to reduce youth use of substances. The Circles of San Antonio has three active workgroups community members can join: Marijuana Prevention, Alcohol Policy and the Breathe Clear Coalition which formed in 2019 in partnership with San Antonio Metropolitan Health and has been awarded a grant for 2024. The Guadalupe Coalition is currently focused on tobacco prevention and is partnering with American Heart Association to create healthier communities. Kendall County Behavioral Health Coalition has added substance use as one of its priorities.

The CCP-COVID team at the San Antonio Council on Alcohol and Drug Awareness has partnered with agencies and organizations across the region to promote self-care and mental health following the COVID-19 Pandemic. In Guadalupe County, they partnered with Schertz Neighborhood Services to create a Community Tool Shed that provides the community access to tools and lawn care equipment.

This creates the opportunity for independence to clean and improve their own property or help a neighbor with minor home repairs and projects. Homeowners were receiving citations for overgrown yards and dangerous tree branches. Further research showed that many of the homeowners or potential volunteers did not have lawn equipment to do the work themselves. The tool shed removes that barrier. Neighbors are helping neighbors, building a sense of community and togetherness.

In Comal County, they partnered with Big Brothers Big Sisters who serve young people from age five through young adulthood in one-to-one friendship mentoring. Bigs and Littles hang out 2-3 times a month for a few hours doing normal, everyday activities, like seeing a movie, doing homework, playing games, going out to eat, and just hanging out. SACADA provides funding to increase outreach, advertisement and enhanced recruitment events supporting 20 new matches after the challenges of the pandemic.

In Kendall County, they partnered with the Alamo Resource Conservation & Development Area Inc. to promote agriculture/gardening and increasing quality of life. This garden project consisted of families planning, preparing for planting and harvesting for a full year of growing seasons. Youth and their families engaged in service-learning activities centered on home and community gardening. In addition to learning gardening skills, the activities incorporated building leadership skills and instilled an appreciation for the natural environment and agriculture.

Lastly, in Wilcon County, the CCP-COVID team partnered with the Oak Hills Community Church to create Mathew's Closet. Clothing and other necessities are provided and referrals to other services are facilitated as needed. Improvements to the building included adding a much-needed ramp for accessibility that was completed by volunteers.

Our Mental Health Awareness Training has made strides to provide Mental Health First Aid (MHFA) and Youth Mental Health First Aid (YMHFA) training to school personnel, emergency first responders, law enforcement, and other community members who can provide referrals to mental health services. Our population of focus for which the training is intended to help is school-age youth, adults with serious mental illness/disturbance, and the public. During the 2022 Fiscal Year, there were 318 individuals trained in Adult MHFA and Youth MHFA combined.

Gaps in Data

There are still data gaps in county-level data collection efforts across the region. Yet, as efforts are made to unify the counties for data collection, the need to gather data in Spanish is also relevant. A growing issue in Region 8 is the language barrier. Not all service providers can help the Spanish-speaking population, this becomes more apparent in rural areas where services are already limited.

A significant source of surveying across the region is conducted through the Public Policy Research Institute with the use of the Texas School Survey. For the most part, drug and alcohol data collected from adolescents throughout the region is short of rich and detailed regional assessment, especially at the county-level. There are several coalitions assessing their community needs, but data outcomes are not representative of the region. Community-level data reporting can be collected for our evaluation and study of variables and factors at work, but more region-wide data collection is necessary. As a result, existing data is currently the only feasible way to begin assessing and estimating the effects of alcohol, marijuana, and prescription drugs in the region. Therefore, continued encouragement and support for community-level efforts in the region is needed. Further community-level activity is necessary to translate community-level data to a regional-level assessment. What community-level data can do by expanding their efforts is to begin developing county-level assessment and relational connections to neighboring counties.

The evaluation of certain seasonal occurrences is also necessary to assess. For instance, among marijuana users time related to the numerical value of 420 is commonly used as when to conduct marijuana activity. The numerical value 420 can mean April 20th as the day for marijuana use or the time 4:20pm or 4:20am. Also, the term “420 friendly” is sometimes used in online social media settings as an indication of being open to marijuana use. Additionally, alcohol use is generally seen to increase during holidays (e.g., New Year’s Eve). However, measures are needed to observe spikes in alcohol and substance misuse to deter instances in the following year.

The national, state, and local statistics are breathtaking in their wealth of information; however, they are not consistent, and some research is contradictory or outdated. Regardless of the data gaps, Region 8 will provide data at a national, state, and local level per request that fulfill its requirements, from all the various systems; data can be analyzed with or without interpretation from the available resource with clear evidence drawn from reputable sources if requested as well.

Gaps in Services

Rural areas of the region must travel outside their community because services are not available in their county. There are also limited organizations that provide substance use prevention education and must rely on the Prevention Resource Center for these types of services. There is a lack of community awareness and participation in prevention activities from both schools and the community.

Other gaps include the budget shortfalls with school districts and the lack of participation in the Texas School Survey. Since the schools are working with less, there is more of a demand for PRC Region 8 services including literature, community outreach and presentations.

Health Professional Shortage Areas (HPSAs) are designations that indicate health care provider shortages in primary care, dental health, or mental health. These shortages may be geographic-, population-, or facility-based.

Region 8 Mental Health Shortage Designations:

- 14 counties are designated as having Mental Health Geographic HPSA shortages.
- 2 Health centers that provide primary care to an underserved area or population, offer a sliding fee scale, provide comprehensive services, have an ongoing quality assurance program, and have a governing board of directors. Health Centers include Atascosa Healthcare and South Texas Rural Health Services.
- 6 Counties designated as High Needs Geographic HPSA areas include Bexar, DeWitt, Dimmit, Frio, Maverick, and Zavala County.

Region 8 Primary Care Shortage Designations:

- 5 counties are designated as having primary care shortages including Atascosa, Wilson, Frio, Bandera, and Goliad.
- 8 counties designated as High Needs Geographic areas including Zavala, Real, Dimmit, Karnes, Uvalde, Val Verde, La Salle, Kinney, and Northwest Bexar.
- The Kickapoo Tribe of Texas is designated as Native American, Tribal Facility, Population.
- The Children's Clinic of Dimmit and Zavala, Rural Health Clinic.

Putting it all Together

Completion of this Regional Needs Assessment has allowed for identification of some of the major challenges that the communities in Region 8 face regarding adolescent drug use and the need for more prevention programs to service the area.

The table below outlines prevention priorities based on available quantitative data and qualitative data:

Substance	Youth	National Cost
Alcohol	#1 – Consumption Rates, Mortality	Alcohol: \$27 billion in health care expenses, \$249 billion overall
Marijuana	#2 – Consumption Rates, Youth Perception, Arrests	Illicit drugs: \$11 billion in health care expenses, \$193 billion overall
Tobacco	#3 – Consumption Rates	Tobacco: \$168 billion in health care expenses, \$300 billion overall

Region 8 Findings:

The RNA has identified alcohol, tobacco, and marijuana as the most prevalent substances in terms of use and misuse patterns. Current use rates show that alcohol ranks highest in usage among youth, with tobacco and marijuana following closely behind, but historically, Tobacco has lead for lifetime use. Notably, marijuana seizures and related items accounted for the highest drug seizures in Texas and the Region 8 area, indicating a shift in consumption patterns. In 2023, marijuana surpassed tobacco in usage, whereas tobacco had previously led in consumption rates.

Texas School Survey (TSS) data indicates that as children grow older, their exposure to and awareness of substance use increases. Twelfth graders are three times more likely than seventh graders to perceive alcohol as easily accessible. Factors such as peer influence, child maltreatment, lack of family support, safety concerns at home, perceptions of substance harm, and inadequate school or social support are associated with substance use and misuse in the area.

In 2023, Region 8 reported a child maltreatment rate of 9 victims per 1000, higher than the state average of 8 victims per 1000. Behavioral health disparities identified by the RNA include depression among both adults and children. Disparities in access to mental health providers are evident between smaller and larger metropolitan areas, with regions like Bexar County having significantly higher provider rates compared to more rural counties like Atascosa.

In Texas, the overall rate of Mental Health Providers (MHP) is 156.712 per 100,000 population, while Bexar County boasts a higher rate of 232.23 per 100,000. Conversely, rural counties such as Atascosa have a substantially lower MHP rate of 55.05 per 100,000. Lack of insurance correlates with reduced access to mental health services, particularly in socioeconomically disadvantaged areas.

Protective factors linked to improved behavioral health outcomes include strong social networks, insurance coverage, and increased access to mental health services. A higher perception of substance harm also serves as a protective factor. In 2022, 54.5% of students in Region 8 perceived marijuana as very dangerous, compared to 60.1% statewide in Texas.

Areas with higher socioeconomic status exhibit protective effects, often correlating with greater access to mental health resources. Improved behavioral health outcomes are associated with lower rates of child maltreatment and participation in extracurricular activities. Student survey data from 2022 in Region 8 indicated that 55.1% of students across all grades would confide in another adult if they had a substance use disorder (SUD).

Glossary of Terms and Definitions

<p>ACEs</p>	<p>Adverse Childhood Experiences. Potentially traumatic events that occur in childhood (0-17 years) such as experiencing violence, abuse, or neglect; witnessing violence in the home; and having a family member live through a suicide attempt or die by suicide. Also included are aspects of the child’s environment that can undermine their sense of safety, stability, and bonding such as growing up in a household with substance use, mental health problems, or instability due to parental separation or incarceration of a parent, sibling, or other member of the household.</p> <p>May also refer to adverse <i>community</i> experiences such as concentrated poverty, segregation from opportunity, and community violence. All these conditions and experiences contribute to community trauma, which can exacerbate the negative impacts of adverse childhood experiences (ACEs) that individuals experience.</p> <p>Please see the beginning of the report for more information on ACEs.</p>
<p>Adolescent</p>	<p>An individual ranging between the ages of 10 and 20 years depending on what health organization you reference. For a more in-depth description and definition, see the “Adolescence” section in “Key Concepts” in the beginning of the RNA.</p>
<p>ATOD</p>	<p>Acronym for alcohol, tobacco, and other drugs.</p>
<p>Binge Drinking</p>	<p>Defined as consuming 5 or more drinks on an occasion for men, and 4 or more drinks for women on an occasion for women.</p>
<p>BRFSS</p>	<p>Behavioral Risk Factor Surveillance System. Health-related telephone survey that collects state data about U.S. residents regarding their health-related behaviors, chronic health conditions, and use of preventive services.</p>

Counterfeit Drug	A medication or pharmaceutical item which is fraudulently produced and/or mislabeled then sold with the intent to deceptively represent its origin, authenticity, or effectiveness. Counterfeit drugs include drugs that contain no active pharmaceutical ingredient (API), an incorrect amount of API, an inferior-quality API, a wrong API, contaminants, or repackaged expired products. An example of this can be any drug that is marketed as a specific product but contains illegally manufactured fentanyl.
DSHS	The Texas Department of State Health Services. The agency's mission is to improve the health, safety, and well-being of Texans through good stewardship of public resources and a focus on core public health functions.
Drug	A medicine or other substance which has a physiological and/or psychological effect when ingested or otherwise introduced into the body. Drugs can affect how the brain and the rest of the body work and cause changes in mood, awareness, thoughts, feelings, or behavior.
Evaluation	Systematic application of scientific and statistical procedures for measuring program conceptualization, design, implementation, and utility, making comparisons based on these measurements, and the use of the resulting information to optimize program outcomes. The primary purpose is to gain insight to assist in future change.
HHS	The United States Health and Human Services. The mission of the U.S. Department of Health and Human Services is to enhance the health and well-being of all Americans, by providing for effective health and human services and by fostering sound, sustained advances in the sciences underlying medicine, public health, and social services.
Incidence	The proportion, rate, or frequency of new occurrences of a disease, crime, or something else undesirable. In the case of substance use, it is a measure of the risk for new substance use behaviors and new substance use disorder cases within a community.

LGBTQIA+	An inclusive term referring to people of marginalized gender identities and sexual orientations and their allies. Examples include lesbian, gay, bisexual, transgender, non-binary, genderqueer, questioning, queer, intersex, asexual, demisexual, and pansexual.
Justice-Impacted	Justice-impacted individuals include those who have been incarcerated or detained in a prison, immigration detention center, local jail, juvenile detention center, or any other carceral setting, those who have been convicted but not incarcerated, those who have been charged but not convicted, and those who have been arrested.
MAT/MOUD	Medication-Assisted Treatment/Medications for Opioid Use Disorder. The use of medications, in combination with counseling and behavioral therapies, to provide a “whole patient” approach to the treatment of substance use disorders.
Neurotoxin	Synthetic or naturally occurring substances that damage, destroy, or impair nerve tissue and the function of the nervous system. They inhibit communication between neurons across a synapse.
PCEs	Positive Childhood Experiences. Experiences during childhood that promote safe, stable, and nurturing relationships and environments. PCEs can help children develop a sense of belonging, connectedness, and build resilience.
Person-Centered Language or Person-First Language	<p>Language that puts people first. A person’s identity and self-image are closely linked to the words used to describe them. Using person-centered language is about respecting the dignity, worth, unique qualities, and strengths of every individual. It reinforces the idea that people are more than their substance use disorder, mental illness, or disability.</p> <p>Please note: some people do prefer the use of language that is not person-centered to self-identify, e.g., in Alcoholics Anonymous (AA) and Narcotics Anonymous (NA), some people prefer to self-identify as an “addict” rather than a “person with addiction” even though this is not person-centered language. It is best practice to use the language that a person asks you to use when referring to them.</p>

PRC	Prevention Resource Center. Prevention Resource Centers provide information about substance use to the general community and help track substance use problems. They provide trainings, support community programs and tobacco prevention activities, and connect people with community resources related to substance use. The beginning of the RNA includes significantly more details on the purpose and functions of the PRCs.
Prevalence	The current proportion, rate, or frequency of a disease, crime, or other event or health state with a given community. In the case of substance use, it refers to the current rates of substance use, and the current rate of substance use disorders within a given community.
Protective Factor	Conditions or attributes (skills, strengths, resources, supports or coping strategies) in individuals, families, communities, or the larger society that help people deal more effectively with stressful events and mitigate or eliminate risk for mental health challenges and substance use in families and communities.
Recovery	A process of change through which individuals struggling with behavioral health challenges improve their health and wellness, live a self-directed life, and strive to reach their full potential.
Risk Factor	Conditions, behaviors, or attributes in individuals, families, communities, or the larger society that contribute to or increase the risk for mental health challenges and substance use in families and communities.
Self-Directed Violence	Anything a person does intentionally that can cause injury to self, including death.
SPF	Strategic Prevention Framework. SPF is a model created by the Substance Abuse and Mental Health Services Administration (SAMHSA) to assist communities with implementing effective plans to prevent substance use. The idea behind the SPF is to use findings from public health research and community assessment, such as this RNA, along with evidence-based prevention programs to build a robust and sustainable prevention system. This, in turn, promotes resilience and decreases risk factors in individuals, families, and communities. More information can be found here: https://www.samhsa.gov/sites/default/files/20190620-samhsa-strategic-prevention-framework-guide.pdf

Stigma	The stigma of substance use—the mark of disgrace or infamy associated with the disease—stems from behavioral symptoms and aspects of substance use disorder. The concept of stigma describes the powerful, negative perceptions commonly associated with substance use and misuse. Stigma has the potential to negatively affect a person’s self-esteem, damage relationships with loved ones, and prevent those suffering from substance use and misuse from accessing treatment.
SDOH	Social Determinants of Health. These refer to the conditions in the environments where people are born, live, learn, work, play, worship, and age that affect a wide range of health, functioning, and quality-of-life outcomes and risks. See the beginning of the RNA for more details.
Substance Abuse	When substance use adversely affects the health of an individual or when the use of a substance imposes social and personal costs. <u>Please note:</u> This is an antiquated term that should be avoided as it contributes to the stigma surrounding substance use and substance use disorders. The term “abuse” has been found to have a high association with negative judgments and punishment and can prevent people seeking treatment. More information can be found here: https://nida.nih.gov/research-topics/addiction-science/words-matter-preferred-language-talking-about-addiction
Substance Dependence	An adaptive biological and psychological state that develops from repeated drug administration, and which results in withdrawal upon cessation of substance use.
Substance Misuse or Non-Medical Substance Use	The use of a substance for a purpose not consistent with legal or medical guidelines. This term often describes the use of a prescription drug in a way that varies from the medical direction, such as taking more than the prescribed amount of a drug or using someone else's prescribed drug for medical or recreational use.

Substance Use	The consumption of any drugs such as prescription medications, alcohol, tobacco, and other illicit drugs. Substance use is an inclusive, umbrella term that includes everything from an occasional glass of wine with dinner or the legal use of prescription medication as directed by a doctor all the way to use that causes harm and becomes a substance use disorder (SUD).
SUD	Substance Use Disorder. A condition in which there is uncontrolled use of a substance despite harmful consequences. SUDs occur when the recurrent use of alcohol and/or drugs causes clinically significant impairment, including health problems, disability, and failure to meet major responsibilities at work, school, or home.
Telehealth	The use of electronic information and telecommunications technologies to support and promote long-distance clinical health care, patient and professional health-related education, public health, and health administration. Technologies include videoconferencing, the internet, store-and-forward imaging, streaming media, and terrestrial and wireless communications.
TCS	Texas College Survey of Substance Use. A survey that collects self-reported data related to alcohol and drug use, mental health status, risk behaviors, and perceived attitudes and beliefs among college students in Texas. More information on the TCS can be found in the beginning of the RNA.
TSS	Texas School Survey of Drug and Alcohol Use. A survey that collects self-reported data on tobacco, alcohol, and other substance use among students in grades 7 through 12 in Texas public schools. More information on TSS can be found in the beginning of the RNA.
YRBSS	Youth Risk Behavior Surveillance Survey. an American biennial survey of adolescent health risk and health protective behaviors such as smoking, drinking, drug use, diet, and physical activity conducted by the Centers for Disease Control and Prevention. It surveys students in grades 9–12.
